(8) Steam Trawler Landings on the Atlantic Coast, 1934 and 1935 ... 224

PREFACE

This Report is issued under an arrangement for statistical co-operation between the Dominion Bureau of Statistics and the Government departments having jurisdiction with regard to fisheries throughout Canada. These departments comprise: The Dominion Fisheries Department which exercises jurisdiction over the fisheries of the Maritime provinces, Yukon, British Columbia and the Magdalen Islands, and the Fisheries Branches of departments of Ontario, Quebec, Manitoba, Saskatchewan and Alberta which have jurisdiction over the fisheries of their respective provinces, excepting in the case of Quebec, the fisheries of the Magdalen Islands. The province of British Columbia has a Fisheries Branch, but it does not engage in independent statistical work.

Under the arrangement above referred to, the statistics of the catch, and of the products marketed in a fresh state or domestically prepared, are collected by the local fisheries officers, checked in the Department of Fisheries, and co-ordinated and compiled in the Dominion Bureau of Statistics. In the case of manufactured fish products, schedules in conformity with those of other sections of the Census of Industry are sent by the Bureau to the operators of canneries, fish-curing establishments, etc., the fisheries officers assisting in securing an expeditious and accurate return. The grateful acknowledgments of the Bureau are tendered to the officers of the provincial governments who co-operate in these arrangements.

R. H. COATS,
Dominion Statistician.

DOMINION BUREAU OF STATISTICS,
OTTAWA, August 14, 1936.

23705—1½

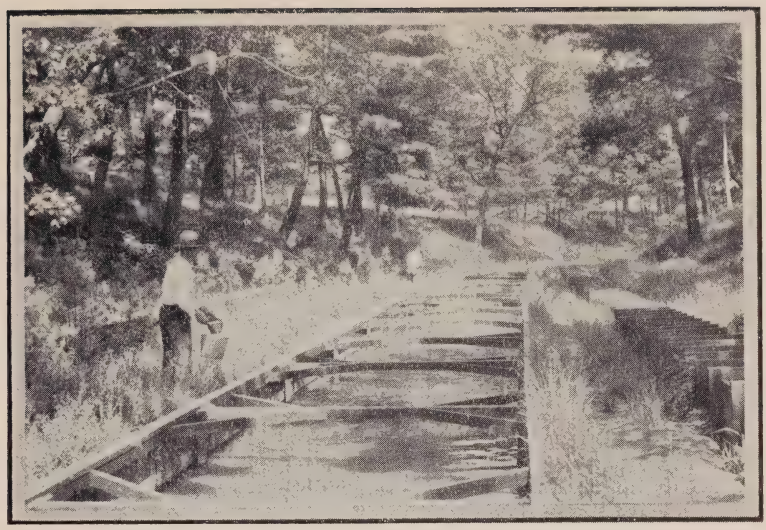

THE FISHERIES OF CANADA

The Early Fisheries.—*Fishing is one of the earliest and most historic industries of Canada. Leaving aside inconclusive evidence in favour of authentic records, one must ascribe to Cabot the honour of having discovered, in 1497, the cod banks of Newfoundland, when he first sighted the mainland of North America. He reported that the sea was so covered with fish that they could be caught "with baskets, a stone being attached to make the basket sink in the water." Cape Breton, one of the oldest place-names in America, is a memorial of the early French fishermen —and the Spaniards and the Portuguese were but little behind. Fernandez de Navarette mentions all three as frequenters of the "Grand Banks" before 1502. The fishing was by hand lines over barrels made fast to the bulwarks to prevent fouling, the vessels remaining during fine weather, then returning to France with from 30,000 to 50,000 cod. Voyages along the coast soon showed the cod as plentiful inshore as on the outer banks, and it became common for a crew to anchor in a bay, erect a hut on shore, and make daily excursions to the fishing grounds—the product being salted and dried on land and at the end of the season shipped to France. Jacques Cartier, when he went up the St. Lawrence in 1534, found traces everywhere of these early "Captains Courageous" and of their rivalries in arms no less than in the capture of the teeming product which had tempted them so far from home. An establishment of the kind mentioned was founded at Tadoussac by Chauvin in 1599. Soon the fishermen began to stay all winter and thus to erect permanent fishing settlements. The first grant of the fisheries of Canada was made by the King of France to de Monts in 1603. Fishing, therefore, may well be regarded as the first industry to be systematically prosecuted by Europeans in what is to-day the Dominion of Canada. It has never since ceased to yield a perennial harvest.*

By the Treaty of Utrecht in 1713, Britain became the owner of Newfoundland and excluded France from fishing and drying fish on certain sections of the coast, but France retained the fisheries of Cape Breton and the Gulf. The Seven Years' War (1756-1763) put a stop to continuous fishing. At its close the Robin family of Jersey came to Canada, and gradually acquired the former French fishing stations. Until the arrival of the Loyalists all other fishing but cod was neglected. Inshore fisheries alone (including those of the Labrador coast) were developed during this phase; no deep-sea fishing vessel put out from Lunenburg, now the chief centre of the deep-sea fishery, until 1873.

The Canadian Fishing Grounds.—*Canada's fishing grounds are perhaps the most extensive in the world. On the Atlantic, from Grand Manan to Labrador, the coast line, not including the lesser bays and indentations, measures over 5,000 miles. The bay of Fundy, 8,000 square miles in extent, the gulf of St. Lawrence, fully ten times that size, and other ocean waters comprise not less than 200,000, square miles or over four-fifths of the area of the fishing grounds of the North Atlantic. In addition there are on the Atlantic seaboard 15,000 square miles of inshore waters controlled entirely by the Dominion. Large as are these areas they represent only a part of the fishing grounds of Canada. The Pacific coast of the Dominion measures 7,180 miles in length and is exceptionally well sheltered, whilst throughout the interior is a series of lakes which together contain more than half of the fresh water on the planet, Canada's share of the Great Lakes alone amounting to over 34,000 square miles, a total which of course does not include lake Winnipeg (9,457 square miles), lake Manitoba, and others of even greater area.*

Still more important than the extent of the Canadian fishing grounds is the quality of their product. It is an axiom among authorities that food fishes improve in proportion to the purity and coldness of the waters in which they are taken.

Judged by this standard, the Canadian cod, halibut, herring, mackerel, whitefish and salmon are the peers of any in the world. It is possible, therefore, to state that by far the most valuable fisheries of the western hemisphere, if not of the globe, belong to Canada.

It will be seen from the foregoing that it is impossible to deal with the Canadian fisheries in the aggregate; they are those of a continent rather than of a country, and are of corresponding diversity. Omitting the Hudson Bay and peri-Arctic region, which extends from Ungava to Alaska, there are roughly the following divisions of the Canadian fisheries:

1. Atlantic Fisheries.—*These were the first Canadian fisheries in point of time and until 1918 they remained the most important for aggregate value of product. Cod, halibut, haddock, herring, mackerel, smelt, sardine, lobster and oyster fisheries are included. The estuarian and inland waters of the Maritime provinces and of Quebec are sometimes considered as distinct; if they are added, the list of products would embrace the salmon, the shad, the alewife, the smelt, the striped bass, the tom cod, and the maskinongé. Conditions are fairly uniform throughout these fisheries, which are commonly divided into the inshore and deep-sea fisheries. The inshore or coastal fishery is carried on in small boats usually motor driven, with crews of two or three men, and in a class of small vessels with crews of from four to seven men. The means of capture employed by boat fishermen are gill nets and hooks and lines, both hand lines and trawls; whilst from the shore are operated trap nets, haul seines and weirs. Haddock as well as cod is a staple product; during the spring and summer it is split and salted but the important season comes with the autumn, when the fish are shipped fresh or smoked. The deep-sea fisheries are worked by vessels of from 40 to 100 tons, carrying from twelve to twenty men operating mainly with trawl lines from dories, although some fishing is done directly from the vessels by means of hand lines. The fleets operate on the various fishing banks, such as Grand Bank, Middle Ground and Banquereau. The vessels, built in the home shipyards, remain at sea, sometimes for months at a time, and in the hands of sailors who have no superior, seldom come to grief. When they return, the fish, which have been split and salted on board, are taken on shore and washed and dried. The West Indies provide the chief market for this product; no cod fish in the world stands the tropical climate like that cured by the fishermen of the Maritime provinces. Steam trawling as it is carried on in the North Sea was introduced on the Atlantic coast of Canada a number of years ago. The trawlers operate practically the whole year and their catches are utilized entirely for the fresh fish trade. Under the Fisheries Act, trawlers must be registered as British ships in Canada, owned in Canada and licensed by the Minister of Fisheries, and their operations must be restricted to waters at least 12 miles from shore.*

Lobstering operations, which commenced about 1870, provide another distinctive industry. In that year there were three lobster canneries on the Atlantic coast of Canada; in 1935 the canneries numbered 304 and gave work to more than 6,000 people; 30,000,000 lobsters is a normal catch. The difficulty of enforcing regulations prohibiting the capture of undersized and spawning lobsters offers a constant problem in connection with the output, but with the co-operation of the fishermen themselves the fishery may be maintained and the annual harvest show no decline. In New Brunswick the canning of sardines, which are young herrings and not a distinct type of fish, is comparable in importance to the lobster industry, exceeding it in value in occasional years. Oysters, whose early abundance was for a number of years greatly diminished, are now increasing in annual yield, owing to the development by the Government of oyster farming; favourable areas in Prince Edward Island waters have been seeded, and the work in connection with the oyster culture is being carried on under the direction of experts.

The fishing population of the Maritime provinces is a specialized and stable industrial class. The coast-wise fisheries are operated from April to November, or to January in sheltered districts; and though the larger vessels work all winter,

several thousand men are available for a time each year for other employment. This they find about the small plots of land which the most of them own or occupy, in the lumber camps of New Brunswick, or in the collieries of Nova Scotia. A few from Lunenburg and other centres engage in the West Indian trade. Apart from restrictions of weather and close seasons, the prevailing method of paying the men on shares has a further tendency in years of low catches or prices to drive them into secondary occupations.

2. Inland Fisheries.—*The Great Lakes and tributary waters of the St. Lawrence are a second great division of the Canadian fisheries. The value of the inland fisheries of Quebec lies chiefly in the output of the eel, doré (pickerel), and sturgeon fisheries. In Ontario, whitefish, trout, pickerel and lake herring are the most important commercial fishes, though pike, sturgeon and coarse fish yield a fair return. The season on the Great Lakes lasts from six to eight months, and though fishing through the ice is followed by many a large number depend on miscellaneous employment between the seasons. Moving westward, lake Winnipeg, lake Winnipegosis, lake Manitoba and the smaller lakes to the north and east furnish most of the fish products of Manitoba. Whitefish and pickerel are the chief products, but pike, tullibee, goldeye and many other varieties are found. In Saskatchewan and Alberta commercial fishing is confined to the regions north of the Saskatchewan river, where whitefish in large quantities are taken. The difficulties in connection with transportation have not yet been surmounted; some of the greatest lakes of the continent—Reindeer, Great Slave, Great Bear—and hundreds of smaller bodies of water are still beyond reach from a marketing point of view. The lakes of the west, however, repeating the part which the St. Lawrence played in the days of the French regime, and the cod banks in the history of New England, have assisted greatly in the settlement of the country by providing a much needed food supply for early arrivals.*

3. Pacific Fisheries.—*In British Columbia there is an interior fishing region which corresponds in the main to the prairie section; in the early history of the province it is doubtful if the fur trade (which opened the door by way of the Rocky Mountains to later enterprise) could have established its footing but for these fisheries. The great wealth of British Columbia, however, in this respect—the source from which she contributes approximately two-fifths of the marketed value of the fish products of Canada and has built up a trade which reaches to the ends of the earth—is in the estuarian salmon fisheries of the Fraser, the Skeena, the Nass, and other rivers of the Pacific slope. Every species of this king of food fishes known to the waters of the Pacific (which, however, is not the salmo salar or true salmon) is to be found on the British Columbia coast—the sockeye, the spring, the cohoe, the pink and the chum salmon. Of these, the sockeye, though not taken in such great numbers as the pink and chum species, is by far the most important, owing to its prevailing deep red colour and excellent texture, which have created so keen a demand for it in British and foreign markets. On the Fraser river, which used to be the chief source of supply, but which has now yielded place to the Skeena and other northern waters, the yield varies to a considerable extent from year to year. The run begins late in July and is at its height in the opening weeks of August, though the northern rivers have a somewhat earlier season. The spring or quinnat salmon is a much larger fish; it was the first species used in the United States for canning. The run begins early in the spring and continues until the end of July. The cohoes are smaller, running like the sockeye, in schools, during September and October on the Fraser and earlier on the northern streams. The chum salmon is canned and a considerable quantity also is salted for export to the Orient. The run of pink salmon comes about three or four weeks later than that of the sockeye. Many of the employees in the salmon fishery are Chinese, Japanese and Indians, the Chinese finding work mainly in the canneries and the Indians and Japanese in the fishing operations.*

Halibut abounds off Vancouver island and between the Queen Charlotte Islands and the mainland, and though the first endeavour to establish an industry was unsuccessful, by 1903 British Columbia supplied 10,000,000 pounds of 25,000,000 pounds taken on the whole Pacific coast north of California. The former figure has since, in many years, been trebled, although after 1930 the catch lessened owing to the restrictions imposed under the provisions of the Treaty signed by Canada and the United States for the conservation of this fishery. The annual catch of herring in British Columbia represents about 56 per cent of the total catch of sea herring for the Dominion, and nearly the whole of it is dry-salted for export to China and Japan. The pilchard fishery has become of importance in recent years, the greater part of the catch being used in the manufacture of oil and meal, of which large quantities are produced annually. There is also the whale fishery, which has two stations on the Queen Charlotte Islands. The catch includes whales of many kinds —sulphur bottom, finback, humpback and sperm. Whale hunting is carried on in boats with Svend Foyn harpoon guns—a method which was introduced from Norway. Every scrap of the whale is used—oil, meal and fertilizer are its more important products. Black and ling cod, oulachon, flounders, skate, soles, clams and oysters are also abundant in British Columbia waters.

A word might be added with regard to the Canadian fur-seal fisheries of the Pacific, whose historic headquarters were the city of Victoria. Early in the present century the industry had, owing to the scarcity of the animals, been reduced to small proportions, and in 1911 a treaty was arranged between Great Britain, the United States, Japan and Russia, under the terms of which pelagic or open-sea fishing is prohibited. This treaty, still in effect, has for its object the conservation of the seals and it has resulted in greatly increasing the size of the herds. As compensation for the suspension of her sealing rights Canada receives annually from the Governments of the United States, Japan and Russia a share of the proceeds of the sealing on the Pribaloff Islands and other rookeries owned by the respective countries. The Indians of British Columbia are exempt from the provisions of the Treaty, but their hunting must be carried on from open boats, manned by not more than five persons each and without the use of firearms.

Game Fish.—*The above is a purely industrial and commercial survey. Fishing for sport, however, has its economic side in a country of such famous game fish as the salmon of the Restigouche and other rivers of the Maritime provinces, the black bass and speckled trout of the Quebec and Ontario highlands, the red trout of the Nipigon and the salmon and rainbow trout of British Columbia. A considerable public revenue is derived from the leasing of waters in sparsely settled districts to clubs and individuals for sporting purposes. Several hundreds of guides find employment here during the summer months.*

The Government and the Fisheries.—*At Confederation, the administration of the Canadian fisheries and marine was placed in the charge of a department of the Dominion Government which then exercised complete jurisdiction over the fisheries, under the supervision of a Cabinet Minister, with a large staff of inspectors, overseers and guardians to enforce the fishery laws.*

Up to 1930 the one department continued in control of both the marine and the fisheries, but in that year the work was divided and a department of fisheries, in charge of a cabinet minister, was created, to administer the fisheries of the Dominion.

In 1882, 1898, 1913 and 1920 decisions in the courts considerably altered the status of jurisdiction as between the Dominion and the provinces, and further changes were effected in 1922, when the Dominion Government transferred to the province of Quebec the administration of the fisheries of that province, with the exception of the fisheries of the Magdalen Islands; and again in 1930 when the fisheries of Manitoba, Saskatchewan and Alberta were transferred, with the other natural resources, to the Governments of those provinces. To-day the Dominion controls the

tidal fisheries of the Maritime provinces and British Columbia and the fisheries of the Magdalen Islands in Quebec province. The non-tidal fisheries of the Maritime provinces, Ontario and the Prairie provinces, and both the tidal and non-tidal fisheries of Quebec (excepting the Magdalen Islands) are controlled by the respective provinces, but the right of fisheries legislation for all provinces rests with the Dominion government. The expenditure of the Dominion on the Fisheries in the fiscal year ended March 31, 1936, was $1,710,345, and its revenue $167,862.

Conservation.—*River and lake fisheries certainly, and sea fisheries probably, if left to themselves, conform to the economic law of diminishing returns. The Canadian government, accordingly, has had for a main object the prevention of depletion, the enforcement of close seasons, the forbidding of obstructions and pollutions, and the regulation of nets, gear and of fishing operations generally. In addition, an extensive system of fish culture has been organized; in 1935 the Dominion operated 23 main hatcheries, 11 subsidiary hatcheries, 9 salmon retaining ponds and several egg collecting camps at a cost of $231,037, and distributed 145,878,304 salmon and trout eggs, fry and older fish. The young fish are distributed gratis if the waters in which they are to be placed are suitable and are open to public fishing.*

Scientific Research.—*Stations under the direction of the Biological Board of Canada for the conduct of biological research into the numerous complex problems furnished by the fisheries are established at Halifax, N.S., St. Andrews, N.B., and Nanaimo and Prince Rupert, B.C. The biological stations at St. Andrews and Nanaimo are concerned chiefly with problems of fish life, while at the fisheries experimental stations at Halifax and Prince Rupert, attention is devoted to the practical problems of the fishing industry. A marine biological station, mainly for oyster investigation work, is conducted at Ellerslie, P.E.I., and a sub-station for salmon investigations at Cultus Lake, B.C. The Biological Board employs a permanent staff of scientists, and in addition voluntary research workers are drawn from various Canadian universities from time to time as required, chiefly professors and trained scientists. The life-histories of edible fishes, the bacteriology of fresh and cured fish, improved methods of handling and preparing fish, and numerous other practical problems have been taken up and scientific memoirs and reports issued.*

Direct Assistance.—*In the field of direct assistance, apart from the fishing bounty payments, which are referred to in another paragraph, the government has taken various steps from time to time. Beginning in 1927 fish collection services were operated on several stretches of the Atlantic coast by the Department of Fisheries. These services, which have since been discontinued, were operated to extend the areas in which the facilities of the fresh fish markets were open to the fishermen. For several seasons, also, a lobster transportation service was operated, under departmental arrangement, between eastern Nova Scotia and Massachusetts, in order to develop the live lobster business in Nova Scotia districts where, because of inadequate transportation facilities, it had not previously been carried on successfully on any large scale. The service demonstrated the feasibility of such shipment commercially from eastern Nova Scotia and has led to the establishment of privately operated services.*

As another step to assist the fishermen a system has been established of broadcasting radio reports as to weather probabilities, bait and ice supplies, and ice conditions along the coast. During most of the season these radio reports are broadcast twice daily from Halifax and Louisburg, and the weather reports are also broadcast from Saint John. As most of the fishing vessels are now equipped with radio receiving sets this service has proved of much value. Telegraphic information as to bait supplies on the coast is also made available daily by the Department of Fisheries in a number of fishing ports during spring and summer months.

In addition to the educational work carried on by the permanent inspectors of the Department of Fisheries in instructing the fishermen in various areas as to the best method of handling and processing their catches, special instructors have been placed in the field in certain districts to demonstrate particular processing methods. Courses and lectures for fishermen and lobster cannery managers and foremen have also been given at stations conducted by the Biological Board.

The Government also employs an expert in fish cookery, who visits the larger centres to lecture on the food values of fish and to give demonstrations of the various ways of preparing it for the table.

To prevent poaching and to assist in the proper enforcement of fisheries regulations a fleet of vessels patrols the coastal and inland waters. Scientific research and experimentation on behalf of the fishing industry have been carried on for some years at government scientific stations. Reference to this phase of effort on behalf of the industry is made in the paragraph dealing with scientific research on the preceding page.

International Problems.—*So rich a fishing area as the north Atlantic could not fail to attract other countries, and old customs became elevated into rights, some of which have lasted until the present. The French shore is a Newfoundland question, now a sentimental one entirely. Very different is the question of the rights of the United States, whose fishermen in the colonial period provided the chief food supply for New England and who were granted by the Treaty of Versailles, 1783, a specific liberty to a share of the Canadian inshore fisheries. Losing this by the war of 1812, the United States after 1818 surrendered all but their liberty to call at Canadian ports for shelter, wood or water, or to make repairs, and to fish around the Magdalen Islands and on the north shore of the Gulf of St. Lawrence from Point Joli eastward, and to dry and cure their fish in any of the unsettled bays, harbours and creeks on this portion of the north shore. In the years 1854-1866, the Reciprocity Treaty set at rest for the time questions of interpretations to be placed on certain parts of the Treaty of 1818. The former Treaty provided for the admission into either country duty free, of the fish and fish products of the other, and United States fishermen were allowed to fish in Canadian Atlantic territorial waters and Canadian fishermen in certain United States territorial waters on that coast with the exception in either instance of rivers and mouths of rivers, and for shell fish. In 1871, the Treaty of Washington revived the fishery provisions of the Reciprocity Treaty of 1854, and provided for the appointment of a commission to determine the amount of compensation to be paid by the United States to Great Britain as the difference in the value of the concessions mutually granted. This commission sat in Halifax in 1877, and its findings have since been known as the "Halifax Award." The amount of the award was $5,500,000, of which $1,000,000 was apportioned to Newfoundland. In 1885, however, the United States terminated the fisheries articles of this Treaty, and a period of disagreement between the countries followed. A settlement was negotiated in 1888 when the plenipotentiaries appointed by the two nations agreed to what since has been known as the "Unratified Treaty of 1888," under the terms of which United States fishing vessels were to be granted, without fee, annual licences authorizing them to purchase in Canadian ports provisions and outfits, to tranship their catches and to ship crews. Out of this treaty grew the so-called modus vivendi licences. The treaty makers recognized that the treaty could not receive the sanction of the governments of the countries concerned before the commencement of the fishing season, and, as a temporary arrangement to last not longer than two years it was agreed that United States fishing vessels on the payment of a fee of $1.50 per registered ton, should receive annual licences conveying the privileges covered by the treaty. The treaty was rejected by the United States Senate, but Canada continued to issue modus vivendi licences up to 1918, when arrangements were made for reciprocal privileges in the ports of either country. This arrangement was terminated in the United States when their special war legislation, under which*

it was made, ceased to be effective on July 1, 1921. The following year the modus vivendi licences were revived in Canada; but the system was discontinued at the end of 1923, and United States fishing vessels were for a number of years limited to the provisions of the Treaty of 1818. In 1933 a further arrangement was made for the issue of modus vivendi licences by Canada, to the fishermen of the United States, and this has been continued to the present.

On the Great Lakes, also, the more important fishery problems, such as restocking and marketing, are necessarily international in character, and are complicated by the number of state governments interested. Much the same situation has developed in British Columbia, where the sockeye of the Fraser are taken by the canners of Puget Sound in quantities that largely exceed the catch of the Canadian canners and by trap nets and other methods forbidden in Canadian waters. In 1906 an international commission first discussed the question, while in 1922, prohibition of sockeye fishing in the Fraser for five years, with a view to conservation, was recommended by a Parliamentary commission. The matter of the conservation of this fishery is still under consideration by the governments of the two countries.

The Halibut Fishery on this side of the Pacific is engaged in only from Canadian and United States ports, but owing to the fact that it is largely carried on beyond territorial waters neither country alone can control it. At the same time it is in the interests of both countries that the fishery should be permanently maintained in a flourishing condition. The question of finding an adequate method of dealing with the matter was therefore one of those that was referred to the Canadian-American Fisheries Conference that was appointed in 1918 by the governments of the two countries to consider a settlement of outstanding fishery questions between Canada and the United States. In 1922 Canada proposed that the halibut question should be considered by itself. This was agreed to, and resulted in the Treaty of the 2nd of March, 1923, "For the Protection of The Pacific Halibut." Under this treaty a close season in each year is provided for halibut fishing.

Fishing Bounties.—*An important though indirect aftermath of the Washington Treaty remains. By an Act of 1882 (45 Vict., c. 18) for the development of the sea fisheries and the encouragement of boat building, provision was made for the distribution annually among fishermen and the owners of fishing boats of $150,000 in bounties, representing the interest on the amount of the Halifax award. An Act of 1891 (54-55 Vict., c. 42) increased the amount to $160,000, the details of the expenditure being settled each year by Order in Council.*

The Modern Industry.—*The existing fishing industry of Canada is the growth of the past century. In 1844, the estimated value of the catch was only $125,000. It doubled in the following decade, and by 1860 had well passed the million mark. Ten years later it was six millions, and this was again more than doubled in 1878. In the 90's it passed twenty millions, and in 1911, thirty-four millions. The highest record was reached in 1918 with over 60 millions, but this was in a period of greatly inflated prices. In 1930 came the world-wide depression, and in 1932 the lowest point of the past 25 years was reached with a total of slightly under 26 millions. Since then there has been a yearly advance, and in 1935 the value amounted to $34,427,854. It will be understood that these figures represent the total value of the fish marketed, whether in a fresh, dried, canned or otherwise prepared state. Meanwhile the number of employees has increased in like proportion, mounting in some years to over 90,000 while the capital investment has gone as high as $64,000,000. In 1935 the number of employees was 82,918, and the capital investment, $43,617,888. The annual per capita consumption of fish in Canada is estimated at upwards of 21 pounds.*

Among individual fish products, the cod and the salmon long disputed the primacy, but since 1895 salmon has definitely taken the lead and the heavy pack and high price of lobsters have, in more recent years, sent cod down to third place. The value of output of the salmon fishery in the period of 1869 to 1935 was approximately 448 million dollars and that of the cod fishery, 287 million. This has of course, affected the relative standing of the provinces accordingly, British Columbia now occupying the leadership that in earlier times belonged to Nova Scotia.

Trade.—*For reasons already noted, the domestic consumption of fish is relatively small in Canada, and the trade depends largely upon foreign markets. From 60 to 70 per cent of the annual capture is an average export, of which the United States takes approximately one-third and the United Kingdom one-fourth. In the calendar year 1935, total exports amounted to $24,859,486 of which $10,321,296 went to the United States and $6,759,505 to the United Kingdom. The most important single export is canned salmon (to the United Kingdom and European markets) followed by canned lobsters and fresh lobsters, while cod, dry-salted (to the West Indies, South America, etc.) is fourth in order of value.*

For fresh fish, especially whitefish and lobsters, the United States is the chief market. In brief, Canada's export trade in fish falls below that of the United Kingdom and Norway alone; including Newfoundland it exceeds both. Canadian imports of fish in 1935 amounted to $2,597,856.

FISHERIES STATISTICS OF CANADA, 1935

The total value of production of the fisheries of Canada for the year 1935 was $34,427,854, compared with $34,022,323 in 1934 and $27,496,946 in 1933. These totals represent the value of the product as marketed, whether sold for consumption fresh, domestically prepared or factory made. The following table shows the quantity caught and the value marketed of the chief commercial fishes (those valued at $100,000 or upwards) for the past five years, with a statement in the final column of the increase or decrease for 1935 compared with 1934.

1. Quantity (a) **and Value** (b) **of the Chief Commercial Fishes, Canada, 1931 to 1935**

Kind of Fish	1931	1932	1933	1934	1935	Increase or decrease 1935 compared with 1934 inc. + dec. −

(a) Quantity caught. (b) Value marketed. (c) Previous to 1934 the totals for halibut included landings at British Columbia ports by United States vessels, whereas from 1934 on the United States landings are excluded from the statistics and the figures cover landings by Canadian vessels only. See footnote at page 134 for landings in 1935 by United States vessels. (d) Prior to 1935 clams and quahaugs were combined.

REVIEW OF FISHERIES, 1935

There were 953,201,600 pounds o fish landed in the whole of Canada during the year 1935. This amount includes salt water fish and fish from all of the inland waters where commercial fishing operations are carried on. In the preceding year the catch of all kinds amounted to 933,086,900 pounds. Increased catches were reported in New Brunswick, Ontario, Saskatchewan, Alberta, British Columbia and Yukon. In the remaining provinces there were small decreases.

The market value for all of the provinces came to $34,427,854 compared with $34,022,323, or an increase of $405,531.

Major Fisheries.—The largest and most important branch of the fishing industry from a marketed value standpoint is the salmon fishery, with the lobster and cod fisheries coming second and third respectively. In the inland waters whitefish is the most important variety taken. During the year under review the total catch of salmon was 182,420,500 pounds having a marketed value of $12,540,307. The greater part of the catch was taken on the Pacific coast. Lobsters and cod are taken almost altogether on the Atlantic coast, only a small quantity of cod and no lobsters being caught on the Pacific coast. The year's catch of lobsters was 31,996,900 pounds with a marketed value of $4,378,-742 while the total catch of cod was 153,915,000 pounds having a marketed value of $2,758,140. The total catch of whitefish was 14,745,600 pounds, which had a marketed value of $1,432,072.

NOVA SCOTIA

The year's catch of fish and shellfish by Nova Scotia's fishermen amounted to 235,357,700 pounds as compared with 238,003,300 pounds in the preceding year. On the other hand, the marketed value total showed an increase of $179,034 reaching $7,852,899 as compared with $7,673,865 in 1934. From the marketed value standpoint, the lobster fishery ranks first in Nova Scotia, and the 1935 catch, 17,683,600 pounds, was worth on the market $2,732,872. Some years ago the cod fishery showed greater value return than the lobster fishery, but in 1930 the positions of the two fisheries were reversed, and since that time the lobster value has been the greater. Last year's catch of cod by Nova Scotia fishermen, 92,439,100 pounds, with a marketed value of $1,809,273, decreased by 8,228,200 pounds, and on the value side there was a drop of $259,293. The haddock fishery is third in importance among Nova Scotia fisheries and produced during the year a catch of 35,634,200 pounds, which had a marketed value of $1,104,133. On each side of the reckoning the figures were larger than in the preceding year. Herring and halibut were taken in increased quantities, but on the other hand, the catch of mackerel fell off. Swordfish which, in Canadian waters, are taken off the coast of Nova Scotia only, were landed last year in larger quantities than ever before, the total catch reaching 2,233,900 pounds. The swordfish marketed value, $264,097 went ahead of the figures for 1934 by $87,457. The catch of salmon was 603,000 pounds, or only slightly less than in the year before. There were 5,375 barrels of oysters landed, which meant an increase of 2,141 barrels. There was also a large increase in the scallop catch, which totalled 126,371 gallons, shelled, or a gain of 53,235 gallons. Fish meal production for the year—4,525 tons—was slightly smaller than in the previous year.

NEW BRUNSWICK

The total catch of fish and shellfish from the sea and inland fisheries of New Brunswick was 139,028,000 pounds, having a marketed value of $3,949,615. In the preceding year the landings were 135,738,900 pounds, and the marketed value was $3,562,082. Increased catches of cod, herring, smelts and clams were shown in the sea fisheries and of shad in the inland waters. There was a comparatively small decrease in the catch of sardines while the market value increased by $297,090. The catch of cod, 14,984,800 pounds, shows an increase, but there was a drop in the marketed value. Salmon landings were 1,656,200 pounds (sea, 1,607,600 pounds, inland, 48,600 pounds) as compared with 1,858,400 pounds in 1934. The total catch of fresh-water fish amounted to 491,100 pounds, with shad by far the most important species landed, both as regards quantity and marketed value. The shad catch was 323,800 pounds, an increase of 49,600 pounds over the 1934 total.

PRINCE EDWARD ISLAND

During the year 20,891,800 pounds of fish and shellfish with a marketed value of $899,685 were landed by Prince Edward Island fishermen. In round numbers the year's figures represent a decrease of 2,434,000 pounds in quantity and a decrease of $64,000 in marketed value. The catch from the lobster fishery, the most important of the Island's fisheries, was 6,387,000 pounds, with a marketed value of $605,107. In the preceding year 7,658,000 pounds of lobster were caught and the value as marketed was $674,186. Following lobsters in order of importance in Prince Edward Island come cod, oysters, herring and smelts. In 1935 the smelt was the only one of these species to be taken in increased quantity and to have increased market value as well. The value return from the cod and oyster fisheries was slightly greater than in 1934, although landing showed decreases. In the case of herring there was a decrease in the catch and in the value.

QUEBEC

Production from Quebec's fisheries, sea and inland fisheries together, had a marketed value of $1,947,259 in the past year as compared with $2,306,517 in 1934. Sea fish and shellfish were worth altogether $1,328,394, as marketed, a decrease of $388,754 from the total for the previous year. The freshwater catch had a market value of $618,865 and here there was an increase of $29,496 over the 1934 return. The combined landings from the sea and inland fisheries totalled 89,621,900 pounds, a decrease of 16,940,400 pounds. Cod is the chief variety of fish taken by the sea fishermen and last year both catch and marketed value fell off sharply. The catch, 40,276,900 pounds, showed a drop of 11,586,900 pounds and a decrease of $299,877 brought the marketed value down to $609,423. The quantity of lobsters landed was 2,442,600 pounds as compared with 3,574,700 pounds in the year before and the marketed value, $222,064, showed a decrease of $73,836. Sea herring landings amounted to 28,640,500 pounds and they had a marketed value of $211,459—a decrease on each side of the record. It may be noted that the combined marketed value of the year's production of cod, lobsters and herrings made up 78 per cent of the Quebec sea fisheries total. Various other sea fish in addition to those named are, of course, taken by Quebec fishermen and among the fish to be landed in increased quantities during the past year were mackerel, salmon and smelts, the mackerel landings increasing from 2,883,800 pounds to 3,564,000 pounds. In the inland division, eels, perch, pickerel and salmon were each taken in somewhat smaller quantities than in the preceding year, although in the case of eels and pickerel the marketed value increased.

ONTARIO

Ontario's catch of all kinds of fish was 35,213,100 pounds, with a marketed value of $2,852,007. This is an increase in both catch and value, the former rising by 3,982,500 pounds and the latter by $633,457. There were increased catches of blue pickerel, catfish, eels, perch, pickerel, pike, sturgeon, trout and whitefish. Four species, trout, whitefish, perch and blue pickerel, had a combined value of more than $2,000,000. The trout landings, 6,256,300 pounds show an increase of almost a million pounds in quantity and the marketed value of $738,243 is greater by almost $183,000 than in the year before. The catch of whitefish (second in importance from a monetary point of view), was 5,478,300 pounds, and its marketed value was $684,789, an increase in quantity over the preceding year of 555,300 pounds and in value of $89,106. The herring catch—2,529,100 pounds—was one of the few to show a drop, the decrease amounting to 347,000 pounds.

MANITOBA

In Manitoba the production of all kinds of fish for the year was 19,696,000 pounds, with a marketed value of $1,258,335. The chief species taken were pickerel, whitefish, saugers, tullibee and goldeyes, in order of value. The catch of pickerel, 7,218,300 pounds, with a marketed value of $498,958, was less by 1,126,500 pounds than in 1934 and on the value side there was a drop of $54,546. Whitefish, tullibee, perch and saugers also show decreased landings, but the catch of pike was greater than in the preceding year. The catch of whitefish was 3,787,800 pounds with a marketed value of $376,121. The drop in catch in this case was 1,109,000 pounds and in marketed value $46,639.

Saskatchewan

The year's catch in Saskatchewan totalled 4,953,100 pounds with a marketed value of $252,059. There was an increase of 914,800 pounds in the catch and of $32,287 in the marketed value. The catch of whitefish, the most important variety, was 3,320,200 pounds, with a marketed value of $187,949, which meant an increase in catch of 789,700 pounds, and $25,626 in value. Of the other chief varieties taken, pickerel, tullibee and pike show increases in both catch and marketed value. Production from the trout fishery decreased both in quantity and value.

Alberta

During 1935 Alberta's commercial fishermen made a total catch of 4,156,700 pounds. The marketed value was $225,741. These figures represent a slight increase in the catch, but a drop in the value. The chief kinds of fish taken were whitefish, pickerel, pike and tullibee. The catch of whitefish—1,750,800 pounds—decreased slightly as did the marketed value—$146,113. The catches of pike—976,200 pounds—and of tullibee—466,700 pounds—were larger than in 1934, while the pickerel catch—531,600 pounds—decreased by 414,900 pounds.

BRITISH COLUMBIA

On page 18 will be found a summary of fishing operations in British Columbia under the heading "Pacific Coast Fisheries".

YUKON

The fisheries of Yukon are not very extensive and the total catch in 1935 was 104,500 pounds, with a marketed value of $20,725. The catch of salmon accounted for half of the total catch and marketed value.

ATLANTIC COAST SEA FISHERIES RESULTS

During the year 1935 the quantity of Atlantic fish and shellfish landed was 475,469,300 pounds, a decrease from the previous year of 19,307,300 pounds. The following table shows the landings by provinces:

	1935 lb.	1934 lb.
Prince Edward Island	20,891,800	23,326,200
Nova Scotia	235,357,700	238,003,300
New Brunswick	138,536,900	135,258,700
Quebec	80,682,900	98,188,400
Total landings	475,469,300	494,776,600

Cod, Haddock, Hake and Cusk, and Pollock.—The total quantity of these fish landed was 216,268,900 pounds, as compared with 238,853,200 pounds in 1934, while the marketed value was $4,135,460, as compared with $4,712,375. By species, the landings were: cod, 152,245,900 pounds; haddock, 36,842,600 pounds; hake and cusk, 18,975,600 pounds; and pollock, 8,204,800 pounds. New Brunswick was the only province to show an increase in the catch of cod while Nova Scotia was the only one to show an increase in haddock landings. Prince Edward Island and Quebec showed increases in the catch of hake and cusk, while the New Brunswick catch of pollock was greater than in the year before. The catch of haddock for Nova Scotia, the largest producer, was 35,634,200 pounds, an increase of almost a million and a half pounds. The total, marketed value of haddock, $1,129,695, was slightly greater than in 1934, Dried fish production fell off considerably, due to inability of the producers to market fish in this form in as large quantities as formerly. The production of dried, not including boneless fish, amounted to 28,956,500 pounds, compared with 35,220,200 pounds in the preceding year.

Herring, Mackerel and Sardines.—While the total quantity of these species taken was somewhat less than in 1934 the value was a little greater, due to increased prices for herring and sardines. The total herring catch, 101,727,700 pounds, was less than in the year before but the marketed value, $1,116,109, was $78,000 greater. The mackerel catch was 16,049,500 pounds, with a marketed value of $308,721, decreases in both instances. In the case of sardines there were 187,666 barrels landed, having a marketed value of $1,335,798; the catch was slightly less than in 1934 but the value was $296,796 greater. Sardines are taken chiefly in New Brunswick with small quantities in Quebec. The catch of herring in both New Brunswick and Nova Scotia was greater than in the previous year while the catch of mackerel in Quebec showed an increase.

Flounders, Halibut and Swordfish.—Increased catches and marketed values were shown for swordfish and halibut while the catch of flounders increased but the marketed value dropped. Nova Scotia is the only province producing swordfish and the catch of 2,233,900 pounds was a record one and greater than the year before by 824,800 pounds, while the marketed value of $264,097 increased by $87,457. The flounder catch for the Atlantic coast was 864,400 pounds with a marketed value of $26,624. In Prince Edward Island the catch of flounders jumped from 15,500 pounds in 1934 to 130,300 pounds, while New Brunswick's 1935 catch of 199,900 pounds shows a small increase over the preceding year. Nova Scotia had a catch of 529,700 pounds which was a little less than in 1934, while in Quebec 4,500 pounds were landed, also a decrease. The total catch of halibut on the Atlantic coast was 3,020,300 pounds with a marketed value of $344,725. Nova Scotia landed 2,903,500 pounds of the total and Quebec 108,300 pounds, the remainder being caught by New Brunswick fishermen.

River Spawning Fish.—Quebec was the only one of the four provinces to show an increased catch of salmon. The total salmon catch for the coast was 3,270,500 pounds with a marketed value of $406,246, a decrease in both cases. Quebec's catch was 1,053,600 pounds, New Brunswick's 1,607,600 pounds, and Nova Scotia's 603,000 pounds. The smelt catch totalled 7,729,900 pounds with a marketed value of $570,745, an increase on both sides. New Brunswick is the chief smelt producing province and its catch of 5,273,900 pounds. in 1935 shows an increase of more than 1,500,000 pounds over the 1934 figures, Prince Edward Island came second in production with 1,001,500 pounds, while Quebec had 835,900 pounds to its credit, and Nova Scotia 618,600 pounds. Only in Nova Scotia was there a decrease. There were 8,225,600 pounds of alewives taken in the three Maritime Provinces, none being taken in Quebec. The marketed value was $97,214. New Brunswick showed a catch of 4,813,900 pounds, Nova Scotia of 3,314,300 pounds, and Prince Edward Island of 97,400 pounds.

Lobsters.—The catch of lobsters showed a substantial drop, with 31,996,900 pounds being taken as compared with 36,199,200 pounds in 1934. Landings fell off in each of the four provinces. Notwithstanding the decrease in the total catch, the marketed value shows an increase of $108,978. The gain in value was the result of better prices for the lobsters shipped in shell to market.

Other Shellfish.—Clams, quahaugs, oysters and scallops are taken in fairly large quantities but winkles, mussels and crabs are landed only in small amounts. There were 51,070 barrels of clams with a marketed value of $111,740 and 1,785 barrels of quahaugs, with a value of $7,041, taken during 1935, compared with a combined total of 33,676 barrels of both kinds taken in the preceding year with a marketed value of $78,483. In the statistics for the year 1935, clams and quahaugs are being shown separately for the first time. The quantity of oysters landed was 23,760 barrels with a marketed value of $136,517, an increase on both sides. Both Nova Scotia and New Brunswick showed larger landings, while a small decrease occurred in Prince Edward Island. The catch of scallops in Nova Scotia was almost double that of the year before, 126,371 gallons being landed in 1935. The New Brunswick landings of 6,734 gallons were less than half as large as in the previous year, while the quantity in Quebec increased. The total landings were 133,225 gallons with a marketed value of $207,641. Scallops were not taken by Prince Edward Island fishermen in 1935.

INLAND FISHERIES

The catch of whitefish was slightly greater than in 1934. Ontario shows the year's largest catch of this species with Manitoba and Saskatchewan next in order. The Ontario and Saskatchewan landings increased but a decrease was shown for Manitoba. The blue pickerel catch in Ontario shows a remarkable increase, the landings of 5,123,000 pounds being more than double that of the preceding year. Next in importance to whitefish is pickerel or dore, there being a decrease of almost 1,300,000 pounds in the catch of this kind. Manitoba is the big pickerel producing province, having 7,218,300 pounds to its credit in 1935 out of an aggregate Canadian production of 10,954,800 pounds.

Trout are taken mostly in Ontario, so far as commercial fishing is concerned. During the past year Ontario accounted for 6,256,300 pounds out of a total trout catch of 6,624,200 pounds.

The eel catch is landed chiefly in the inland waters of Quebec where in 1935 the fishermen caught 2,226,400 pounds. Up to a short time ago there was a good market for eels in Germany but it has offered much less favourable opportunity in the past two years than formerly, with the result that shippers have had to rely more on the markets of the eastern section of the United States, mainly New York.

PACIFIC COAST FISHERIES

While there was an increase in the total catch of all kinds of fish in British Columbia, the marketed value showed the slight decline of $64,806. The catch of all kinds was 404,178,800 pounds as compared with 366,615,460 pounds and the marketed value $15,169,592 compared with $15,234,335 in the preceding year. Increased catches were noted in each of the "big four" of the coast, salmon, halibut, herring and pilchards.

Salmon.—There were 178,943,100 pounds landed or an increase of 12,953,100 pounds, while the marketed value of $12,099,275 shows a drop of $302,767. The pack amounted to 1,529,022 cases with a marketed value of $9,653,897, a small decrease in each instance. The pack consisted chiefly of chums, pinks, and sockeyes, in order of production. There was a decrease of over 100,000 cases of chums and 25,000 cases of sockeyes, but an increase of almost 80,000 cases of pinks in the pack for the year. While the canned product makes up 84 per cent of the marketed value of the salmon, there were also fairly large quantities marketed for consumption fresh (28,834,700 pounds); drysalted (14,664,100 pounds); and mild cured (2,036,800 pounds). The quantity of salmon roe produced was 1,023,000 pounds, an increase over the preceding year of 400,000 pounds.

Halibut.—The catch of 10,192,700 pounds by Canadian fishermen was an increase of 424,600 pounds over the 1934 figure while, in addition to this, some 6,999,000 pounds were landed by United States vessels, chiefly at Prince Rupert, for transhipment to the United States. The value of livers sold from the Canadian vessels was $80,513 compared with $36,439 in 1934.

Herring.—The greater part of the catch of these fish was used in drysalting for the Orient. Due to unsettled conditions in that part of the world the past year there was not a large demand for these fish so that the production of the drysalted herrings dropped to 30,271,000 pounds, a decrease of more than 11,000,000 pounds. In addition to drysalting, British Columbia herring are used fresh, canned, kippered, pickled, used as bait and used in the production of meal and oil. The total catch of 100,850,700 pounds shows an increase of 18,800,000 pounds, while the marketed value of $580,031 shows a drop of $48,951 from the marketed value of 1934.

Pilchards.—The pilchard catch, used chiefly in the production of meal and oil, shows an increase of 5,130,800 pounds. The landings amounted to 91,141,100 pounds and the marketed value to $670,328, an increase in the latter instance of $120,418. The production of meal and oil was greater than in 1934, the quantity of meal manufactured being 8,681 tons, while 1,649,392 gallons of oil were extracted, an increase of more than 14,000 gallons. Pilchards are also canned and small quantities are used fresh and as bait.

Other Fisheries.—The catch of gray cod, 1,669,100 pounds, was greater by 388,000 pounds and the quantity of ling cod, landed, 6,284,100 pounds, shows an increase of 1,503,500 pounds. Both crabs and oysters were landed in larger quantities than in the preceding year, the catch of crabs being 670,800 pounds, while 3,353 barrels of oysters were landed. The number of whales taken was 202, with a marketed value of $105,360 for the oil, meal and fertilizer produced. In the preceding year the marketed value of the products from 350 whales was $183,738. Under the Pelagic Sealing Treaty the capture of fur seals off the British Columbia coast may be carried on by Indians only, and the number of seals so taken in 1935 was 841, as compared with 256 in the year before.

Note:—The foregoing review of the fisheries of Canada, for the year 1935, through the courtesy of the Deputy Minister of Fisheries, in whose department is issued it was prepared.

FISHERIES STATISTICS

The following table gives a statement for the whole of Canada of all fish caught and marketed during the year 1935, with comparative statistics for 1934. For each kind the total caught and the value at the vessel's or boat's side is first given, this being followed by statements showing the form in which each kind was marketed and the value.

Agencies of Production

PRIMARY OPERATIONS

Capital.—The amount of capital invested in the vessels, boats, nets, traps, piers and wharves, and other fishing material, used in the primary operations of catching and landing the fish during the year 1935 was $26,473,082, the sea fisheries claiming $22,000,054 and the inland fisheries, $4,473,028. The total investment shows a gain over the preceding year of $260,379, both sea and inland fisheries contributing to the increase.

Employees.—The number of fishermen employed during the year was 68,557, of which 56,833 are credited to the sea fisheries and 11,724 to the inland fisheries. The number of men in the sea fisheries shows a decrease from 1934 of 706, while the number employed in the inland fisheries, on the other hand, records an increase of 629, making a decrease of 77 for the total number of fishermen.

FISH CANNING AND CURING ESTABLISHMENTS

Capital.—The capital investment of the fish canning branch of the industry had a total value of $17,144,806, divided as follows: land, buildings and machinery, $9,252,727; materials and products on hand, stocks in process, etc., $5,812,173; and cash and accounts and bills receivable, $2,079,906. Compared with the preceding year the total capital shows a decrease of $227,993.

Employees.—The total number of persons given employment by the establishments in 1935 was 14,361, a decrease from 1934 of 441.

Tables 3 to 6, which follow, contain summaries of capital equipment and employees for Canada as a whole; other tables of the introduction present the information by provinces, while statistics by counties and fishing subdistricts will be found in the general tables of the report.

3. Capital Equipment—Primary Operations. Value of Fishing Vessels, Boats, Nets, Traps, Piers and Wharves, etc. Employed in the Canadian Fisheries, 1933, 1934 and 1935.

Details of Fish Canning and Curing Establishments

Number of Establishments.—The number of fish canning and curing establishments in operation during the year 1935 was 630, divided according to classification as follows: lobster canneries, 304; salmon canneries, 75; clam canneries, 14; sardine and other fish canneries, 14; fish curing establishments, 194; freezing plants, 13; and reduction plants, 16. The classification of each cannery is determined by the principal kind of fish canned, while the establishments classified as fish curing establishments are those having a production of dried and smoked fish, etc., with no canned product. Freezing plants have an output of fresh and frozen fish only, and reduction plants are engaged in the manufacture of fish oil and meal. The fish canning and curing industry is connected entirely with the sea fisheries, the plants being scattered along the coasts in locations of easy accessibility to the fishermen in delivering their catches. In 1935 the distribution of the plants by provinces was as follows: Prince Edward Island, 95; Nova Scotia, 176; New Brunswick, 137; Quebec, 131; and British Columbia, 91.

Employees and Salaries and Wages.—The records show a total of 14,361 persons employed in the establishments in 1935, this total including 550 salaried employees; 9,468 wage-earners; and 4,343 contract and piece-workers. The last named classification applies only to the salmon canneries of British Columbia, where a large part of the work is done under contract, the contractor engaging and paying his own help and being himself paid by the cannery operator according to the quantity of fish packed. About 75 per cent of the workers in the British Columbia salmon canneries come under this classification.

Statistics of the total number of employees in the establishments are based on the average monthly employment of wage-earners and the total number of salaried employees, contract-workers and piece-workers for the full season, the method of calculation being as follows: on the report of each establishment an addition is made of the number of wage-earners shown for each month and the resulting total is divided by the number of months the plant was in operation during the year. For example, a cannery employs 12 persons in May, 14 in June, 12 in July and 10 in August—a total of 48. This total is divided by the number of months in operation, viz. 4, and the result gives the number of wage-earners for the establishment as 12. To this number is added the number of salaried employees and the number of contract workers and piece workers, which are recorded for the year or season and not for the month. The final figure will be the number of employees credited to the establishment for the year, and the compilation of these totals provides the number of employees in the industry. The period of employment varies with the length of the season

of operations: the lobster canneries operate from one to three months, and the salmon canneries for longer periods, while many of the fish-curing establishments operate during the entire year. In some of the canneries, also, fish-curing operations are carried on prior to, and after the close of, the season for canning. The fluctuation in employment is indicated by the statistics of the number of wage-earners employed in each month. Monthly statistics for contract workers are not available, as, owing to the system of employing these workers through a contractor, the cannery operator keeps no record of the number employed each month and is unable therefore to include in his return any further particulars than the average number for the season and the sum paid.

The total sum paid to all employees during the year was $3,553,948, of which the salaried employees received 20 per cent, and the factory workers, comprising the wage-earners and the contract and piece workers, 80 per cent.

The following table gives the number of employees according to the several classifications of employment, and the salaries and wages paid under each.

7. Employees in Fish Canning and Curing Establishments in 1933, 1934 and 1935—Number and Salaries and Wages

Year	Employees on Salaries		Employees on Wages		Contract and Piece-Workers		Total of Employees and of Salaries and Wages	
	no.	$	no.	$	no.	$	no.	$
1933	473	558,500	9,453	1,728,885	4,116	736,683	14,042	3,024,068
1934	548	676,124	9,642	2,193,995	4,612	684,956	14,802	3,555,075
1935	550	703,075	9,468	2,171,478	4,343	679,395	14,361	3,553,948

Wage-earners by Months.—Returns of monthly employment in the fish canning and curing industry are available for wage-earners only: in the other classification the records of employment are for the year or season. The months of greatest activity in the industry as a whole are May and June, the number of wage-earners in each of these months being well over 8,000. These are also the months of highest employment in the lobster canneries, but in the salmon canneries the busy time covers the four months, May to August. The other classifications show employment to be fairly constant throughout the year. Totalling the number of wage-earners shown each month and dividing the result by 12 gives the average number of wage-earners for the 12 months of 1935 as 4,065, compared with an average of 3,982 in 1934.

Statistics of employment by months for the industry are given in the following table.

8. Wage-earners in Fish Canning and Curing Establishments—Number on Pay Roll on 15th of each month, 1933, 1934 and 1935 (a)

(a) Exclusive of contract workers and piece workers.

Classified Weekly Wage Payments.—The annual census of industry contained, for the year 1935, an inquiry regarding weekly wage payments to factory workers, and a table giving a summary of the particulars gathered for fish canning and curing establishments is presented herewith. The operators of the plants were instructed to show, under the various wage groups, the number of manual workers in any week in the month of employment of greatest number. The classification refers to actual amounts paid and not to wage rates. The compilation of the returns shows the largest group of male workers to contain those receiving from $10 to $10.99 each per week, and the largest group of female workers to include those receiving under $6 per week. Approximately 80 per cent of the number of female workers in the low wage group is credited to the lobster canneries and the number probably comprises mainly those who work for a few hours daily and whose number of hours per week would be considerably below the average working week.

9. Classified Weekly Wage Payments: Amounts Paid to Manual Workers in Fish Canning and Curing Establishments for one week in month of Greatest Employment.

Materials Used.—The quantity of fish delivered to the establishments during the year 1935 for use in the preparation of the various products and for re-sale for consumption fresh was 6,237,719 cwt., representing 71 per cent of the total quantity of sea fish caught and landed during the year. The remainder of the catch was marketed directly by the fishermen, either for consumption fresh or as domestically prepared. The quantity used by the establishments shows an increase over the preceding year of 625,158 cwt., or 11 per cent. Other items under the head of "materials used" include salt ($212,554), containers ($3,152,924), and miscellaneous ($448,349). The following table itemizes the principal materials used in the years 1933 to 1935.

10. Quantity and Value of Materials Used in Fish Canning and Curing Establishments, 1933, 1934 and 1935

Materials	1933		1934		1935	
	Quantity	Value	Quantity	Value	Quantity	Value
		$		$		$
Fish ..... cwt.	4,866,142	8,178,543	5,612,561	11,638,820	6,237,719	10,958,895
Salt ..... cwt.	435,512	216,618	460,950	236,185	427,867	212,554
Containers	–	2,321,918	–	3,345,792	–	3,152,924
Other materials	–	243,210	–	346,363	–	448,349
Total	–	**10,960,289**	–	**15,567,160**	–	**14,772,722**

Production.—The output of the factories in 1935 had a total value of $23,458,356, comprising $18,253,891, the value of fish canned, cured or otherwise prepared, and $5,204,465, the value of fish sold for consumption fresh. To the total value the salmon canneries contributed $10,548,525, or 45 per cent; the fish curing establishments, $6,643,790, or 28 per cent; the lobster canneries, $3,031,281, or 13 per cent; the sardine and other fish canneries, $1,782,329, or 8 per cent; and the clam canneries, freezing plants and reduction plants, combined, $1,452,431, or 6 per cent. The value of output of the establishments represents 80 per cent of the total marketed value of the sea fisheries production, the remaining 20 per cent covering the value of the fish marketed directly by the fishermen, whether for consumption fresh or as domestically prepared.

In the following table will be found the value of production in the years 1933 to 1935, arranged according to the classification of the establishments.

11. Value of Production of Fish Canning and Curing Establishments,

Description of establishment	1933			1934			1935

General Tables.—A section of the general tabular matter of the report is devoted to the statistics of fish canning and curing establishments, and in this section information regarding capital, employees, salaries and wages, value of production, and other phases, which has been briefly summarized in the foregoing paragraphs, is given in detail, by provinces and by countries or districts.

Review by Provinces

The following tables (12-18) show by provinces: the total value of the fisheries; the quantity caught and landed and the value marketed of the chief commercial fishes; the quantity and value of all fish caught and landed and marketed; the total values for counties or districts of sea fish caught and landed and marketed; the quantity of sea fish taken offshore; the capital equipment; and the number of employees.

12. Value of Fisheries by Provinces, 1931-1935, in order of Value, 1935

FISHING BOUNTY

Under the authority of "An Act to encourage the Development of the Sea Fisheries and the Building of Fishing Vessels" the sum of $160,000 is appropriated annually by the Governor in Council. It is distributed under the name of Fishing Bounty by the Department of Fisheries amongst fishermen and fishing vessel and boat owners on the Atlantic coast, under regulations made from time to time by the Governor in Council.

For the year 1935, payment was made on the following basis:—

To owners of vessels entitled to receive bounty—$1 per registered ton; payment to the owner of any one vessel not to exceed $80.

To vessel fishermen entitled to receive bounty—$6.30 each.

To owners of boats measuring not less than 12 feet keel—$1 per boat.

To boat fishermen entitled to receive bounty—$5.45.

There were 12,498 bounty claims paid. In the preceding year there were 12,623 bounty claims paid.

The total amount paid in 1935 was $159,966.20, allocated as follows:—

To 600 vessels and their crews	$ 33,462.40
To 11,898 boats and their crews	126,503.80

FOREIGN TRADE

Exports.—The value of fish and fishery products of Canadian origin exported during the year 1935 was $24,859,486, an increase over the preceding year of $2,362,351, or 11 per cent. The chief items in order of value are canned salmon, $7,394,632; canned lobster, $2,274,783; fresh lobster, $1,641,300; dried cod, $1,538,203; and fresh and frozen salmon, $1,228,162. Each of these items, excepting dried cod, shows an increase over 1934. The principal countries of destination are the United States, which took goods to the value of $10,321,296; the United Kingdom, $6,759,505; and Australia, $2,060,351. The value of exports to these three countries, combined, represents 77 per cent of the total exportation during the year. Altogether there were 87 countries to which Canadian fish and fishery products were shipped in 1935.

Imports.—The imports of fish and fishery products into Canada, for consumption, were valued at $2,597,856, compared with $2,121,762 in 1934. Chief among the imports are sardines and oysters, the former from Norway and the latter from the United States. There is also a considerable importation of fish oil—principally cod liver oil and whale and spermaceti oil.

HISTORICAL REVIEW

The five tables following will afford a review of the fishing industry of Canada for the past several years. In the case of production, returns are given, by provinces, back to 1870. In the case of the number and value of vessels, boats, etc., the review extends to 1880, and in the case of the number of employees to 1895.

NOTE.—From 1880 to 1906 inclusive, years ended June 30; from 1908 to 1917 (a) inclusive, years ended March 31; since and including 1917 (b) calendar years. No statistics are available for the nine-month period ended March 31, 1907.

(c) Includes prior to 1917, value of miscellaneous material.

(d) Comprises small fish and smoke houses, fishing piers and wharves, lobster and crab traps, and other fishing material not separately classified in table.

19. Historical Review—(c) Number of Persons employed in the Fisheries Industry of Canada for the years 1895, 1900 and 1905 to 1935

Year	Number of Persons in fish canning and curing establishments	Number of Men in Vessels	Number of Men in Boats	Number of Men Fishing, not in Boats (c)	Total Number of Fishermen	Total Number of Persons in Fishing Industry
1895	13,030	9,804	61,530	–	71,334	84,364
1900	18,205	9,205	71,859	–	81,064	99,269
1905	14,037	9,366	73,505	–	82,871	96,908
1906	12,317	8,458	67,646	–	76,104	88,421
1908	11,442	8,089	63,165	–	71,254	82,696
1909	13,753	8,550	62,520	–	71,070	84,823
1910	21,694	7,931	60,732	–	68,663	90,357
1911	24,978	8,521	60,089	–	68,610	93,588
1912	25,206	9,056	56,870	–	65,926	91,132
1913	23,327	9,076	56,005	–	65,081	88,408
1914	26,893	10,525	61,251	–	71,776	98,669

NOTE.—From 1895 to 1906 inclusive, years ended June 30; from 1908 to 1917(a) inclusive, years ended March 31; since and including 1917(b) calendar years. No statistics are available for the nine-month period ended March 31, 1907.

20. Table for Conversion of Weights of Fish

Fresh fish in this table in the case of cod, haddock, hake and cusk, pollock and halibut (Atlantic) means fish with the head on and the entrails removed. The weight of halibut on the Pacific coast is to be the weight minus head and entrails. In the case of swordfish and tuna, it means fish with the head, tail and entrails removed. In other cases, fresh fish means fish as it comes from the water.

COD, HADDOCK, HAKE AND CUSK OR POLLOCK

300 lb. of fresh produce one cwt. of fresh fillets.
160 lb. of fresh produce one case of canned.
200 lb. of fresh produce one cwt. of green salted.
200 lb. of fresh produce one cwt. of pickle cured.
300 lb. of fresh produce one cwt. of smoked fillets.
200 lb. of fresh produce one cwt. of smoked.
300 lb. of fresh produce one cwt. (100 lb.) of dried.
400 lb. of fresh produce one cwt. of boneless.

HERRING

70 lb. of fresh produce one case of canned.
200 lb. of fresh produce one cwt. of smoked.
300 lb. of fresh produce one barrel of pickled.
200 lb. of fresh produce one barrel of bait (fresh or salted).
200 lb. of fresh produce one barrel of fertilizer.
125 lb. of fresh produce one cwt. of dry salted.

MACKEREL OR SHAD

70 lb. of fresh produce one case of canned.
300 lb. of fresh produce one barrel of pickled.
400 lb. of fresh produce one barrel of salt mackerel fillets.

SARDINES

One barrel of fresh produces $4\frac{1}{4}$ cases canned.
(One case of 25 lb. equals 100 tins $\frac{1}{4}$ lb. each.)

PILCHARDS

70 lb. of fresh produce one case of canned.
200 lb. of fresh produce one barrel of bait.

ALEWIVES

200 lb. of fresh produce one cwt. of smoked.
275 lb. of fresh produce one barrel of pickled.

SALMON

84 lb. of fresh (Pacific) produce one 48-lb. case canned.
70 lb. of fresh (Atlantic) produce one 48-lb. case canned.
170 lb. of fresh produce one cwt. of smoked.
125 lb. of fresh produce one cwt. of dry salted.
150 lb. of fresh produce one cwt. of mild cured.
150 lb. of fresh produce one cwt. of pickled.

TUNA

100 lb. of fresh produce one case canned.

CLAMS

One barrel of fresh produces one case of canned. (48 tins of 6 oz. of clam meat each.)

LOBSTERS

200 lb. of fresh produce one case of canned. (48 tins of 12 oz. lobster meat each.)
500 lb. of fresh produce one cwt. of lobster meat.

III. (2) Imports and Exports of Fish and Fishery Products—con.

(b) Statement showing the Quantities and Values of Fish and Fishery Products of Canadian Origin Exported from Canada during the Calendar years 1933, 1934 and 1935

(Compiled by the External Trade Branch)

Classification	1933		1934		1935	
	Quantity	Value	Quantity	Value	Quantity	Value
		$		$		$
Fish and Fishery Products—						
Fish—						
Alewives, salted ..... cwt.	20,212	36,410	49,776	98,438	22,809	57,703
Bait fish ..... ton	621	13,653	416	9,966	608	15,266
Clams, canned ..... cwt.	627	8,995	391	2,318	428	4,893
Clams, fresh ..... cwt.	14,856	26,907	16,647	22,809	56,624	63,446
Codfish, boneless, canned or preserved, n.o.p. ..... cwt.	19,413	127,654	22,454	185,596	23,178	194,318
Codfish, dried ..... cwt.	346,869	1,801,666	338,460	1,956,004	291,569	1,538,203
Codfish, fresh and frozen ..... cwt.	7,042	43,133	9,925	64,751	22,946	145,774
Codfish, green-salted (pickled) ..... cwt.	118,124	310,766	98,578	291,971	107,498	319,403
Codfish, smoked ..... cwt.	5,831	51,711	8,718	88,071	11,589	114,255
Eels, fresh and frozen ..... cwt.	10,126	74,018	8,712	56,477	8,053	54,059
Haddock, canned ..... cwt.	11	79	436	2,335	229	2,444
Haddock, dried ..... cwt.	7,906	31,770	8,781	40,776	11,598	49,181
Haddock, fresh and frozen ..... cwt.	16,593	131,420	26,659	202,960	29,307	168,856
Haddock, smoked ..... cwt.	7,235	60,316	8,277	78,194	9,987	92,598
Halibut, fresh and frozen ..... cwt.	41,819	338,948	43,437	393,006	53,092	485,975
Herrings, lake, fresh and frozen ..... cwt.	7,362	77,712	7,490	85,336	7,240	72,399
Herrings, sea, canned ..... cwt.	2,968	19,848	13,964	96,860	15,403	109,928
Herrings, sea, dry-salted ..... cwt.	589,539	628,213	311,098	356,549	402,781	543,974
Herrings, sea, fresh and frozen ..... cwt.	151,745	97,244	265,673	203,640	297,342	259,584
Herrings, sea, pickled ..... cwt.	26,606	61,104	35,361	79,658	27,454	69,847
Herrings, sea, smoked ..... cwt.	59,751	151,337	66,699	191,588	49,853	159,694
Lobsters, canned ..... cwt.	67,294	2,450,863	52,938	2,499,372	45,693	2,274,783
Lobsters, fresh ..... cwt.	107,075	1,605,931	97,485	1,550,452	92,049	1,641,300
Mackerel, fresh and frozen ..... cwt.	5,714	27,956	2,832	14,132	1,118	6,158
Mackerel, pickled ..... cwt.	90,617	249,618	110,951	350,346	84,724	319,285
Oysters, fresh ..... cwt.	1,696	9,727	2,316	12,005	1,081	7,365
Pilchards, canned ..... cwt.	4,693	36,142	6,240	51,375	5,603	45,577
Pollock, hake and cusk, boneless, canned or preserved, n.o.p. ..... cwt.	64	258	28	137	–	–
Pollock, hake and cusk, dried ..... cwt.	42,151	139,406	48,891	188,513	47,892	189,789
Pollock, hake and cusk, fresh and frozen ..... cwt.	410	2,586	956	2,201	1,772	3,094
Pollock, hake and cusk, green-salted ..... cwt.	15,535	19,064	18,252	28,991	10,084	14,402
Pollock, hake and cusk, smoked ..... cwt.	8	45	10	72	327	2,232
Salmon, canned ..... cwt.	459,644	5,270,092	391,645	5,906,424	508,478	7,394,632
Salmon, dry-salted (chum) ..... cwt.	95,125	168,709	106,186	235,478	183,001	414,321
Salmon, fresh and frozen ..... cwt.	113,483	1,148,520	107,602	1,187,727	119,986	1,228,162
Salmon, pickled ..... cwt.	22,186	279,342	27,399	413,979	28,581	418,175
Salmon, smoked ..... cwt.	227	4,373	185	4,091	224	5,193
Salmon trout or lake trout, fresh and frozen ..... cwt.	21,957	200,075	33,006	301,446	39,771	378,531
Sardines (little fish in oil) ..... cwt.	29,718	226,784	48,556	383,080	54,130	448,150
Shell fish, other, fresh ..... cwt.	7,509	120,938	7,066	117,175	9,278	162,727
Smelts, fresh and frozen ..... cwt.	65,878	663,301	49,458	575,787	71,550	740,259
Sturgeon, fresh and frozen ..... cwt.	844	18,668	1,088	28,319	1,349	38,978
Swordfish, fresh and frozen ..... cwt.	18,265	134,527	15,115	156,330	20,397	214,262
Tongues and sounds ..... cwt.	678	3,353	773	6,756	479	4,304
Tullibee, fresh and frozen ..... cwt.	20,194	90,505	11,186	47,586	25,437	143,493
Whale meat, canned or preserved, n.o.p. ..... cwt.	–	–	3	17	–	–
Whitefish, fresh and frozen ..... cwt.	110,086	988,415	101,397	977,147	117,478	1,260,375
Other fresh water fish, fresh and frozen ..... cwt.	270,372	1,664,788	283,952	1,891,754	299,870	2,036,827
Other fresh water fish, salted, dried, smoked or pickled ..... cwt.	110	536	30	122	179	1,703

NOTE.—A number of "late" claims amounting in all to $1,880.45, which are included in the above statement, are for the season of 1934. As the basis of distribution, for 1934 differed from that of 1935 a number of the figures indicated in the "amount" columns do not balance with the number of claims paid.

III. (7) Fisheries Production in 1935 in Certain Areas Defined by the North American Council on Fishery Investigations

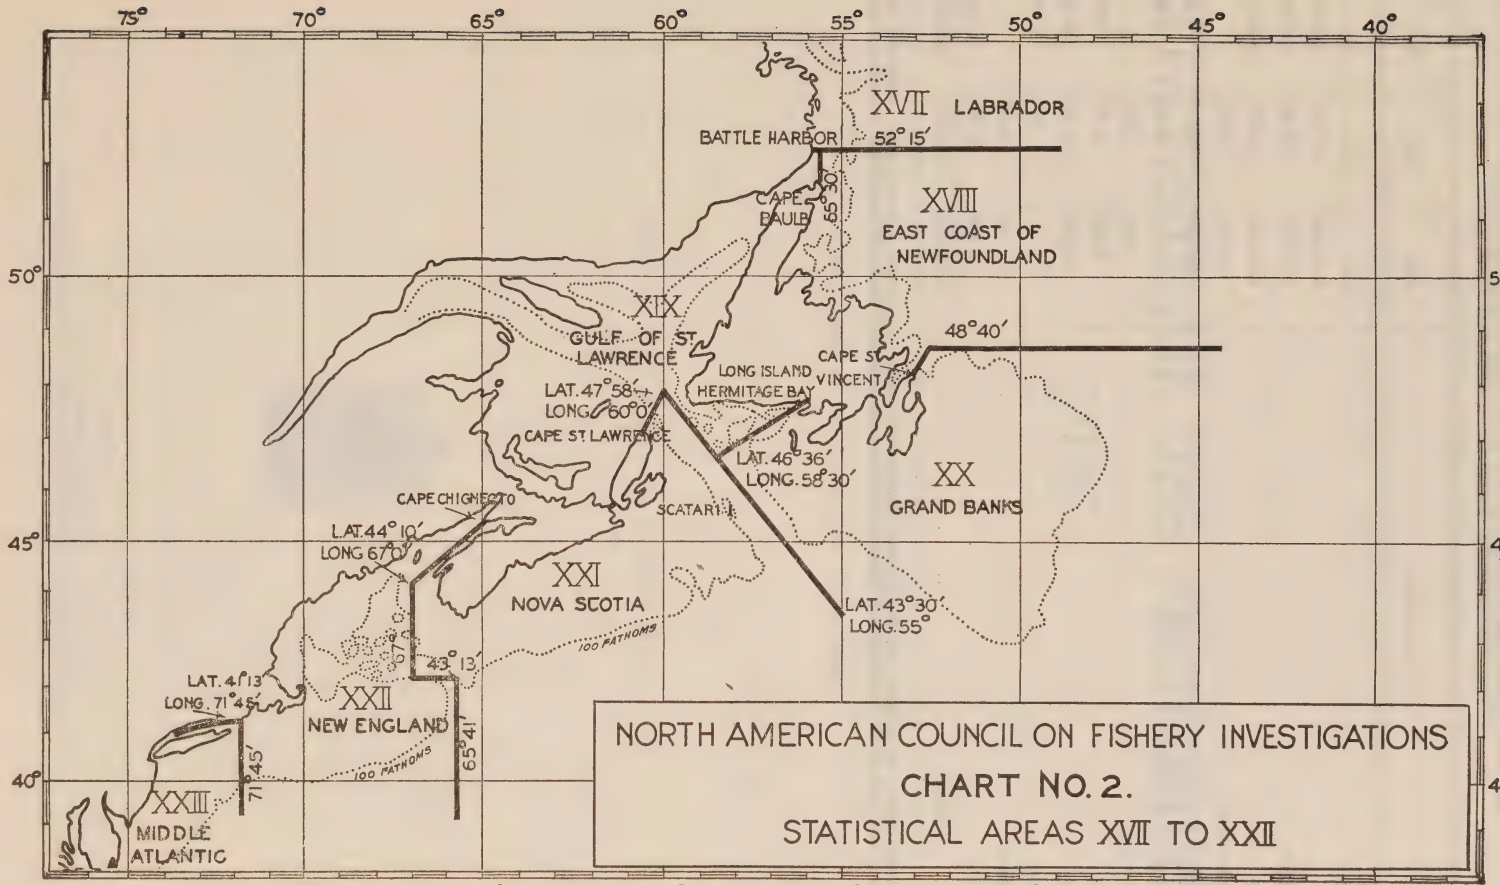

The following statement, prepared from Canadian fisheries statistics for the year shows the catches by Canadian fishermen in 1935 in certain areas, defined by the North American Council on Fishery Investigations, an international body representative of Canada, United States, Newfoundland and France for the co-ordination of fishery investigations in the Atlantic waters of the Continent. The boundaries of the areas are indicated on the accompanying chart.

Kind of Fish		Area No. 19	Area No. 20	Area No. 21	Area No. 22
Cod	cwt.	595,885	280,224	629,717	16,633
Haddock	cwt.	8,346	–	355,839	4,241
Hake and cusk	cwt.	45,762	–	111,032	32,962
Pollock	cwt.	–	–	49,990	32,058
Catfish	cwt.	–	–	3,760	–
Halibut	cwt.	1,148	–	29,001	54
Flounders, brill, plaice	cwt.	3,130	–	5,202	312
Skate	cwt.	–	–	8,942	103
Soles	cwt.	–	–	11,302	–
Herring	cwt.	598,039	–	208,389	210,849
Mackerel	cwt.	53,530	–	106,865	100
Sardines	bbl.	167	–	–	187,499
Alewives	cwt.	15,440	–	26,368	40,448
Bass	cwt.	–	–	179	–
Perch	cwt.	50	–	–	–
Salmon	cwt.	23,982	–	4,011	4,712
Shad	cwt.	3,200	–	2,479	4,498
Smelts	cwt.	73,751	–	3,295	253
Sturgeon	cwt.	65	–	2	–
Trout	cwt.	83	–	–	–
Tuna	cwt.	–	–	3,166	–
Capelin, launce and silversides	bbl.	11,499	–	–	–
Eels	cwt.	873	–	1,155	–
Grayfish	cwt.	400	–	30,200	–
Squid	bbl.	1,366	–	2,352	–
Swordfish	cwt.	–	–	22,339	–
Tom cod	cwt.	7,970	–	5	–
Mixed fish	cwt.	9,516	–	60,126	–
Clams	bbl.	8,917	–	17,113	25,040
Crabs	cwt.	72	–	–	–
Lobsters	cwt.	204,354	–	109,286	6,329
Mussels	cwt.	–	–	12	–
Oysters	bbl.	21,865	–	1,895	–
Quahaugs	bbl.	1,785	–	–	–
Scallops	gal.	120	–	126,371	6,734
Winkles	cwt.	–	–	247	191
Dulse, green	cwt.	–	–	112	7,434
Seaweed	cwt.	–	–	400	–
Hair seals	No.	8,740	–	–	–
Porpoises	No.	577	–	–	–

NOTE.—Through inadvertence the quantities of cod taken in Area No. 20 (Grand Banks) were not shown separately in the table of the reports for the years 1933 and 1934. Following are the figures for the two years:

Cod taken in Area No. 20— 1933: 271,824 cwt. 1934: 342,720 cwt.

The above catches should be substracted from the cod catches shown in Area No. 21 in each year.

PRÉFACE

Ce rapport est publié en vertu d'une entente établissant la coopération en matière de statistique entre le Bureau Fédéral de la Statistique et les différents services gouvernementaux ayant juridiction sur les pêcheries canadiennes. Ces services comprennent le ministère fédéral des Pêcheries, qui exerce sa juridiction sur les pêcheries des Provinces Maritimes, du Yukon, de la Colombie Britannique et des îles de la Madeleine, et les Divisions des Pêcheries des provinces d'Ontario, Québec, Manitoba, Saskatchewan et Alberta, qui régissent les pêcheries de leurs provinces respectives, sauf les pêcheries des îles de la Madeleine, en Québec, lesquelles sont sous la juridiction du ministère des Pêcheries du Dominion. La Colombie Britannique possède une Division des Pêcheries, mais cet organisme ne s'occupe pas de statistique pour son propre compte.

En vertu de l'arrangement dont il est parlé plus haut, les statistiques du poisson pêché, et des produits offerts en vente à l'état frais ou après une préparation sommaire, sont recueillies par les fonctionnaires locaux du ministère des Pêcheries, vérifiées et condensées au ministère des Pêcheries, puis compilées au Bureau Fédéral de la Statistique. En ce qui concerne le poisson industriellement préparé et ses sous-produits, des formules similaires à celles en usage dans le recensement des autres branches de la production sont envoyées directement par le Bureau aux usines poissonnières, les fonctionnaires des services des Pêcheries s'assurant que ces formules sont consciencieusement remplies et promptement retournées. Les fonctionnaires des gouvernements provinciaux voudront bien accepter nos remerciements pour le concours qu'ils nous ont prêté.

R. H. COATS,
Statisticien du Dominion.

Bureau fédéral de la statistique,
Ottawa, le 14 août 1936.

23705—15½

LES PÊCHERIES DU CANADA

Le début des pêcheries.—*La pêche est une des plus anciennes industries du Canada. Laissant de côté les traditions et les légendes pour s'en remettre aux faits établis, il faut admettre que c'est à Cabot que revient l'honneur d'avoir découvert, en 1497, les bancs de morue de Terre-Neuve, quand il vit pour la première fois la terre ferme de l'Amérique du Nord. Il rapporta que la mer y était si poissonneuse qu'il était possible de pêcher avec un panier dans lequel il y avait une pierre pour le faire plonger. Cap-Breton, l'un des plus anciens noms géographiques de l'Amérique, est un souvenir des premiers pêcheurs français que les Espagnols et les Portugais ne tardèrent pas à suivre. Fernandez de Navarette nous apprend que des pêcheurs de ces trois nationalités fréquentaient le Grand Banc en 1502. La pêche se pratiquait au moyen de lignes à main passées sur des barils fixés à l'extérieur du passavant pour éviter le contact des lignes avec les flancs du navire; les bateaux de pêche se livraient à leurs opérations tant que durait le beau temps, puis s'en retournaient en France avec leurs prises de 30,000 à 50,000 morues. Les voyages entrepris le long du littoral démontrèrent bientôt que la morue était aussi abondante en vue du rivage que sur les bancs lointains, et les équipages s'accoutumèrent alors à jeter l'ancre dans une baie, à construire une hutte sur la grève et à faire dans leurs petites chaloupes des excursions quotidiennes dont le produit était salé et séché à terre, puis expédié en France à la fin de la saison. Lorsqu'il remonta le Saint-Laurent, en 1534, Jacques Cartier trouva partout les traces du passage de ces "capitaines courageux" et de leurs rivalités, lesquelles s'exerçaient aussi bien dans des rencontres armées que dans la capture du poisson qui les avait attirés si loin de chez eux. Chauvin fonda un établissement de cette sorte à Tadoussac, en 1599. Bientôt après les pêcheurs s'habituèrent à passer l'hiver en Amérique et à y construire de véritables villages. La première concession de pêche fut octroyée par le roi de France à de Monts, en 1603. On peut donc considérer la pêche comme la première industrie à laquelle se soient livrés systématiquement les Européens au Canada; depuis ces temps lointains elle n'a jamais cessé de donner sa récolte annuelle.*

Le traité d'Utrecht de 1713 attribua Terre-Neuve à la Grande-Bretagne, dépossédant la France de son droit de pêcher et de faire sécher le poisson sur certaines sections du littoral de cette île, mais la France conserva les pêcheries de Cap-Breton et celles du golfe. La guerre de Sept Ans (1756-63) interrompit les opérations de pêche sur une vaste échelle. Lorsqu'elle se termina, la famille Robin, de Jersey, vint au Canada et au moyen d'acquisitions graduelles s'empara de toutes les anciennes stations de pêche françaises. Jusqu'à l'arrivée des Loyalistes, les pêcheurs s'étaient occupés exclusivement de la morue. Seules les pêcheries côtières étaient exploitées durant cette phase, y compris celles du littoral du Labrador; ce ne fut qu'en 1873 qu'un navire de pêche en haute mer sortit du port de Lunenburg qui est maintenant le centre principal de la grande pêche.

Lieux de pêche du Canada.—*Les pêcheries canadiennes sont probablement les plus vastes de l'univers. Sur l'Atlantique, depuis Grand Manan jusqu'au Labrador, le rivage mesure plus de 5,000 milles, à l'exclusion des anses et échancrures qui le dentellent. La baie de Fundy avec 8,000 milles carrés, le golfe Saint-Laurent dix fois plus grand, et d'autres eaux océaniques représentent ensemble environ 200,000 miles carrés, c'est-à-dire plus des quatre-cinquièmes des pêcheries du nord de l'Atlantique. De plus, l'on compte sur les bords de l'Atlantique 15,000 milles carrés d'eaux territoriales sous le contrôle absolu de la Puissance. Mais ces vastes étendues ne représentent qu'une partie des eaux canadiennes. Sur le Pacifique, le littoral canadien mesure 7,180 milles; ses baies et fiords innombrables offrent aux pêcheurs une multitude d'abris très sûrs. Enfin, disséminés sur tout le territoire s'égrènent une série de lacs qui, tous ensemble, contiennent plus de la*

moitié des eaux douces du globe, la part du Canada dans les Grands Lacs seulement couvrant plus de 34,000 milles carrés, auxquels viennent s'ajouter le lac Winnipeg (9,457 milles carrés), le lac Manitoba et de nombreux autres non moins vastes.

Mais la qualité des produits des pêcheries canadiennes est encore plus remarquable. Chacun sait que l'excellence de la chair du poisson est en proportion directe de la pureté et de la fraîcheur des eaux qu'il habite. Considérés sous cet angle la morue, le flétan, le hareng, le maquereau, le corégone et le saumon du Canada n'ont pas de rivaux dans l'univers. Il est donc évident que les plus magnifiques pêcheries de l'hémisphère occidental, sinon du globe, appartiennent au Canada.

Le bref exposé qui précède démontre qu'il est impossible d'envisager les pêcheries canadiennes sous un unique aspect; embrassant tout un continent, elles offrent nécessairement une grande diversité. Laissant de côté la baie d'Hudson et la région subarctique qui s'étend depuis l'Ungava jusqu'à l'Alaska, on peut diviser ainsi qu'il suit les pêcheries canadiennes:

1. Pêcheries de l'Atlantique.—*Elles sont les premières en date, et jusqu'en 1918 elles furent les plus importantes par la valeur de leurs produits. On y prend la morue, le flétan, l'églefin, le merlan, le hareng, le maquereau, l'éperlan, la sardine, le homard et l'huître. Le golfe et les eaux intérieures des Provinces Maritimes et du Québec sont quelquefois considérés distinctement; mais en les réunissant, la liste ci-dessus s'accroîtrait du saumon, de l'alose, du gasparot, de l'éperlan, du bar, du poulamon et du maskinongé. Les opérations de pêche sont communément considérées sous deux aspects distincts, la pêche hauturière ou de haute mer et la pêche côtière. Cette dernière se pratique au moyen de petites embarcations le plus souvent automotrices, montées par deux ou trois hommes; on y emploie aussi de petits navires dont l'équipage se compose de quatre à sept hommes. Les engins de pêche le plus fréquemment employés sont les rets à mailles, les lignes à main et les chaluts; d'autre part, on dispose le long du rivage des filets, des sennes et des nasses. La pêche à l'églefin est aussi importante que celle de la morue; le printemps et l'été ce poisson est ouvert et salé mais la meilleure saison est l'automne, le poisson étant alors vendu frais ou fumé, sous le nom de "finnan haddie." La pêche en haute mer se pratique au moyen de navires de 40 à 100 tonnes, portant de douze à vingt hommes, qui pêchent surtout dans des doris au moyen de lignes de fond; en outre, on pêche parfois directement des navires au moyen de lignes à main. Les flottilles fréquentent tour à tour les différents bancs de pêche tels que le Grand Banc, le Banc Intermédiaire et le Banquereau. Ces navires, construits sur place, restent quelquefois plusieurs mois en mer; les naufrages sont rares, tant est grande l'habileté de leurs équipages. A leur retour, le poisson, qui a été vidé et salé à bord, est débarqué, lavé et séché. Les Antilles sont le principal débouché de ce produit; aucune autre morue ne pourrait supporter le climat tropical aussi bien que celle préparée par les pêcheurs de la Nouvelle-Ecosse. De grands chalutiers à vapeur, tels que ceux en usage dans la mer du Nord, ont été introduits depuis plusieurs années dans les pêcheries canadiennes du littoral de l'Atlantique. Ces chalutiers se livrent à la pêche presque toute l'année; leurs prises approvisionnent le commerce de poisson frais. En vertu de la Loi des pêcheries, les chalutiers doivent être inscrits comme navires britanniques au Canada, appartenir à des gens du Canada, et être pourvus d'un permis émanant du ministre des Pêcheries; leurs opérations doivent se restreindre aux eaux situées à 12 milles au moins du littoral.*

La pêche du homard est une autre industrie caractéristique. En 1870, il n'existait que trois homarderies sur le littoral de l'Atlantique; en 1935 on en compte 304, occupant plus de 6,000 personnes; 30,000,000 de homards constituent une prise normale. L'un des constants problèmes de cette industrie, c'est d'assurer l'exécution des dispositions prohibant la capture des jeunes homards et des adultes au moment du frai; on croit qu'avec la coopération des pêcheurs le rendement de cette pêche peut se maintenir. Au Nouveau-Brunswick, la mise en boîte des sardines, qui sont de jeunes harengs, est une industrie comparable en importance

à celle du homard, qu'elle dépasse même, en certaines années, au point de vue de la valeur. Grâce à l'ostréiculture, que le Gouvernement a développée, l'huître autrefois abondante mais qui avait de beaucoup diminué pendant un certain nombre d'années a été plus nombreuse cette année. On a mis du naissain dans les endroits favorables des eaux de l'Ile du Prince-Edouard. Ce travail est dirigé par des experts en ostréiculture.

Les pêcheurs des Provinces Maritimes constituent une population industrielle spécialisée. La pêche côtière s'y pratique d'avril à novembre, et même en janvier, dans les districts abrités et, quoique les plus grands navires travaillent pendant tout l'hiver, plusieurs milliers d'hommes sont disponibles à certains moments de l'année pour d'autres travaux. Les uns cultivent de petites parcelles de terre entourant leurs maisons, les autres travaillent dans les chantiers de bois du Nouveau-Brunswick ou bien dans les charbonnages de la Nouvelle-Ecosse. Quelques pêcheurs de Lunenburg et d'ailleurs font du négoce avec les Antilles.

2. Pêcheries intérieures.—*Les Grands Lacs et les eaux tributaires du St-Laurent constituent une seconde grande division des pêcheries canadiennes. La valeur des pêcheries intérieures du Québec se compose principalement de produits de la pêche à l'anguille, au doré et à l'esturgeon. En Ontario, le corégone, la truite, le doré et le hareng des lacs sont les poissons les plus importants, commercialement parlant, quoique le brochet, l'esturgeon et quelques autres poissons ne soient pas à dédaigner. Dans les Grands Lacs la saison de pêche dure de six à huit mois; quelques pêcheurs continuent leurs opérations durant l'hiver en creusant des trous dans la glace, mais le plus grand nombre cherchent une autre occupation dans l'intermède des saisons. En se dirigeant plus à l'ouest, le lac Winnipeg, le lac Winnipegosis, le lac Manitoba et des lacs plus petits au nord et à l'est de celui-ci fournissent la plupart des poissons du Manitoba. Le corégone et le doré sont les principaux d'entre eux, mais le brochet, le tullipi, l'œil-d'or et nombre d'autres variétés s'y trouvent aussi. En Saskatchewan et en Alberta, la pêche pour le commerce est confinée aux régions situées au nord de la rivière Saskatchewan où l'on prend de grandes quantités de corégone. Les difficultés du transport n'ont pas encore été surmontées; quelques-uns des plus grands lacs du continent, les lacs Reindeer, Grand Esclave, Grand Ours et des centaines de lacs plus petits n'ont aucune communication avec les marchés de consommation. Toutefois, les lacs de l'Ouest jouent le même rôle que le St-Laurent au temps du régime français et que les bancs de morue dans l'histoire de la Nouvelle-Angleterre, en facilitant la colonisation du pays, puisqu'ils offrent un aliment certain aux colons nouvellement arrivés.*

3. Pêcheries du Pacifique.—*La Colombie Britannique possède des pêcheries d'eau douce presque similaires à celles de la région des Prairies; il est douteux que le commerce des fourrures (qui devait être l'agent de liaison entre cette province et le reste du Canada à travers les Montagnes Rocheuses) eût pu s'établir au commencement de l'histoire de cette province si ces pêcheries n'avaient pas existé. Les pêcheries de la Colombie Britannique sont d'une grande richesse; elles représentent environ les deux-cinquièmes de l'industrie poissonnière du Canada et ses produits se consomment jusqu'aux extrémités de la terre; ils sont essentiellement constitués par le saumon pêché à l'embouchure du fleuve Fraser, de la Skeena, de la Naas et d'autres rivières qui descendent le versant occidental des montagnes. Chacune des variétés de ce roi des poissons comestibles (qui toutefois n'est pas le* salmo salar *ou vrai saumon) fréquentant les eaux du Pacifique se trouve sur le littoral de la Colombie Britannique, c'est-à-dire le sockeye ou dos bleu, le saumon de printemps, le saumon argenté, le saumon rose et le saumon bécard. Entre tous ceux-ci, le dos bleu, bien qu'il ne donne pas d'aussi fortes prises que le saumon rose et le bécard, est de beaucoup le plus important, en raison de l'excellence de sa chair, dont la belle couleur rougeâtre est tant appréciée des consommateurs de la Grande-Bretagne et des pays étrangers. Le fleuve Fraser était autrefois la principale source d'approvisionnement de saumon, mais sa*

production est aujourd'hui dépassée par celle de la rivière Skeena et de ses tributaires septentrionaux; la prise varie considérablement d'année en année. La montée du saumon commence vers la fin de juillet et atteint son apogée dans les premières semaines d'août; néanmoins, les régions septentrionales ont une saison plus hâtive. Le saumon de printemps ou quinnat est un très gros poisson; c'est la première espèce qui fut mise en boîte aux Etats-Unis; la migration de ce poisson s'opère au commencement du printemps et se continue jusqu'en juillet. Le saumon argenté est plus petit; comme le dos bleu, il voyage par bandes innombrables, pendant septembre et octobre, dans le fleuve Fraser, et un peu plus tôt dans les cours d'eau plus au nord. Le saumon bécard est mis en boîte et une quantité considérable est salée pour l'exportation en Orient. Le saumon rose, lui aussi, suit le dos bleu. Le plus grand nombre de personnes qu'occupe cette pêche sont des Chinois, des Japonais et des Indiens, les Chinois étant surtout employés dans les usines, tandis que les Indiens et les Japonais se consacrent plutôt aux opérations de pêche.

Le flétan abonde à hauteur de l'île Vancouver et entre les îles de la Reine Charlotte et le continent; quoique la première tentative d'exploitation industrielle de ce poisson ait avorté, dès 1903 la Colombie Britannique contribuait pour 10,000,000 de livres à la production de 25,000,000 de livres pêchées sur le littoral du Pacifique, au nord de la Californie, chiffre qui a triplé depuis plusieurs années, bien que depuis 1930 cette pêche ait diminué à la suite des restrictions imposées en vertu des dispositions du traité conclu entre le Canada et les Etats-Unis pour la conservation de ces pêcheries. La prise annuelle de hareng de la Colombie Britannique représente environ 56 p.c. de tout le hareng de mer pêché dans les eaux canadiennes. Ce poisson est presque en entier salé à sec et exporté en Chine et au Japon. Depuis quelques années, la pêche au pilchard a pris une certaine importance, la plus grande partie de la prise allant aux huileries qui produisent chaque année de grandes quantités d'huile et de poudre de poisson. On y pêche aussi la baleine et deux stations sont en opération dans les îles Reine Charlotte. On y pêche des cétacés de différentes sortes; baleines franches, rorquals, dauphins et cachalots. La pêche à la baleine se pratique dans des bateaux rapides armés de canons lance-harpon Svend Foyn, système venu de Norvège. Aucune partie de la baleine ne se perd, l'huile et la poudre ou engrais en sont les produits les plus importants. La morue-lingue, la morue noire, l'oulachon, la plie, la raie, la sole, la clovisse et l'huître sont également abondants dans les eaux de la Colombie Britannique.

Il convient d'ajouter un mot concernant les pêcheries de phoque à fourrure du Pacifique dont le siège historique était autrefois à Victoria. Au début du siècle actuel, par suite de la raréfaction des animaux, cette industrie n'avait plus qu'une bien faible importance, et en 1911 un traité fut conclu entre la Grande-Bretagne, les Etats-Unis, le Japon et la Russie, à l'effet d'interdire la pêche pélagique, ou hauturière. Ce traité, qui est resté en vigueur, a pour objet la conservation du phoque et il en est résulté un accroissement considérable des bandes de ces animaux. A titre de compensation pour la renonciation à ses droits de pêche au phoque, le Canada touche annuellement des gouvernements des Etats-Unis, du Japon et de la Russie, une part du revenu de la pêche du phoque aux îles Pribaloff et à d'autres endroits, appartenant à ces trois pays, où se trouvent des colonies de phoques. Les Indiens de la Colombie Britannique sont exempts des dispositions de ce traité, mais ils ne peuvent pratiquer ce genre de chasse qu'à l'aide de bateaux non pontés, dont chacun ne peut avoir un équipage de plus de cinq personnes, l'emploi d'armes à feu leur étant interdit.

Le sport de la pêche.—*Nous n'avons envisagé jusqu'ici les pêcheries qu'au point de vue purement industriel et commercial; mais le sport lui-même comporte un aspect économique dans un pays où foisonnent des poissons aussi réputés que le saumon de la Restigouche et autres rivières du Nouveau-Brunswick, l'achigan et la truite mouchetée du Québec et des hautes terres d'Ontario, la truite rouge du*

Nipigon et le saumon et la truite arc-en-ciel de la Colombie Britannique. Le gouvernement perçoit des revenus fort élevés en louant soit à des clubs, soit à des particuliers, le droit de pêche dans les lacs et les cours d'eau des contrées les moins peuplées; d'autre part, des centaines de guides y trouvent une occupation rémunératrice pendant les mois d'été.

Le gouvernement et les pêcheries.—*Au début de la Confédération le gouvernement fédéral administrait directement la marine et les pêcheries du Canada; un ministre du Cabinet exerçait cette juridiction au moyen d'un personnel considérable d'inspecteurs, de surveillants et de gardes-pêche, en vue de la mise en vigueur des lois régissant les pêcheries. Jusqu'à 1930 le même ministère a régi en même temps la marine et les pêcheries mais on divisa le travail cette année-là et l'on créa un ministère des Pêcheries chargé, sous la direction d'un ministre du cabinet, d'administrer les pêcheries du Dominion. Des décisions judiciaires intervenues en 1882, 1898, 1913 et 1920 ont sensiblement modifié la juridiction du Gouvernement fédéral à l'avantage des provinces, et en 1922 il y eut de nouveaux changements lorsque le Gouvernement fédéral transféra à la province de Québec l'administration des pêcheries de cette province, sauf celles des Iles de la Madeleine, et en 1930, alors que les pêcheries du Manitoba, de la Saskatchewan et de l'Alberta furent transférées, en même temps que d'autres ressources naturelles, aux gouvernements de ces provinces. Aujourd'hui, le Dominion contrôle les pêcheries en eau salée des provinces Maritimes et de la Colombie-Britannique et celles des Iles de la Madeleine dans la province de Québec. Les pêcheries intérieures d'Ontario et des provinces Maritimes et les pêcheries, tant en eau douce qu'en eau salée, du Québec (sauf celles des Iles de la Madeleine) sont contrôlées par ces provinces respectivement, mais le Gouvernement fédéral possède seul le droit de légiférer sur toutes les matières concernant la pêche dans tout le pays. Les dépenses encourues par les pêcheries et payées par le Dominion au cours de l'exercice clos le 31 mars 1936 s'élèvent à $1,710,345; les recettes de cette même source se chiffrent à $167,862.*

Conservation.—*Les pêcheries fluviales et lacustres incontestablement, et les pêcheries maritimes probablement, si elles étaient abandonnées à elles-mêmes, subiraient la loi économique de l'appauvrissement. Pour combattre cette tendance le gouvernement canadien dut légiférer, interdisant le pêche en certaines saisons, la pollution des rivières et l'obstruction de leur cours; il dut aussi spécifier les dimensions des mailles de filets, réglementer les agrès et les opérations de pêche. En outre, il a été créé un système de pisciculture qui possédait, en 1935, 23 frayères, 11 viviers auxiliaires, 9 bassins à saumon et plusieurs stations de cueillette des œufs, ayant coûté $231,037, et ayant distribué 145,878,304 œufs, alevins et poissons des espèces saumon et truite. Ces alevins sont distribués gratuitement et placés dans les eaux qui leur conviennent le mieux.*

Recherches scientifiques.—*A Halifax, N.-E., St. Andrews, N.-B., et Nanaïmo et Prince-Rupert, C.B., se trouvent des stations sous la direction du Service Biologique du Dominion pour l'étude des nombreux problèmes complexes inhérents aux pêcheries. Les stations de St. Andrews et de Nanaïmo s'occupent principalement des problèmes de pisciculture et les stations expérimentales d'Halifax et Prince-Rupert consacrent leur attention aux problèmes de l'industrie poissonnière. A Ellerslie, Ile du Prince-Edouard, se trouve une station biologique marine s'occupant d'ostréiculture, et une sous-station, à Cultus Lake, Colombie Britannique, s'occupe tout spécialement de recherches concernant le saumon. Le Service Biologique du Canada emploie un personnel permanent de techniciens, et en plus, des expérimentateurs bénévoles attachés à diverses universités canadiennes prêtent de temps à autre leurs services, lorsque besoin en est. Ce sont surtout des professeurs et des techniciens experts. Les habitudes et coutumes des poissons comestibles, la bactériologie du poisson frais ou conservé, l'amélioration des méthodes de manutention et de préparation du poisson, et de nombreux autres problèmes pratiques ont fait le sujet d'importants mémoires et rapports scientifiques.*

Aide directe.— *Dans le domaine de l'aide directe, outre le paiement des primes aux pêcheurs, dont il est question dans un autre paragraphe, le gouvernement adopte différentes mesures de temps à autre. En 1927 le ministère des Pêcheries a inauguré un service de transport du poisson embrassant plusieurs sections de la côte de l'Atlantique. Ce service, discontinué depuis, avait pour objet de donner une plus grande extension aux régions où les pêcheurs avaient accès aux marchés du poisson frais. En outre, pendant plusieurs saisons, un service de transport du homard fut maintenu entre la partie orientale de la Nouvelle-Ecosse et le Massachusetts, en vertu de mesures prises par le ministère; ce service visait à donner plus d'ampleur au commerce de homards vivants dans les districts de la Nouvelle-Ecosse où, faute de moyens de transport convenables, il n'avait pu se faire avec succès sur une échelle de quelque importance. Cette initiative a démontré la praticabilité de ces envois, au point de vue commercial, pour les producteurs de l'est de la Nouvelle-Ecosse, et a amené l'établissement de services dirigés par des particuliers. Une autre initiative destinée à rendre de grands services aux pêcheurs est l'établissement d'un système de radio pour émettre des rapports sur les probabilités de température, les approvisionnements de boitte et de glace le long des côtes et les prix du marché aux poissons. Pendant la saison, ces rapports sont irradiés deux fois par jour d'Halifax et de Louisbourg, et les rapports de température sont également irradiés de Saint John. Comme la plupart des vaisseaux de pêche ont maintenant des appareils récepteurs, ce service est d'une grande valeur. Les informations télégraphiques sur les approvisionnements de boitte à la côte sont aussi irradiées par le département des Pêcheries et affichées dans nombre de ports les mois de printemps et d'été.*

Outre les travaux éducatifs qu'accomplissent les inspecteurs attitrés du ministère des Pêcheries en donnant des conseils aux pêcheurs de diverses régions quant aux meilleures méthodes de préparation de leur poisson, le ministère a stationné dans différents districts des instructeurs spéciaux qui ont mission d'expliquer certains procédés particuliers concernant la préparation du poisson. Des cours et des conférences pour le bénéfice des pêcheurs et des directeurs et contremaîtres de homarderie ont également été donnés à des stations maintenues par le Service biologique. Le gouvernement emploie aussi un expert dans la cuisson du poisson qui visite les grands centres et donne des conférences sur les qualités alimentaires du poisson et des démonstrations des différentes manières de l'apprêter pour la table. Une flotte de petites canonnières circule dans les eaux côtières, aussi bien que dans les eaux intérieures, pour assurer l'application des règlements de la pêche et prévenir le braconnage. Depuis plusieurs années on fait aussi dans les stations scientifiques du gouvernement des recherches et des expérimentations sur la pêche et les productions poissonnières. Cette partie des activités du gouvernement fait l'objet du paragraphe qui précède.

Problèmes internationaux.—*Une région de pêche aussi riche que celle du nord de l'Atlantique ne pouvait manquer d'attirer les pêcheurs d'autres pays et d'anciennes coutumes se transformèrent en droits acquis, dont quelques-uns durent encore, notamment le séchage de leurs prises par les pêcheurs français sur les rivages de Terre-Neuve. Autrement grave est la question des droits des Etats-Unis dont les pêcheurs, durant la période coloniale, approvisionnaient de poisson la Nouvelle-Angleterre et à qui le traité de Versailles de 1783 reconnut le droit de pêcher dans les eaux côtières du Canada. La guerre de 1812 leur fit perdre cette prérogative, si bien qu'après 1818, les Etats-Unis n'avaient d'autres droits que ceux de faire escale dans les ports canadiens pour s'y abriter ou s'y approvisionner de bois ou d'eau, ou y réparer leurs embarcations de pêche autour des îles de la Madeleine et sur la rive du golfe Saint-Laurent, à l'est de Pointe-Jolie; enfin de faire sécher et de préparer leur poisson dans les havres, baies et anses non habités de cette partie de la rive nord. L'interprétation des clauses du traité de 1818 souleva maintes querelles apaisées par le traité de réciprocité (1854-1866). Par ce dernier traité, le poisson canadien et ses sous-produits entraient*

en franchise aux Etats-Unis et vice versa; de plus, les pêcheurs des Etats-Unis obtenaient le droit de pêche dans les eaux territoriales canadiennes de l'Atlantique, les pêcheurs canadiens étaient autorisés à pêcher dans certaines eaux territoriales des Etats-Unis, sur le même littoral, à l'exclusion dans les deux cas des cours d'eau et de leurs estuaires. Les crustacés, mollusques et coquillages étaient exceptés. Le traité de Washington de 1871 confirma le traité de réciprocité de 1854 en ce qui concerne les pêcheries et pourvut à la nomination d'une commission d'arbitrage devant déterminer le chiffre de l'indemnité à payer par les Etats-Unis à la Grande-Bretagne, en raison des concessions par elle consenties. Cette commission siégea à Halifax en 1877 et y rendit une sentence arbitrale fixant cette indemnité à $5,500,000, dont $1,000,000 étaient attribués à Terre-Neuve. Cependant, en 1885, les Etats-Unis dénoncèrent les clauses de ce traité se rapportant à la pêche et cette action fut suivie d'une période de désaccord entre les deux pays. Une convention signée en 1888 porte le nom de "Traité non ratifié de 1888." Les plénipotentiaires qui l'ont négocié étaient tombés d'accord sur les points suivants: Les bateaux de pêche des Etats-Unis recevraient annuellement et gratuitement des licences les autorisant à pénétrer dans les ports canadiens, à y acheter des provisions et des agrès, à transborder leurs prises et à embarquer des équipages. C'est ce traité qui donna naissance aux "licences de modus vivendi." Les négociateurs du traité ayant reconnu qu'il ne pouvait être ratifié par les deux gouvernements avant l'ouverture de la saison de pêche, décidèrent comme mesure transitoire, et ne devant pas durer plus de deux ans, que les bateaux de pêche des Etats-Unis, sur paiement d'un droit de $1.50 par tonneau, pourraient exiger l'émission d'une licence leur accordant le bénéfice des dispositions ci-dessus énumérées. Le Sénat des Etats-Unis rejeta ce traité; néanmoins, le gouvernement canadien continua à émettre des "licences de modus vivendi" jusqu'en 1918, date à laquelle des arrangements furent faits assurant des privilèges réciproques aux pêcheurs des deux pays dans les ports de leur voisin, mais les effets de cette entente—qui était une mesure spéciale de guerre du gouvernement des Etats-Unis —cessèrent le 1er juillet 1921. L'année suivante, on dut recourir de nouveau aux "licences de modus vivendi," mais à la fin de l'année 1923 elles disparurent. Depuis lors on est revenu aux dispositions du traité de 1818. En 1933 un nouvel arrangement fut conclu relativement à l'émission de "licences de modus vivendi" par le Canada aux pêcheurs des Etats-Unis, et il est resté en vigueur jusqu'à maintenant.

Dans les Grands Lacs également les problèmes les plus importants, tels que le repeuplement et la disposition du poisson, ont nécessairement un caractère international et se compliquent du nombre d'Etats intéressés. Une situation analogue a surgi en Colombie Britannique, où les industriels du Puget Sound capturent le saumon dos bleu du fleuve Fraser en quantités beaucoup plus considérables que les pêcheurs du Canada et ce, au moyen de pièges et autres méthodes interdites dans les eaux canadiennes. En 1906, une commission internationale fit le premier pas vers une entente sur cette question vitale; en 1922 une commission parlementaire recommandait la prohibition de la pêche de ce saumon dans les eaux du Fraser, pendant cinq ans, comme mesure de conservation. Les gouvernements des deux pays étudient encore la question.

La pêche au flétan de notre côte du Pacifique ne peut se faire que par les ports du Canada ou des Etats-Unis, mais comme elle se pratique principalement en dehors des eaux territoriales, aucun des deux pays ne pourrait la contrôler seul. En même temps, il est de l'intérêt des deux pays de la maintenir florissante et permanente. C'est pourquoi l'étude des moyens à adopter pour la protection de ce poisson a été confiée à la conférence canado-américaine des pêcheries nommée en 1918 par les deux pays pour étudier toutes les questions importantes relatives à la pêche entre les deux pays. En 1922, le Canada a proposé que la question du flétan fût étudiée séparément. La suggestion ayant été bien accueillie, il en est résulté le traité du 2 mars 1923 "pour la protection du flétan du Pacifique." En vertu de ce traité, la pêche au flétan est interdite pendant un certain temps chaque année.

Primes.—*Une conséquence directe mais fort importante du traité de Washington subsiste encore aujourd'hui. Une loi de 1882 (45 Vict., c. 18), pour le développement des pêcheries maritimes et l'encouragement à la construction des navires de pêche, a consacré une somme annuelle de $150,000, représentant l'intérêt sur le montant de la sentence arbitrale d'Halifax, à la distribution de primes aux propriétaires de bateaux de pêche et à leurs équipages. Une autre loi, votée en 1891 (54-55 Vict., c. 42) éleva ces primes à $160,000, les détails de leur distribution étant réglés chaque année par arrêté ministériel.*

Industrie moderne.—*L'industrie poissonnière du Canada, telle qu'elle existe actuellement, est le fruit des efforts accomplis depuis un siècle. En 1844, la valeur des prises n'était estimée qu'à $125,000; elle doubla dans la décade suivante, et dès 1860, elle dépassait $1,000,000. Dix ans plus tard, elle atteignait $6,000,000, chiffre plus que doublé en 1878. Dans les 90, elle dépassait $20,000,000 et touchait à $34,000,000 en 1911. Elle atteignit son apogée en 1918 avec une production de plus de $60,000,000, mais c'était alors une époque d'inflation considérable des prix. En 1930 vint la crise économique, qui sévit dans le monde entier et l'industrie atteignit en 1932 le point le plus bas auquel elle soit descendue pendant les 25 dernières années avec un total un peu inférieur à vingt-six millions. Depuis lors chaque année a marqué un progrès et en 1935 la valeur s'est élevée à $34,427,854. Il est entendu que ces chiffres représentent la valeur totale du poisson vendu soit frais, soit séché, soit en conserve ou autrement préparé. Le nombre des employés a augmenté en même temps en proportion égale. Il s'est élevé à plus de 90,000 certaines années. Le capital engagé s'est élevé d'ailleurs jusqu'à $64,000,000. En 1935, le nombre des employés fut de 82,918 et le capital immobilisé s'est élevé à $43,617,888. On estime à plus de 21 livres la consommation annuelle de poisson au Canada per capita.*

Entre tous les poissons, la morue et le saumon se disputèrent longtemps la primauté mais depuis 1895 le saumon tient définitivement la première place et la quantité de homard et son prix élevé ont plus d'une fois, ces dernières années, relégué la morue au troisième rang. La valeur de la production de la pêche au saumon de 1869 à 1935 est d'environ 448 millions de dollars et celle de la pêche à la morue, de 287 millions. Cela a modifié, bien entendu, le rang des provinces entre elles, la Colombie-Britannique occupant maintenant la première place qui appartenait auparavant à la Nouvelle-Ecosse.

Commerce.—*On a déjà vu que la consommation domestique de poisson est relativement minime au Canada et que cette industrie dépend largement des marchés de l'étranger. On peut évaluer approximativement à 60 ou 70 pour cent des prises annuelles la portion exportée, dont les Etats-Unis absorbent approximativement un-tiers et la Grande-Bretagne un-quart. Pendant l'année civile 1935 les exportations totales se sont élevées à $24,859,486, dont $10,321,296 pour les Etats-Unis, et $6,759,505 pour la Grande-Bretagne. Le plus important des poissons exportés est le saumon en boîte (expédié en Grande-Bretagne et aux marchés européens), suivi par le homard en boîte, et par le homard frais, tandis que la morue salée à sec (Antilles et Amérique du Sud) est quatrième. Pour le poisson frais, spécialement le corégone et le homard, les Etats-Unis constituent le principal débouché. En définitive, les exportations de poisson du Canada ne le cèdent qu'à celles de la Grande-Bretagne et de la Norvège, mais si l'on y joint les exportations de Terre-Neuve, elles excèdent l'une et l'autre. En 1935, le Canada a importé pour $2,597,856 de poisson.*

STATISTIQUES DES PÊCHERIES DU CANADA, 1935

La valeur globale des produits poissonniers du Canada en 1935 est de $34,427,854, comparativement à $34,022,323 en 1934 et $27,496,946 en 1933. Ces chiffres représentent la valeur de tous les produits tels que mis sur le marché, qu'ils aient été vendus pour consommation à l'état frais, ou qu'ils aient subi un traitement ou une transformation quelconques dans une usine ou au domicile des pêcheurs. Le tableau qui suit montre les prises et la valeur marchande des principaux poissons commerciaux (dont la pêche a donné une valeur de $100,000 ou plus) les cinq dernières années, avec une indication dans la dernière colonne de l'augmentation ou diminution en 1935 comparativement à 1934.

(a) Pris et débarqué. (b) Valeur des ventes.

(c) Antérirurement à 1934, les totaux concernant le flétan comprenaient les prises débarquées dans des ports de la Colombie-Britannique par des vaisseaux des Etats-Unis, alors que depuis 1934 les débarquements américains sont exclus des statistiques, les chiffres se rapportant uniquement aux prises débarquées par des vaisseaux canadiens. Voir renvoi page 134, pour les prises débarquées par des navires américains en 1935.

(d) Comprise avec mactre antérieurement à 1935.

REVUE DES PÊCHERIES, 1935

Le poisson pêché dans tout le Canada en 1935 s'élève à 953,201,600 livres. Cette somme comprend le poisson de mer et le poisson de toutes les eaux intérieures où l'on fait la pêche en vue du commerce. L'année précédente, la prise totale avait atteint 933,086,900 livres. Le Nouveau-Brunswick, l'Ontario, la Saskatchewan, l'Alberta, la Colombie-Britannique et le Yukon ont annoncé des augmentations dans les prises. Il y a eu de légères diminutions dans les autres provinces.

La valeur marchande de la pêche dans toutes les provinces s'élève à $34,427,854, soit une augmentation de $405,531 sur la valeur globale de l'année précedente qui était de $34,022,323.

Grande pêche.—La pêche au saumon est la branche la plus considérable et la plus importante de l'industrie au point de vue de la valeur marchande. La péche au homard et la pêche à la morue viennent respectivement en deuxième et troisième lieux. Le corégone est l'espèce la plus importante de poisson pêché dans les eaux intérieures. Pendant l'année qui fait l'objet de ce rapport, la prise totale de saumon a été de 182,420,500 livres ayant une valeur marchande de $12,540,307. La plus grande partie de la prise a été faite sur le littoral du Pacifique. On fait la pêche au homard et à la morue surtout sur le littoral de l'Atlantique; on ne prend que peu de homard et pas du tout de morue sur le littoral du Pacifique. La prise du homard pendant l'année a été de 31,996,900 livres ayant une valeur marchande de $4,378,742 et celle de la morue, de 153,915,000 livres ayant une valeur marchande de $2,758,140. La prise totale de corégone a été de 14,745,600 livres dont la valeur marchande a été de $1,432,072.

NOUVELLE-ÉCOSSE

Les pêcheurs de la Nouvelle-Ecosse ont pris en tout 235,357,700 livres de poisson et de mollusques et crustacés pendant l'année, comparativement à 238,003,300 l'année précédente. La valeur marchande globale d'autre part a augmenté de $179,034 et a atteint la somme de $7,852,899, comparativement à celle de $7,673,865 en 1934. Au point de vue de la valeur marchande, la pêche au homard occupe le premier rang en Nouvelle-Ecosse; la prise en 1935, qui a été de 17,683,600 livres, a eu une valeur marchande de $2,732,872. Il y a quelques années, la pêche à la morue rapportait plus que la pêche au homard mais leurs positions réciproques ont été renversées en 1930 et depuis lors c'est le homard qui a le plus de valeur. Les pêcheurs de la Nouvelle-Ecosse ont pris l'an dernier 92,439,100 livres de morue ayant une valeur marchande de $1,809,273, soit une diminution de 8,228,200 livres; pour ce qui est de la valeur, elle a baissé de $259,293. La pêche à l'églefin est la troisième par ordre d'importance dans les pêcheries de la Nouvelle-Ecosse et elle a donné au cours de l'année une prise de 35,634,200 livres qui ont eu une valeur marchande de $1,104,133. Sous chacun des chefs les chiffres sont plus élevés que l'année précédente. La prise de hareng et de flétan a été plus considérable mais celle de maquereau a été inférieure. La prise d'espadon, poisson auquel on ne fait la pêche au Canada que sur les côtes de la Nouvelle-Ecosse, a été plus considérable que jamais l'an dernier; la prise totale a atteint 2,233,900 livres. La valeur marchande de cette prise étant de $264,097, l'augmentation est de $87,457 sur celle de 1934. La prise de saumon a été de 603,000 livres, c'est-à-dire un peu inférieure â celle de l'année précédente. On a récolté 5,375 barils d'huîtres, soit une augmentation de 2,141 barils. La récolte de pétoncles a aussi considérablement augmenté; elle a donné un total de 126,371 gallons, sortis des coquilles, soit une augmentation de 53,235 gallons. La production de farine de poisson pendant l'année s'est élevée à 4,525 tonnes; elle a donc été un peu moindre que l'année précédente.

NOUVEAU-BRUNSWICK

La prise totale de poisson, de mollusques et crustacés en mer et dans les eaux intérieures, au Nouveau-Brunswick, a été de 139,028,000 livres ayant une valeur marchande de $3,949,615. La prise avait été de 135,738,900 livres l'année précédente et la valeur marchande, de $3,562,082. Dans les pêcheries maritimes les prises de morue, de hareng, d'éperlan et de clovisse ont accusé des augmentations de même que la prise d'alose parmi les pêcheries faites dans les eaux intétieures. La prise de sardine a subi une diminution relativement petite mais sa valeur marchande a augmenté de $297,090. La prise de morue, qui a été de 14,984,800 livres, accuse une augmentation mais sa valeur marchande a diminué. Les prises de saumon ont été de 1,656,200 livres (saumon pris en mer: 1,607,600 livres; dans les eaux intérieures: 48,600 livres), comparativement à 1,858,400 livres en 1934. La pêche en eau douce a donné une prise globale de 491,100 livres. Dans cette prise l'alose est de beaucoup l'espèce la plus importante au double point de vue de la quantité et de la valeur marchande. La prise d'alose a été de 323,800 livres, soit une augmentation de 49,600 livres sur le total de 1934.

ÎLE DU PRINCE-ÉDOUARD

Pendant l'année, les pêcheurs de l'Ile du Prince-Edouard ont pris 20,891,800 livres de poisson, crustacés et mollusques, ayant une valeur marchande de $899,685. En chiffres ronds, les totaux de l'année représentent une diminution de la quantité 2,434,000 livres et une diminiution de la valeur marchande de $64,000. La pêche au homard, la plus importante des pêcheries de l'île, a donné une prise de 6,387,000 livres ayant une valeur marchande de $605,107. L'année précédente, la prise de homard avait été de 7,658,000 livres et sa valeur marchande, de $674,186. A la suite du homard viennent par ordre d'importance dans l'Ile du Prince-Edouard la morue, les huîtres, le hareng et l'éperlan. En 1935, l'éperlan a été la seule de ces espèces dont la prise ait augmenté en quantité et en valeur marchande. La morue et les huîtres ont rapporté un peu plus qu'en 1934 bien que les prises aient accusé une diminution. La prise aussi bien que la valeur marchande du hareng ont diminué.

QUÉBEC

La production des pêcheries du Québec, tant en mer que dans les eaux intérieures, a eu une valeur marchande de $1,947,259 l' an dernier, comparativement à $2,306,517 en 1934. La valeur sur le marché du poisson de mer et des crustacés et mollusques a été de $1,328,394, soit une diminution de $388,754 sur le total de l'année précédente. La valeur marchande de la prise de poisson d'eau douce a été de $618,865, soit une augmentation de $29,496 sur le produit de 1934. La pêche tant en eau salée que dans les eaux intérieures a donné un total de 89,621,900 livres, soit une diminution de 16,940,400 livres. Les pêcheurs en mer ont pris surtout de la morue et la prise de cette espèce a subi une forte diminution à la fois au point de vue du volume et à celui de la valeur marchande. La prise, de 40,276,900 livres, a été de 11,586,900 moins considérable que celle de l'an dernier et une diminution de $299,877 a fait descendre sa valeur marchande à $609,423. La prise de homard a été de 2,442,600 livres, comparativement à 3,574,700 livres l'année précédente et sa valeur marchande, de $222,064, a accusé une diminution de $73,836. La prise de hareng de mer s'est élevée à 28,640,500 livres et sa valeur marchande a été de $211,459, soit une diminution sous les deux chefs. On peut noter que la valeur marchande globale de la production de morue, de homard et de hareng pendant l'année

s'élève à la proportion de 78 p. 100 du total des pêcheries maritimes du Québec. Les pêcheurs du Québec prennent, bien entendu, en plus de celles qu'on a nommées d'autres espèces de poisson de mer et le maquereau, le saumon et l'éperlan ont été pris en quantités plus considérables l'an dernier; les prises de maquereau ont augmenté de 2,883,800 livres à 3,564,000 livres. Dans les eaux intérieures, on a pris l'anguille, la perche, le doré et le saumon en quantités un peu plus petites que pendant l'année précédente, quoique la valeur marchande de l'anguille et du doré ait augmenté.

ONTARIO

La prise de poissons de toutes sortes en Ontario a été de 35,213,100 livres ayant une valeur marchande de $2,852,007. Cela représente une augmentation à la fois de la production et de la valeur marchande, la première s'étant accrue de 3,982,500 livres et la dernière de $633,457. Les prises de sandre, de barbotte, d'anguille, de perche, de doré, de brochet, d'esturgeon, de truite et de corégone ont augmenté. Quatre espèces, la truite, le corégone, la perche et la sandre ont donné une valeur totale de plus de $2,000,000. Les prises de truite, qui ont été de 6,256,300 livres, accusent une augmentation de presque un million de livres pour ce qui est de la quantité et leur valeur marchande, qui a été de $738,243, s'est accrue de presque $183,000 sur celle de l'année précédente. La prise de corégone, qui vient en deuxième lieu par ordre d'importance au point de vue du revenu, a été de 5,478,300 livres et sa valeur marchande, de $684,789, soit une augmentation de 555,300 livres sur la production de l'année précédente et de $89,106 sur la valeur de cette dernière production. La prise de hareng, qui s'est élevée à 2,529,100 livres, compte parmi les quelques espèces qui ont accusé un fléchissement, la diminution ayant été de 347,000 livres.

MANITOBA

Dans le Manitoba, la production globale de poisson, l'année dernière, a été de 19,696,000 livres ayant une valeur marchande de $1,258,335. Le doré, le corégone, le sauger, le tullipi, l'œil-d'or sont par ordre d'importance les principales espèces de poisson qui ont été prises. La prise de doré, de 7,218,300 livres ayant une valeur marchande de $498,958, a été de 1,126,500 livres inférieure à celle de 1934 et sa valeur marchande a subi une diminution de $54,546. Les prises de corégone, de tullipi, de perche et de sauger ont aussi accusé une diminution, mais la prise de brochet a été supérieure à celle de l'année précédente. La prise de corégone s'est élevée à 3,787,800 livres d'une valeur marchande de $376,121. La diminution de la prise de cette espèce a été de 1,109,000 livres et celle de la valeur marchande de $46,639.

SASKATCHEWAN

On a pris 4,953,100 livres de poisson pendant l'année en Saskatchewan et la valeur marchande de cette prise a été de $252,059. Cela représente une augmentation de la production de 914,800 livres et un accroissement de la valeur marchande de $32,287. La prise de corégone, l'espèce la plus importante, s'est élevée à 3,320,200 livres ayant une valeur marchande de $187,949, soit une augmentation de la prise de 789,700 livres et un accroissement de la valeur marchande de $25,626. Parmi les autres principales espèces de poisson prises, le doré, le tullipi et le brochet accusent des augmentations au double point de vue de la production et de la valeur marchande. La production et la valeur de la pêche à la truite ont diminué.

ALBERTA

Les pêcheurs de l'Alberta ont pris en 1935, 4,156,700 livres de poisson. La valeur marchande de cette prise s'est élevée à $225,741. Ces chiffres représentent une légère augmentation de la prise mais une diminution de la valeur. On a pris surtout du corégone, du doré, du brochet et du tullipi. La prise de corégone, de 1,750,800 livres, a un peu diminué de même que sa valeur marchande, qui s'est élevée à $146,113. Les prises de brochet et de tullipi, dont la première a été de 976,200 livres et la seconde de 466,700 livres, ont été plus considérables que celles de 1934 mais d'un autre côté la prise de doré, qui s'est élevée à 531,600 livres, a diminué de 414,900 livres.

COLOMBIE BRITANNIQUE

On trouvera à la page 242 un exposé de la pêche en Colombie-Britannique sous la rubrique "Pêcheries de la côte du Pacifique."

YUKON

Les pêcheries du Yukon ne sont pas très considérables et la prise totale en 1935 s'est élevée à 104,500 livres ayant une valeur marchande de $20,725. La prise du saumon compte pour la moitié de la prise totale et de sa valeur marchande.

PÊCHERIES MARITIMES DE L'ATLANTIQUE

Les prises de poisson, de mollusques et crustacés sur le littoral de l'Atlantique ont donné un total de 475,469,300 en 1935, soit une diminution de 19,307,300 sur celles de l'année précédente. Le tableau ci-dessous donne les prises par province:

	1935 livres	1934 livres
Ile du Prince-Edouard	20,891,800	23,326,200
Nouvelle-Ecosse	235,357,700	238,003,300
Nouveau-Brunswick	138,536,900	135,258,700
Québec	80,682,900	98,188,400
Prises globales	475,469,300	494,776,600

Morue, églefin, merluche et lotte et gade:—Les prises totales de ces espèces de poisson ont été de 216,268,900 livres, comparativement à 238,853,200 livres en 1934; la valeur marchande d'autre part a été de $4,135,460, comparativement à $4,712,375. Voici quelles ont été les prises de chaque espèce: la morue, 152,245,900 livres; l'églefin, 36,842,600 livres; la merluche et la lotte, 18,975,600 livres; et le gade, 8,204,800 livres. Le Nouveau-Brunswick a été la seule province où la prise de morue a accusé une augmentation et la Nouvelle-Ecosse a été la seule où les prises d'églefin ont augmenté. Dans l'Ile du Prince-Edouard et dans le Québec les prises de merluche et de lotte ont augmenté et la prise de gade a été plus considérable que l'année précédente dans le Nouveau-Brunswick. La prise d'églefin en Nouvelle-Ecosse, qui en est la plus grande productrice, a été de 35,634,200 livres, soit une augmentation de presque un million et demi de livres. La valeur marchande totale de l'églefin, qui s'est élevée à $1,129,695, est légèrement supérieure à celle de 1934. La production de poisson séché a été de beaucoup inférieure à cause de l'impossibilité dans laquelle se trouvent les producteurs de vendre le poisson séché en aussi grandes quantités qu'auparavant. La production de poisson séché, le poisson désossé non compris, s'est élevée à 28,956,500 livres, comparativement à 35,220,200 livres l'année précédente.

Hareng, maquereau et sardine:—Bien que la prise totale de ces espèces ait été un peu moindre que celle de 1934, la valeur en a été un peu supérieure à cause de l'augmentation des prix du hareng et des sardines. La prise totale de hareng, de 101,727,700 livres, a été inférieure à celle de l'année précédente mais la valeur marchande, de $1,116,109, a été de $78,000 plus élevée. La prise de maquereau s'est élevée à 16,049,500 livres ayant une valeur marchande de $308,721, soit une double diminution, Pour ce qui est des sardines, on en a pris 187,666 barils ayant une valeur marchande de $1,335,798; la prise a été un peu inférieure à celle de 1934 mais elle a rapporté $296,796 de plus. On pêche les sardines surtout dans le Nouveau-Brunswick et un peu dans le Québec. La prise de hareng a été plus considérable au Nouveau-Brunswick et en Nouvelle-Ecosse que l'année précédente et la prise de maquereau a accusé une augmentation dans le Québec.

Carrelet, flétan et espadon:—Les prises d'espadon et de flétan ont accusé une augmentation de même que leur valeur marchande s'est accrue; quant à la prise de carrelet, elle a augmenté mais sa valeur marchande a diminué. La Nouvelle-Ecosse est la seule productrice d'espadon et la prise a été de 2,233,900 livres, ce qui constitue un record et une augmentation de 824,800 livres sur celle de l'année précédente; la valeur marchande, ayant augmenté de son côté de $87,457, a atteint la somme de $264,097. La prise de carrelet sur le littoral atlantique a été de 864,400 livres ayant une valeur marchande de $26,624. Dans l'Ile du Prince-Edouard, la prise de carrelet a fait un bond de 15,500 livres qu'elle était en 1934 à 130,300 livres, celle du Nouveau-Brunswick, ayant été de 199,900 livres en 1935, accuse une légère augmentation sur celle de l'année précédente. La prise en Nouvelle-Ecosse a été de 529,700 livres, c'est-à-dire un peu moindre que celle de 1934; dans le Québec aussi la prise, de 4,500 livres, a été moins considérable. La prise totale de flétan sur la côte de l'Atlantique s'est élevée à 3,020,300 livres ayant une valeur marchande de $374,725. Sur ce total, on a pris 2,903,500 livres en Nouvelle-Ecosse et 108,300 livres dans le Québec. Les pêcheurs du Nouveau-Brunswick ont pris le reste.

Espèces frayant dans les rivières.—Québec est la seule des quatre provinces, où la prise de saumon ait accusé une augmentation. La prise de saumon totale sur le littoral a été de 3,270,500 livres ayant une valeur marchande de $406,246, soit une double diminution. La prise du Québec a été de 1,053,600 livres, celle du Nouveau-Brunswick, de 1,607,600 livres, et celle de la Nouvelle-Ecosse, de 603,000 livres. La prise d'éperlan a atteint le total de 7,729,900 livres ayant une valeur marchande de $570,745, soit une double augmentation. Le Nouveau Brunswick est la province où l'on prend le plus d'éperlan et sa prise de 5,273,900 livres en 1935 accuse un accroissement de plus de 1,500,000 livres sur celle de 1934. L'Ile du Prince-Edouard vient en second lieu avec 1,001,500 livres d'éperlan; le Québec vient ensuite avec 835,900 livres puis la Nouvelle-Ecosse, avec 618,600 livres. La prise d'éperlan n'a subi de recul qu'en Nouvelle-Ecosse. Les pêcheurs des trois Provinces Maritimes ont pris un total de 8,225,600 livres de gasparot mais il n'y a pas eu de prise de cette espèce dans le Québec. La valeur marchande s'est élevée à $97,214. La prise du Nouveau-Brunswick a été de 4,813,900 livres; celle de la Nouvelle-Ecosse, de 3,314,300 livres; et celle de l'Ile du Prince-Edouard, de 97,400 livres.

Homard.—La prise de homard a accusé une diminution considérable, ayant été de 31,996,900 livres comparativement à 36,199,200 livres en 1934. Les prises ont diminué dans chacune des quatre provinces. Bien que la prise totale ait été moindre, la valeur marchande s'est accrue de $108,978. L'augmentation du revenu vient du fait que le homard expédié au marché dans le test s'est vendu plus cher.

Autres mollusques et crustacés.—On a pris les clanques, les praires, les huîtres et les pétoncles en très grandes quantités mais peu de vigneaux, de moules et de crabes. On a pris en 1935 51,070 barils de clanques ayant une valeur marchande de $111,740 et 1,785 barils de praires d'une valeur de $7,041, comparativement à un total de 33,676 barils des deux espèces d'une valeur marchande de $78,483, l'année précédente. Dans les statistiques de 1935 on donne séparément pour la première fois les chiffres relatifs aux clanques et aux praires. On a récolté 23,760 barils d'huîtres ayant une valeur marchande de $136,517, soit une double augmentation. En Nouvelle-Ecosse et dans le Nouveau-Brunswick les récoltes ont été plus considérables mais la récolte n'a pas été aussi bonne dans l'Ile du Prince-Edouard. La prise de pétoncles en Nouvelle-Ecosse a été presque deux fois aussi considérable que celle de l'année précédente, la production s'étant élevée à 126,371 gallons en 1935. Celle du Nouveau-Brunswick a été de 6,734 gallons, c'est-à-dire qu'elle ne s'est même pas élevée à la moitié de celle de l'année précédente. La production a augmenté dans le Québec. La prise totale a été de 133,225 gallons d'une valeur marchande de $207,641. Les pêcheurs de l'Ile du Prince-Edouard n'ont pas pris de pétoncles en 1935.

PÊCHERIES INTÉRIEURES

La prise de corégone a été légèrement plus élevée que celle de 1934. Ce sont les pêcheurs de l'Ontario qui ont pris le plus de cette espèce de poisson; le Manitoba et la Saskatchewan viennent ensuite. Les prises ont augmenté en Ontario et en Saskatchewan mais celle du Manitoba a été moins élevée. La prise de sandre en Ontario a accusé une augmentation considérable; elle a été de 5,123,000, soit plus que le double de celle de l'année précédente. Le doré est l'espèce la plus importante après le corégone. La prise du doré a subi une diminution de presque 1,300,000 livres. Le Manitoba est la province qui produit le plus de doré; sur un total de 10,954,800 livres en 1935, sa prise a été de 7,218,300 livres.

C'est en Ontario qu'on prend surtout la truite, pour autant qu'il s'agisse de pêche commerciale. Au cours de l'année dernière, on a pris en Ontario 6,256,300 livres de truite sur une prise totale de 6,624,200 livres.

On pêche l'anguille surtout dans les eaux intérieures du Québec et les pêcheurs de cette province en ont pris 2,226,400 livres en 1935. L'anguille se vendait bien naguère en Allemagne mais ce marché a été beaucoup plus difficilement abordable depuis deux ans, de telle sorte que les expéditeurs ont dû compter davantage sur les marchés de l'est des Etats-Unis et principalement sur New-York.

PÊCHERIES DU LITTORAL DU PACIFIQUE

Bien que la prise de toutes les espèces de poisson ait été plus considérable en Colombie Britannique, la valeur marchande a accusé la légère diminution de $64,806. Les prises de toutes espèces de poisson se sont élevées à 404,178,800 livres comparativement à 366,615,400 livres, l'année précédente. La valeur marchande a diminué de $15,234,335 à $15,169,529. La prise de chacune des quatre principales espèces de poisson du littoral, le saumon, le flétan, le hareng et le pilchard, ont accusé une augmentation.

Saumon.—On a pris 178,943,100 livres de saumon, soit une augmentation de 12,953,100 livres; la valeur marchande a cependant diminué de $302,767 et elle a été de $12,099,075. La mise en boîte a donné 1,529,022 caisses d'une valeur marchande de $9,653,897, soit une légère diminution au double point de vue de la quantité et de la valeur. On a mis en boîte surtout du saumon bécard,

du saumon rose et du sockeye qui se présentent dans cet ordre au point de vue de la production. Il y a eu une diminution de plus de 100,000 caisses de saumon bécard et de 25,000 caisses de sockeye mais on a compté 80,000 caisses de saumon rose de plus que l'année précédente. Le saumon mis en boîte a compté pour 84 p. 100 de la valeur marchande de toute la production; on a aussi vendu d'assez fortes quantités de saumon frais (28,834,700 livres), de saumon salé à sec (14,664,100 livres) et de poisson salé doux (2,036,800 livres). La production d'œufs de saumon a été de 1,023,000 livres, soit une augmentation de 400,000 livres sur celle de l'année précédente.

Flétan.—Les pêcheurs canadiens ont pris 10,192,700 livres de flétan, soit 424,600 livres de plus qu'en 1934; de plus, des vaisseaux américains ont débarqué dans nos ports et particulièrement à Prince-Rupert quelque 6,900,000 livres de flétan destinées aux Etats-Unis. Les vaisseaux canadiens ont vendu pour $80,513 de foies de flétan comparativement à $36,439 en 1934.

Hareng.—On a salé à sec la plus grande partie de la prise de ce poisson pour l'expédier en Orient. A cause de l'agitation qui a régné l'année dernière dans cette partie du monde, la demande de ce poisson n'a pas été très considérable, de telle sorte que la production de hareng salé à sec est tombée à 30,271,000 livres, soit une diminution de plus de 11,000,000 de livres sur celle de l'année précédente. En plus du hareng salé à sec, la Colombie Britannique produit aussi du hareng frais, en conserve, mi-saur, saumuré, comme boëtte, de l'huile de hareng et de la farine de hareng. La prise totale, qui a été de 100,850,700 livres accuse une augmentation de 18,800,000 livres mais la valeur marchande a été de $48,951 inférieure à celle de 1934.

Pilchard.—La prise de pilchard, qu'on utilise surtout pour la production de farine et d'huile, accuse une augmentation de 5,130,800 livres. Les prises se sont élevées à 91,141,100 livres et la valeur marchande a atteint la somme de $670,328, c'est-à-dire qu'elle s'est accrue de $120,418. On a produit plus de farine et d'huile qu'en 1934; on a produit 8,681 tonnes de farine et extrait 1,649,392 gallons d'huile, soit une augmentation de plus de 14,000 gallons. On vend aussi le pilchard en conserve et en petites quantités à l'état frais et comme boëtte.

Autres pêcheries.—La prise de morue grise, qui a été de 1,669,100 livres, s'est accrue de 388,000 livres et la prise de morue lingue, qui a atteint 6,284,100 livres, accuse une augmentation de 1,503,500 livres. On a pris plus de crabe et d'huîtres que l'année précédente; la prise de crabe a été de 670,800 livres et on a récolté 3,353 barils d'huîtres. On a pris 202 baleines qui ont produit de l'huile, de la farine et de l'engrais pour une valeur de $105,360. L'année précédente, 350 baleines avaient donné pour $183,738 de produits. En vertu du traité de la pêche pélagique, les Indiens seulement peuvent faire la chasse au phoque à fourrure sur le littoral de la Colombie Britannique et ils ont pris 841 phoques en 1935 comparativement à 256 l'année précédente.

L'aperçu donné ci-dessus sur les pêcheries canadiennes pour l'année 1935 est dû à la bienveillante collaboration du sous-ministre des Pêcheries, qui l'a fait préparer par son personnel.

23705—16½

RÉSUMÉ DE LA PRODUCTION, 1935

Le tableau ci-dessous indique, pour l'ensemble du Canada, tout le poisson pris et mis sur le marché au cours de l'année 1935, les chiffres de 1934 paraissant en regard. Pour chaque espèce, la quantité prise et sa valeur au débarquement sont d'abord données. Viennent ensuite des détails sur la forme sous laquelle chaque espèce a été mise sur le marché, ainsi que la valeur.

2. Quantité et valeur de tout le poisson pêché et mis en vente au Canada, durant les années 1934 et 1935

Agences de production

OPÉRATIONS PRIMAIRES

Capital.—Le capital placé dans les navires, bateaux, filets, nasses, môles et quais et en général dans le matériel de pêche utilisé dans les opérations primaires comme la prise et le débarquement du poisson, en 1935, s'élève à $26,473,082 dont $22,000,054 pour les pêcheries maritimes et $4,473,028 pour les pêcheries d'eau douce. Le total du capital placé est donc de $260,379 plus élevé que celui de l'année précédente et les pêcheries maritimes et les pêcheries d'eau douce se partagent cette augmentation.

Personnel.—Le nombre de pêcheurs employés au cours de l'année a été de 68,557, dont 56,833 aux pêcheries maritimes et 11,724 aux pêcheries d'eau douce. Le nombre des hommes employés aux pêcheries maritimes accuse une diminution de 706 sur celui de 1934 mais le nombre des hommes employés aux pêcheries d'eau douce a augmenté de 629; le nombre total des pêcheurs a donc diminué de 77.

Conserveries et saurisseries

Capital.—Le capital placé dans la division de la conserverie et de la saurisserie de l'industrie des pêcheries s'est élevé à la somme de $17,144,806 répartie comme suit: terrains, bâtiments et machineries, $9,252,727; matières premières et produits en mains, la marchandise en voie de fabrication, etc., $5,812,173; et argent en caisse, comptes courants et billets à percevoir, $2,079,906. Si on le compare à celui de l'an dernier, le total du capital placé accuse une diminution de $227,993.

Personnel.—Le nombre total de personnes employées par les établissements en 1935 a été de $14,361, c'est-à-dire de 441 inférieur à celui de 1934.

Les tableaux 3 à 6 qui suivent montrent en résumé le capital-outillage et les employés pour l'ensemble du Canada; d'autres tableaux de l'introduction présentent les statistiques par province, tandis que les statistiques par comté et sous-district de pêche paraissent dans les tableaux d'ensemble du présent rapport.

3. Outillage-capital—Opérations primaires. Valeur des vaisseaux, barques, filets, pièges, môles et quais, etc., employés dans les pêcheries canadiennes en 1933, 1934 et 1935

Conserveries et saurisseries

Nombre d'établissements.—On a exploité, en 1935, 630 conserveries et saurisseries qui se divisent comme suit: 304 homarderies; 75 saumoneries; 14 conserveries de crustacés et mollusques; 14 sardineries et conserveries d'autres poissons; 194 saurisseries; 13 glacières et 16 huileries. La classification de chacune des conserveries est déterminée par la principale espèce de poisson qu'elle met en conserve et les établissements désignés comme saurisseries sont ceux qui produisent du poisson séché, fumé, etc, mais pas de poisson en conserve. Les glacières produisent seulement du poisson frais et gelé et les huileries sont les établissements où l'on extrait de l'huile et de la farine de poisson. Les conserveries et les saurisseries appartiennent complètement aux pêcheries maritimes et les établissements sont échelonnés le long des côtes à des endroits facilement accessibles aux pêcheurs qui y apportent leurs prises. En 1935, les établissements se répartissaient comme suit par province: Ile du Prince-Edouard, 95; Nouvelle-Ecosse, 176; Nouveau-Brunswick, 137; Québec, 131; et Colombie Britannique, 91.

Personnel, salaires et gages.—Les établissements ont employé, en 1935, 14,361 personnes, ce nombre total comprenant 550 employés salariés, 9,468 employés à gages et 4,343 ouvriers à l'entreprise ou à la pièce. Seules les saumoneries de la Colombie Britannique, où une grande partie du travail se fait à l'entreprise, l'entrepreneur embauchant et payant ses propres employés et étant lui-même rémunéré par l'exploitant de la conserverie selon la quantité de poisson mis en conserve, ont des employés de la dernière catégorie. Environ 75 p.c. des ouvriers des conserveries de la Colombie Britannique sont classifiés de la sorte. Les statistiques du nombre total d'employés des établissements sont basées sur l'emploiement mensuel moyen de travailleurs à gages et sur le nombre total de salariés, d'ouvriers à l'entreprise et de travailleurs à la pièce pour l'entière saison, la méthode de calcul étant comme suit: sur le rapport de chaque établissement est faite l'addition du nombre de travailleurs à gages indiqués pour chaque mois, et le total ainsi obtenu est divisé par le nombre de mois pendant lesquels l'établissement a été en exploitation durant l'année. Par exemple, une homarderie emploie 12 personnes en mai, 14 en juin, 12 en juillet et 10 en août, en tout 48. On divise ce total par le nombre de mois d'exploitation, c'est-à-dire 4, ce qui donne 12 comme nombre d'ouvriers à gages de l'établissement. A ce nombre on ajoute celui des salariés et celui des ouvriers à l'entreprise et à la pièce, dont l'emploiement est sur une base annuelle ou saisonnière et non mensuelle. Le chiffre définitivement obtenu sera le nombre d'employés attribué à l'établissement en question pour l'année, et le calcul de ces totaux fournit le nombre d'employés dans toute l'industrie. La période d'emploiement varie selon la longueur de la saison des opérations: les homarderies sont exploitées pendant une période allant d'un mois à trois mois, et

les saumoneries pendant des périodes plus longues, alors que plusieurs des saurisseries restent en exploitation toute l'année. En outre, dans quelques-unes des conserveries, le saurissage s'effectue avant et après l'époque consacrée à la mise en conserve. Les fluctuations de l'emploiement sont indiquées par les statistiques du nombre de travilleurs à gages employés chaque mois. Il est impossible d'établir des statistiques mensuelles pour les ouvriers à la pièce; en effet, à cause du système d'embauchage de ces ouvriers par l'intermédiaire d'un entrepreneur, l'exploitant d'une conserverie ne tient pas compte du nombre qui y sont employés chaque mois et il lui est donc impossible d'inclure dans son rapport d'autres détails que le nombre moyen d'ouvriers pour la saison ainsi que la somme qui leur a été payée.

La somme totale payée durant l'année aux employés de toutes catégories s'est élevée à $3,553,948. Les salariés ont reçu 20 p. 100 de cette somme et les ouvriers, employés à gages, à l'entreprise et à la pièce, 80 p. 100.

Le tableau ci-dessous donne le nombre d'employés que comprend chacune des catégories et les salaires et les gages payés à ces derniers.

7. Personnel des conserveries et saurisseries en 1933, 1934 et 1935—nombre d'employés, salaires et gages

Année	Salariés		Employés à gages		Ouvriers à l'entreprise et à la pièce		Nombre total d'employés, salaires et gages	
	nomb.	$	nomb.	$	nomb.	$	nomb.	$
1933	473	558,500	9,453	1,728,885	4,116	736,683	14,042	3,024,068
1934	548	676,124	9,642	2,193,995	4,612	684,956	14,802	3,555,075
1935	550	703,075	9,468	2,171,478	4,343	679,395	14,361	3,553,948

Employés à gages par mois.—Les rapports de l'emploi par mois dans les conserveries et dans les saurisseries ne traitent que des employés à gages; les statistiques de l'emploi dans les autres catégories sont annuelles ou saisonnières. Mai et juin sont les mois où se manifeste la plus grande activité dans l'industrie en général; le nombre des employés à gages dans chacun de ces deux mois a de beaucoup excédé les 8,000. Dans les homarderies, c'est aussi en mai et juin que le personnel est le plus nombreux mais il y a quatre mois de grande activité dans les saumoneries, de mai à août. Le personnel des autres établissements reste à peu près le même toute l'année. Si l'on fait le total des employés inscrits chaque mois et que l'on divise ensuite ce total par 12, on verra que la moyenne des employés à gages pour les douze mois de 1935 a été de 4,065, comparativement à 3,982 qui avait été la moyenne de 1934.

Le tableau ci-dessous donne les statistiques de l'emploi par mois dans l'industrie.

8. Travailleurs à gages dans les conserveries et les saurisseries inscrits sur la liste de paie le 15 de chaque mois, 1933, 1934 et 1935 (a)

(a) A l'exclusion des travailleurs à l'entreprise et à la pièce.

Sommes hebdomadaires versées aux divers groupes d'employés à gages.—Le recensement annuel de l'industrie a compris en 1935 une enquête sur les payements hebdomadaires de gages aux ouvriers des manufactures et le tableau suivant donne les renseignements obtenus relatifs aux conserveries et aux, saurisseries. Les exploitants des établissements ont recu ordre d'inscrire en regard des différents groupes de gages indiqués le nombre d'ouvriers auxquels chacun d'eux s'applique qui ont été employés pendant toute semaine du mois pendant lequel l'emploi a été le plus considérable. Il s'agit dans cette classification des sommes qui ont été payées et non du taux des salaires. Il appert de la compilation des rapports que le groupe de ceux qui recoivent de $10 à $10.99 chacun par semaine est le plus nombreux chez les ouvriers et que les ouvrières qui reçoivent moins que $6.00 par semaine constituent le plus nombreux chez les femmes. Environ 80 p. 100 des ouvrières du groupe des gages les plus bas travaillent dans les homarderies et sur leur nombre la proportion de celles qui travaillent quelques heures par jour et dont les heures de travail par semaine, si on en faisait la somme, donneraient un chiffre de beaucoup inférieur à celui de la semaine de travail moyenne est probablement la plus considérable.

9. Sommes hebdomadaires versées aux divers groupes d'employés à gages: Sommes payées aux ouvriers des conserveries et des saurisseries pour le travail d'une semaine du mois pendant lequel l'emploi a été le plus élevé, 1935

Matières premières.—Les établissements ont recu au cours de 1935 pour servir à la préparation des différents produits et pour être vendu de nouveau à l'état frais 6,237,719 qtx de poisson, soit 71 p. 100 de tout le poisson de mer pris pendant l'année. Le reste de la prise a été vendu directement par les pêcheurs pour être consommé soit à l'état frais soit en conserves domestiques. Les établissements ont utilisé 625,158 qtx de plus que l'année précédente, ce qui représente une augmentation de 11 p. 100. Les autres item compris sous la rubrique "matières premières" comprennent le sel ($212,554), les récipients ($3,152,924) et diverses autres matières premières ($448,349). Le tableau ci-dessous donne la quantité et la valeur des principales matières premières utilisées de 1933 à 1935.

10. Quantité et valeur des matières premières utilisées dans les conserveries et les saurisseries, 1933, 1934 et 1935

Matières premières	1933		1934		1935	
	Quantité	Valeur	Quantité	Valeur	Quantité	Valeur
		$		$		$
Poisson qtx	4,866,142	8,178,543	5,612,561	11,638,820	6,237,719	10,958,895

Récipients	–	2,321,918	–	3,345,792	–	3,152,924
Autres matières premières	–	243,210	–	346,363	–	448,349
Total	–	**10,960,289**	–	**15,567,160**	–	**14,772,722**

Production.—La valeur totale de la production des établissements en 1935 s'est élevée à $23,458,356. La valeur du poisson mis en conserve, sauré ou autrement préparé a été de $18,253,891 et celle du poisson vendu pour être consommé à l'état frais, de $5,204,465. Les saumoneries ont donné 45 p. 100 de la valeur totale, soit $10,548,525; les saurisseries, 28 p. 100, soit $6,643,790; les homarderies, 13 p. 100, soit $3,031,281; les sardineries et conserveries d'autres poissons, 8 p. 100, soit $1,782,329; et les conserveries de clovisses, les établissements frigorifiques et les huileries ensemble, 6 p. 100, soit $1,452,431. La valeur de la production des établissements en 1935 représente 80 p. 100 de la valeur marchande totale des pêcheries maritimes de cette année; le 20 p. 100 que reste représente la valeur du poisson vendu directement par les pêcheurs pour être consommé soit à l'état frais soit en conserves domestiques.

On trouvera dans le tableau qui suit la valeur de la production de 1933 à 1935 disposée selon la classification des établissements.

Tableaux d'ensemble.—Une section des tableaux d'ensemble du présent rapport est consacrée aux statistiques des conserveries et des saurisseries; on y trouvera, par provinces et par comtés ou districts, des détails sur le capital, les employés, les salaires et gages, la valeur de la production et les autres aspects de l'industrie qui ont fait l'objet d'un résumé succinct dans les paragraphes précédents.

Les pêcheries dans les différentes provinces

Les tableaux ci-dessous (12-18) montrent, par provinces: la valeur totale des pêcheries; la quantité prise et débarquée et la valeur marchande des principaux poisson du commerce; la quantité et la valeur de tout le poisson pris, débarqué et mis sur le marché; les valeurs totales, par comtés ou districts, du poisson de mer pris, débarqué et mis sur le marché; la quantité de poisson de mer produite par les pêcheries côtières; le capital-outillage; le personnel.

12. Valeur des pêcheries, par provinces, de 1931 à 1935, par ordre de leur importance en 1935

(a) Antérieurement à 1934, les totaux concernant le flétan comprenaient les prises débarquées dans des ports de la Colombie Britannique par des vaisseaux des Etats-Unis, alors que depuis 1934 les débarquements américains sont exclus des statistiques, les chiffres se rapportant uniquement aux prises débarquées par des vaisseaux canadiens. Voir renvoi page 134 pour les prises débarquées par des navires américains en 1935.

Primes

En vertu d'une "Loi pour encourager le développement des pêcheries maritimes et la construction des navires de pêche," une somme de $160,000 est donnée en primes chaque année par le Gouverneur en conseil. Sous le nom de primes de pêche elles sont distribuées par le ministère des Pêcheries parmi les pêcheurs et les propriétaires de navires et de barques de pêche du littoral de l'Atlantique selon les règlements édictés de temps à autre par le Gouverneur en conseil.

En 1935, les versements ont été effectués sur la base suivante:

Aux propriétaires de navires de pêche ayant droit à cette prime—$1 par tonne enregistrée; avec un maximum de $80 par navire.

A chaque membre de l'équipage ayant droit à la prime—$6.30.

Aux propriétaires de barques mesurant au moins 12 pieds de quille, $1 par embarcation.

A chaque pêcheur d'une barque ayant droit à une prime, $5.45.

En tout le nombre de primes versées est de 12,498; l'année précédente il y en avait eu 12,623.

Le montant payé en 1935 est de $159,966.20, réparti comme suit:

A 600 propriétaires de navires et leurs équipages..... $ 33,462.40

A 11,898 barques et leurs équipages..... 126,503.80

Commerce extérieur

Exportations.—Les exportations canadiennes de poisson et de produits poissonniers en 1935 se sont élevées à la valeur totale de $24,859,486, soit une augmentation de $2,362,351 ou de 11 p. 100 sur celles de l'année précédente. Les principaux item d'exportation par ordre de valeur sont le saumon en boîte, $7,394,632; le homard en boîte, $2,274,783; le homard à l'état frais, $1,641,300; la morue séchée, $1,538,203; et le saumon à l'état frais et gelé, $1,228,162. Chacun de ces item, la morue séchée exceptée, accuse une augmentation sur 1934. Les principaux consommateurs de poisson et produits poissonniers canadiens sont les Etats-Unis qui en ont acheté pour $10,321,296; le Royaume-Uni, dont les importations se sont élevées à $6,759,505, et l'Australie, à qui nous avons vendu pour $2,060,351. La valeur de nos exportations à ces trois pays représente 77 p. 100 du total de la valeur de nos exportations au cours de l'année. Le Canada a aussi expédié du poisson et des produits poissonniers à 87 autres pays en 1935.

Importations.—La valeur des importations de poisson et de produits poissonniers destinés à la consommation s'est élevée à $2,597,856, comparativement à $2,121,762 en 1934. Nous importons principalement des sardines de la Norvège et des huîtres des Etats-Unis. Nous importons aussi beaucoup d'huile de poisson et principalement de l'huile de foie de morue, de l'huile de baleine et de cachalot.

Revue rétrospective

Les cinq tableaux suivants présentent une revue rétrospective de l'industrie de la pêche au Canada pendant les années passées. En ce qui concerne la production, les données sont établies par province et par année et remontent jusqu'à 1870. Quant au nombre et à la valeur des navires, barques, etc., les chiffres partent de l'année 1880; le personnel qu'emploie cette industrie nous est révélé depuis 1895.

NOTA.—De 1895 à 1906 l'exercice budgétaire se terminait le 30 juin; de 1908 à 1917(a) le 31 mars; depuis 1917(b) il s'agit des années civiles. Les chiffres manquent pour les neuf mois finissant le 31 mars 1907.

20. Tableau de conversion de la pesée du poisson

Dans ce tableau, dans le cas de la morue, de l'églefin, de la merluche, de l'alose, du gasparot et du flétan (littoral de l'Atlantique) on entend par poisson frais le poisson dont on a enlevé les entrailles et non la tête. Le poids du flétan sur la côte du Pacifique est pris après l'enlèvement de la tête et des entrailles. Dans le cas de l'espadon et du thon le poids comprend le poisson après l'enlèvement de la tête, de la queue et des entrailles. Pour tous les autres poissons le terme "poisson frais" signifie le poisson tel que sorti de l'eau.

MORUE, ÉGLEFIN, MERLUCHE ET LOTTE OU POLLOCK

300 lb de poisson frais donnent 1 qtl de filets frais.
160 lb de poisson frais donnent une caisse de poisson en boîte.
200 lb de poisson frais donnent 1 qtl de poisson salé vert.
200 lb de poisson frais donnent 1 qtl de poisson saumuré.
300 lb de poisson frais donnent 1 qtl de filets fumés.
200 lb de poisson frais donnent 1 qtl de poisson fumé.
300 lb de poisson frais donnent 1 qtl de poisson séché.
400 lb de poisson frais donnent 1 qtl de poisson désossé.

HARENG

70 lb de hareng frais donnent une caisse de hareng en boîte.
200 lb de poisson frais donnent 1 qtl de hareng fumé.
300 lb de poisson frais donnent un baril de hareng saumuré.
200 lb de poisson frais donnent un baril de boëtte (fraîche ou salée.)
200 lb de poisson frais donnent un baril d'engrais.
125 lb de poisson frais donnent 1 qtl de hareng salé à sec.

MAQUEREAU OU ALOSE

70 lb de poisson frais donnent une caisse de poisson en boîte.
300 lb de poisson frais donnent un baril de poisson saumuré.
400 lb de poisson frais donnent un baril de filets de maquereau salés.

SARDINE

Un baril de poisson frais donne $4\frac{1}{4}$ caisses de poisson en boîte.
Une caisse de 25 livres équivaut à 100 boîtes de $\frac{1}{4}$ lb chacune.

PILCHARD

70 lb de poisson frais donnent une caisse de poisson en boîte.
200 lb de poisson frais donnent un baril de boëtte.

GASPAROT

200 lb de poisson frais donnent 1 qtl de poisson fumé.
275 lb de poisson frais donnent un baril de poisson saumuré.

SAUMON

84 lb de poisson frais (Pacifique) donnent une caisse de 48 lb de poisson en boîte.
70 livres de poisson frais (Atlantique) donnent une caisse de 48 lb de poisson en boîte.
170 lb de poisson frais donnent 1 qtl de poisson fumé.
125 lb de poisson frais donnent 1 qtl de poisson salé à sec.
150 lb de poisson frais donnent 1 qtl de poisson fumé doux.
150 lb de poisson frais donnent 1 qtl de poisson saumuré.

THON

100 lb de poisson frais donnent une caisse de poisson en boîte.

CLOVISSES ET MACTRES

Un baril de mollusques frais donne une caisse de chair en boîte.
(48 boîtes de 6 onces de chair chacune).

HOMARDS

200 lb de homard frais donnent une caisse de homard en boîte.
(48 boîtes de 12 onces de chair chacune).
500 lb de homard frais donnent 1 qtl de chair.

PREFACE

This Report is issued under an arrangement for statistical co-operation between the Dominion Bureau of Statistics and the Government departments having jurisdiction with regard to fisheries throughout Canada. These departments comprise: The Dominion Fisheries Department which exercises jurisdiction over the fisheries of the Maritime provinces, Yukon, British Columbia and the Magdalen Islands, and the Fisheries Branches of departments of Ontario, Quebec, Manitoba, Saskatchewan and Alberta which have jurisdiction over the fisheries of their respective provinces, excepting in the case of Quebec, the fisheries of the Magdalen Islands. The province of British Columbia has a Fisheries Branch, but it does not engage in independent statistical work.

Under the arrangement above referred to, the statistics of the catch, and of the products marketed in a fresh state or domestically prepared, are collected by the local fisheries officers, checked in the Department of Fisheries, and co-ordinated and compiled in the Dominion Bureau of Statistics. In the case of manufactured fish products, schedules in conformity with those of other sections of the Census of Industry are sent by the Bureau to the operators of canneries, fish-curing establishments, etc., the fisheries officers assisting in securing an expeditious and accurate return. The grateful acknowledgments of the Bureau are tendered to the officers of the provincial governments who co-operate in these arrangements.

R. H. COATS,
Dominion Statistician.

Dominion Bureau of Statistics,
Ottawa, October 12, 1937.

45799—1

THE FISHERIES OF CANADA

The Early Fisheries.—*Fishing is one of the earliest and most historic industries of Canada. Leaving aside inconclusive evidence in favour of authentic record, one must ascribe to Cabot the honour of having discovered, in 1497, the cod banks of Newfoundland, when he first sighted the mainland of North America. He reported that the sea was so covered with fish that they could be caught "with baskets, a stone being attached to make the basket sink in the water". Cape Breton, one of the oldest place-names in America, is a memorial of the early French fishermen —and the Spaniards and the Portuguese were but little behind. Fernandez de Navarette mentions all three as frequenters of the "Grand Banks" before 1502. The fishing was by hand lines over barrels made fast to the bulwarks to prevent fouling, the vessels remaining during fine weather, then returning to France with from 30,000 to 50,000 cod. Voyages along the coast soon showed the cod as plentiful inshore as on the outer banks, and it became common for a crew to anchor in a bay, erect a hut on shore, and make daily excursions to the fishing grounds—the product being salted and dried on land and at the end of the season shipped to France. Jacques Cartier, when he went up the St. Lawrence in 1534, found traces everywhere of these early "Captains Courageous" and of their rivalries in arms no less than in the capture of the teeming product which had tempted them so far from home. An establishment of the kind mentioned was founded at Tadoussac by Chauvin in 1599. Soon the fishermen began to stay all winter and thus to erect permanent fishing settlements. The first grant of the fisheries of Canada was made by the King of France to de Monts in 1603. Fishing, therefore, may well be regarded as the first industry to be systematically prosecuted by Europeans in what is to-day the Dominion of Canada. It has never since ceased to yield a perennial harvest.*

By the Treaty of Utrecht in 1713, Britain became the owner of Newfoundland and excluded France from fishing and drying fish on certain sections of the coast, but France retained the fisheries of Cape Breton and the Gulf. The Seven Years' War (1756-1763) put a stop to continuous fishing. At its close the Robin family of Jersey came to Canada, and gradually acquired the former French fishing stations. Until the arrival of the Loyalists all other fishing but cod was neglected. Inshore fisheries alone (including those of the Labrador coast) were developed during this phase; no deep-sea fishing vessel put out from Lunenburg, now the chief centre of the deep-sea fishery, until 1873.

The Canadian Fishing Grounds.—*Canada's fishing grounds are perhaps the most extensive in the world. On the Atlantic, from Grand Manan to Labrador, the coast line, not including the lesser bays and indentations, measures over 5,000 miles. The bay of Fundy, 8,000 square miles in extent, the gulf of St. Lawrence, fully ten times that size, and other ocean waters comprise not less than 200,000 square miles or over four-fifths of the area of the fishing grounds of the North Atlantic. In addition there are on the Atlantic seaboard 15,000 square miles of inshore waters controlled entirely by the Dominion. Large as are these areas they represent only a part of the fishing grounds of Canada. The Pacific coast of the Dominion measures 7,180 miles in length and is exceptionally well sheltered, whilst throughout the interior is a series of lakes which together contain more than half of the fresh water on the planet, Canada's share of the Great Lakes alone amounting to over 34,000 square miles, a total which of course does not include lake Winnipeg (9,457 square miles), lake Manitoba, and others of even greater area.*

Still more important than the extent of the Canadian fishing grounds is the quality of their product. It is an axiom among authorities that food fishes improve in proportion to the purity and coldness of the waters in which they are taken.

His Excellency goes a-fishing. Here we see Lord Tweedsmuir embarking for an afternoon of salmon angling on the famous Hartt's Island Pool of the St. John River, six miles above Fredericton, New Brunswick, during the course of the recent vice-regal tour of the Maritimes.

Judged by this standard, the Canadian salmon, cod, halibut, herring, mackerel, and whitefish are the peers of any in the world. It is possible, therefore, to state that by far the most valuable fisheries of the western hemisphere, if not of the globe, belong to Canada.

It will be seen from the foregoing that it is impossible to deal with the Canadian fisheries in the aggregate; they are those of a continent rather than of a country, and are of corresponding diversity. Omitting the Hudson Bay and peri-Arctic region, which extends from Ungava to Alaska, there are roughly the following divisions of the Canadian fisheries:

1. Atlantic Fisheries.—*These were the first Canadian fisheries in point of time and until 1918 they remained the most important for aggregate value of product. Cod, halibut, haddock, herring, mackerel, smelt, sardine, swordfish, lobster and oyster fisheries are included. The estuarian and inland waters of the Maritime provinces and of Quebec are sometimes considered as distinct; if they are added, the list of products would embrace the salmon, the shad, the alewife, the smelt, the striped bass, the tom cod, and the maskinonge. Conditions are fairly uniform throughout these fisheries, which are commonly divided into the inshore and deep-sea fisheries. The inshore or coastal fishery is carried on in small boats usually motor driven, with crews of two or three men, and in a class of small vessels with crews of from four to seven men. The means of capture employed by boat fishermen are gill nets and hooks and lines, both hand lines and trawls; whilst from the shore are operated trap nets, haul seines and weirs. Haddock as well as cod is a staple product; during the spring and summer it is split and salted but the important season comes with the autumn, when the fish are shipped fresh or smoked. The deep-sea fisheries are worked by vessels of from 40 to 100 tons, carrying from twelve to twenty men operating mainly with trawl lines from dories, although some fishing is done directly from the vessels by means of hand lines. The fleets operate on the various fishing banks, such as Grand Bank, Middle Ground and Banquereau. The vessels, built in the home shipyards, remain at sea, sometimes for months at a time, and in the hands of sailors who have no superior, seldom come to grief. When they return, the fish, which have been split and salted on board, are taken on shore and washed and dried. The West Indies provide the chief market for this product; no cod fish in the world stands the tropical climate like that cured by the fishermen of the Maritime provinces. Steam trawling as it is carried on in the North Sea was introduced on the Atlantic coast of Canada a number of years ago. The trawlers operate practically the whole year and their catches are utilized entirely for the fresh fish trade. Under the Fisheries Act, trawlers must be registered as British ships in Canada, owned in Canada and licensed by the Minister of Fisheries, and their operations must be restricted to waters at least 12 miles from shore.*

Lobstering operations, which commenced about 1870, provide another distinctive industry. In that year there were three lobster canneries on the Atlantic coast of Canada; in 1936 the canneries numbered 304 and gave work to nearly 6,000 people; 30,000,000 lobsters is a normal catch. The difficulty of enforcing regulations prohibiting the capture of undersized and spawning lobsters offers a constant problem in connection with the output, but with the co-operation of the fishermen themselves the fishery may be maintained and the annual harvest show no decline. In New Brunswick the canning of sardines, which are young herrings and not a distinct type of fish, has, during the past three years, exceeded in importance the lobster industry. The oyster fishery, whose early abundance was for a number of years greatly diminished, is now increasing in annual yield, owing to the development by the Government of oyster farming; favourable areas in Prince Edward Island and Nova Scotia waters have been seeded, and the work in connection with the oyster culture is being carried on under the direction of experts.

The fishing population of the Maritime provinces is a specialized and stable industrial class. The coast-wise fisheries are operated from April to November, or to January in sheltered districts; and although the larger vessels work all winter, several thousand men are available for a time each year for other employment. This they find about the small plots of land which the most of them own or occupy, in the lumber camps of New Brunswick, or in the collieries of Nova Scotia. A few from Lunenburg and other centres engage in the West Indian trade. Apart from restrictions of weather and close seasons, the prevailing method of paying the men on shares has a further tendency in years of low catches or prices to drive them into secondary occupations.

2. Inland Fisheries.—*The Great Lakes and tributary waters of the St. Lawrence are a second great division of the Canadian fisheries. The value of the inland fisheries of Quebec lies chiefly in the output of the eel, dore (pickerel), and sturgeon fisheries. In Ontario, whitefish, trout, pickerel and lake herring are the most important commercial fishes, though pike, sturgeon and coarse fish yield a fair return. The season on the Great Lakes lasts from six to eight months, and though fishing through the ice is followed by many a large number depend on miscellaneous employment between the seasons. Moving westward, lake Winnipeg, lake Winnipegosis, lake Manitoba and the smaller lakes to the north and east furnish most of the fish products of Manitoba. Whitefish and pickerel are the chief products, but pike, tullibee, goldeye and many other varieties are found. In Saskatchewan and Alberta commercial fishing is confined to the regions north of the Saskatchewan river, where whitefish in large quantities are taken. The difficulties in connection with transportation have not yet been surmounted; some of the greatest lakes of the continent—Reindeer, Great Slave, Great Bear—and hundreds of smaller bodies of water are still beyond reach from a marketing point of view. The lakes of the west, however, repeating the part which the St. Lawrence played in the days of the French regime, and the cod banks in the history of New England, have assisted greatly in the settlement of the country by providing a much needed food supply for early arrivals.*

3. Pacific Fisheries.—*In British Columbia there is an interior fishing region which corresponds in the main to the prairie section; in the early history of the province it is doubtful if the fur trade (which opened the door by way of the Rocky Mountains to later enterprise) could have established its footing but for these fisheries. The great wealth of British Columbia, however, in this respect—the source from which she contributes approximately two-fifths of the marketed value of the fish products of Canada and has built up a trade which reaches to the ends of the earth—is in the estuarian salmon fisheries of the Fraser, the Skeena, the Naas, and other rivers of the Pacific slope. Every species of this king of food fishes known to the waters of the Pacific (which, however, is not the salmo salar or true salmon) is to be found on the British Columbia coast—the sockeye, the spring, the cohoe, the pink and the chum salmon. Of these, the sockeye, though not taken in such great numbers as the pink and chum species, is by far the most important, owing to its prevailing deep red colour and excellent texture, which have created so keen a demand for it in British and foreign markets. On the Fraser river, which used to be the chief source of supply, but which has now yielded place to the Skeena and other northern waters, the yield varies to a considerable extent from year to year. The run begins late in July and is at its height in the opening weeks of August, though the northern rivers have a somewhat earlier season. The spring or quinnat salmon is a much larger fish; it was the first species used in the United States for canning. The run begins early in the spring and continues until the end of July. The cohoes are smaller, running like the sockeye, in schools, during September and October on the Fraser, and earlier on the northern streams. The chum salmon is canned and a considerable quantity also is salted for export to the Orient. The run of pink salmon comes about three or four weeks later than that of the sockeye. Many of the employees in the salmon fishery are Chinese, Japanese and Indians, the Chinese finding work in the canneries and the Indians and Japanese in the fishing operations.*

Halibut abounds off Vancouver island and between the Queen Charlotte Islands and the mainland, and though the first endeavour to establish an industry was unsuccessful, by 1903 British Columbia supplied 10,000,000 pounds of 25,000,000 pounds taken on the whole Pacific coast north of California. The former figure has since, in many years, been trebled, although after 1930 the quantity was reduced owing to the restrictions imposed under the provisions of the Treaty signed by Canada and the United States for the conservation of this fishery. The annual catch of herring in British Columbia represents about 56 per cent of the total catch of sea herring for the Dominion, and nearly the whole of it is dry-salted for export to China and Japan. The pilchard fishery has become of importance in recent years, the greater part of the catch being used in the manufacture of oil and meal, of which large quantities are produced annually There is also the whale fishery, which has two stations on the Queen Charlotte Islands. The catch includes whales of many kinds—sulphur bottom, finback, humpback and sperm, the last mentioned predominating. Whale hunting is carried on in boats with Svend Foyn harpoon guns—a method which was introduced from Norway. Every scrap of the whale is used—oil, meal and fertilizer are its more important products. Black and ling cod, oulachon, flounders, skate, soles, clams and oysters are also abundant in British Columbia waters.

A word might be added with regard to the Canadian fur-seal fisheries of the Pacific, whose historic headquarters were the city of Victoria. Early in the present century the industry had, owing to the scarcity of the animals, been reduced to small proportions, and in 1911 a treaty was arranged between Great Britain, the United States, Japan and Russia, the terms of which prohibit pelagic or open-sea fishing. This treaty, still in effect, has for its object the conservation of the seals and it has resulted in greatly increasing the size of the herds. As compensation for the suspension of her sealing rights Canada receives annually from the Government of the United States, Japan and Russia a share of the proceeds of the sealing on the Pribaloff Islands and other rookeries owned by the respective countries. The Indians of British Columbia are exempt from the provisions of the Treaty, but their hunting must be carried on from open boats, manned by not more than five persons each and without the use of firearms.

Game Fish.—*The above is a purely industrial and commercial survey. Fishing for sport, however, has its economic side in a country of such famous game fish as the salmon of the Restigouche and other rivers of the Maritime provinces, the black bass and speckled trout of the Quebec and Ontario highlands, the red trout of the Nipigon and the salmon and rainbow trout of British Columbia. A considerable public revenue is derived from the leasing of waters in sparsely settled districts to clubs and individuals for sporting purposes. Several hundreds of guides find employment here during the summer months.*

The Government and the Fisheries.*

Upon the organization of the Dominion Government at Confederation, the administration of the Canadian fisheries was placed under the Department of Marine and Fisheries. Early in 1930 a department of Fisheries, in charge of its own Minister, was organized. This Department now administers all the tidal fisheries (except those of the mainland portion of Quebec, which by agreement are under provincial administration), the non-tidal fisheries of Nova Scotia, and the fisheries of Yukon and the Northwest Territories. The non-tidal fisheries of New Brunswick, Prince Edward Island, Ontario, the Prairie Provinces, and British Columbia, and both the tidal and non-tidal fisheries of Quebec (except the fisheries of the Magdalen islands) are administered by the respective provinces, although the Dominion Department does certain protective work in non-tidal waters of New Brunswick, Prince Edward Island and British Columbia. The right of fisheries regulation for all the provinces, however, rests with the Dominion Government. [See the Fisheries Act (22-23 Geo. V, c. 42).] The expenditure of the Dominion on the fisheries in the fiscal year 1936-37, including civil government salaries, contingencies, etc., was $2,036,892, and the revenue $176,730.

* Revised under the direction of W. A. Found, Deputy Minister of Fisheries, Ottawa.

Conservation.—*River and lake fisheries certainly, and sea fisheries probably, if left to themselves, conform to the economic law of diminishing returns. The Canadian Government, accordingly, has had for a main object the prevention of depletion by the enforcement of closed seasons, the forbidding of obstructions and pollutions and the regulation of nets, gear and fishing operations generally. In addition, an extensive system of fish culture has been organized; the Dominion, in 1936, operated 23 main hatcheries, 8 subsidiary hatcheries, 2 rearing stations, 8 salmon retaining ponds and several egg collecting stations at a cost of $214,529 and distributed 111,672,401 trout and salmon eggs, fry and older fish. The young fish are distributed* gratis *if the waters in which they are to be placed are suitable and are open to public fishing. Investigations and experiments directed toward the culture of the oyster have been carried on since 1929 at Malpeque bay, Prince Edward Island, by the Dominion Department of Fisheries, and are now being extended to areas in Nova Scotia.*

Direct Assistance.—*On the Atlantic coast where conditions attending fishing operations make such a service desirable, a system has been established of broadcasting radio reports as to weather probabilities, bait and ice supplies, and ice conditions. Further, under authority of the Fish Inspection Act (R.S.C., 1927, c. 72) systems of instruction in improved methods of fish curing and barrel making have been in operation for several years.*

By parliamentary vote the sum of $300,000 was made available for use by the Department of Fisheries during the fiscal year 1936-37 to aid, in co-operation with the provinces concerned, in the re-establishment of needy fishermen. Four provinces where administration of the fisheries is in federal hands in whole or in part—Nova Scotia, New Brunswick, Prince Edward Island and Quebec—entered into agreements with the federal authorities in carrying out the purpose of this vote. In each of the four the Department of Fisheries spent dollar for dollar with the provincial government in direct aid to fishermen who were in need of assistance and the total spendings from the departmental appropriation were $200,008. In Quebec 8,930 grants were made to fishermen. In the Maritime Provinces the plan adopted was to make loans to fishermen and associations of fishermen and in the three provinces 6,649 fishermen and 22 associations were aided in this way.

In further effort to aid the fishermen, in this case by expanding the demand for their products, a large-scale advertising campaign was inaugurated by the Department of Fisheries during the fiscal year and the costs were met from a special appropriation of $200,000 which had been voted by Parliament. In the main, the advertising was carried on within the Dominion but $25,000 was expended in the United Kingdom with the particular object of increasing sales of Canadian canned lobster and canned salmon. In Canada many publications of different classes were used in the campaign, which extended to all parts of the country and directed attention to the merits of Canadian fish foods generally.

Scientific Research.—*Stations under the direction of the Biological Board of Canada for the conduct of research into the numerous complex problems occurring in connection with the fisheries are established at Halifax, N.S., St. Andrews, N.B., Nanaimo and Prince Rupert, B.C., and in Gaspe county, Que. The biological stations at St. Andrews and Nanaimo are concerned chiefly with problems of fish life, while at the fisheries experimental stations at Halifax, Prince Rupert and Gaspe county, attention is devoted to the practical problems of the fishing industry. A biological station, chiefly for oyster investigation work, is conducted by the Board at Ellerslie, P.E.I., and a sub-station for salmon investigations at Cultus Lake, B.C. The Biological Board employs a permanent staff of scientists. The life-histories of edible fishes, the bacteriology of fresh and cured fish, improved methods of handling and preparing fish, and numerous other practical problems have been taken up and scientific memoirs and reports issued.*

International Problems.—*The chief international fisheries problem has been the question of the privileges of the United States in the Atlantic fisheries. Details of the history of this question for the past century and a half may be found at pages 9 and 10 of the Fisheries Statistics Report, 1935. Since 1933, under the former* modus vivendi *licence plan, which grew out of a treaty of 1888, which, however, was never ratified, United States vessels have again been permitted to enter Canadian ports to buy bait and all other supplies.*

On the Great Lakes, also, the more important fishery problems, such as restocking and marketing, are necessarily international in character, and are complicated by the number of State governments interested. Much the same situation has developed in connection with the sockeye salmon fishery of the Pacific coast where the sockeye of the Fraser river, British Columbia, are taken by the canners of Puget sound in quantities that largely exceed the catch of the Canadian canners. Different treaties to settle the matter were signed but none of them has so far been made effective.

*Better results have been obtained in dealing with the international problem touching the halibut fishery of the Pacific which was settled by the treaty "For the Protection of the Pacific Halibut", signed by Canada and the United States on March 2, 1923. Under this treaty a closed season in each year was provided for halibut fishing. A further convention, signed by the plenipotentiaries of the two countries at Ottawa on May 9, 1930, and ratified by the respective governments of the countries on May 9, 1931, provided for the regulation of the fishery by the division of the waters into fishing areas, changing of dates for closed seasons, etc. This revised convention provides a simpler and more responsive system of control than was previously possible.**

Fishing Bounties.—*By an Act of 1882 (45 Vict., c. 18) for the development of the sea fisheries and the encouragement of boat-building, provision was made for the distribution, annually, among fishermen and the owners of fishing boats and vessels on the Atlantic waters, of $150,000 in bounties, representing the interest on the amount of the Halifax Award. An Act of 1891 (54-55 Vict., c. 42) increased the amount to $160,000, the details of the expenditure to be settled each year by Order in Council.*

THE MODERN INDUSTRY

The latter half of the nineteenth century saw the commencement of expansion in the commercial fishing industry of Canada. In 1844 the estimated value of the catch was only $125,000. It doubled in the following decade and by 1860 had passed the million mark. Ten years later it was six millions and this was again more than doubled in 1878. By 1900 it had reached a total of 21 millions and the growth continued with little interruption until 1918, when it reached the high record of 60 millions. Since then there have been decreases in value, but these are due to lower prices rather than to smaller catches. In 1936 the value was $39,165,055. It will be understood that the figures given represent the total value of the fish as marketed, whether in a fresh, dried, canned or otherwise prepared state. Meanwhile the number of employees has increased in like proportion, mounting in some years to over 90,000, while the capital investment has gone as high as $64,000,000. In 1936 the number of employees was 86,973, and the capital investment, $45,831,842.

Among the different kinds of fish, the cod of the Atlantic and the salmon of the Pacific, in the earlier years of the fishing industry, disputed the primacy, but since 1895 salmon has definitely taken the lead, and the heavy pack and high price of lobsters have, in more recent years, sent cod down to third place. The value of output of the salmon fishery in the period 1869 to 1936 was approximately 462 million dollars, and that of the cod fishery, 290 million. This has affected the relative standing of the provinces accordingly, British Columbia now occupying the leadership that in earlier times belonged to Nova Scotia.

*A new convention, generally similar to that of 1930, but embodying several changes, was signed at Ottawa on January 29, 1937.

TRADE.—*The domestic consumption (a) of fish is relatively small in Canada, and the trade depends largely upon foreign markets. From 60 to 70 per cent of the annual capture is an average export, of which the United States takes approximately one-half and the United Kingdom one-fourth. In the calendar year 1936, total exports amounted to $25,398,102, of which $12,917,592 went to the United States and $5,781,730 to the United Kingdom. A further division shows that $9,388,184 went to British Empire countries and $16,009,918 to foreign countries. The most important single export is canned salmon (to the United Kingdom and European markets), followed by fresh lobster, canned lobster, fresh whitefish, fresh salmon, and dried cod (to the West Indies, South America, etc.). For fresh fish the United States is the chief market.*

(a) See paragraph headed "Direct Assistance", page 8, for note on the work undertaken by the Dominion Government to increase the consumption of fish in Canada.

FISHERIES STATISTICS OF CANADA, 1936

The total value of production of the fisheries of Canada for the year 1936 was $39,165,055, compared with $34,427,854 in 1935 and $34,022,323 in 1934. These totals represent the value of the product as marketed, whether sold for consumption fresh, domestically prepared or factory made. The following table shows the quantity caught and the value marketed of the chief commercial fishes (those valued at $100,000 or upwards) for the past five years, with a statement in the final column of the increase or decrease for 1936 compared with 1935.

1. Quantity (a) **and Value** (b) **of the Chief Commercial Fishes, Canada, 1932 to 1936**

(a) Quantity caught. (b) Value marketed. (c) Previous to 1934 the totals for halibut included landings at British Columbia ports by United States vessels, whereas from 1934 on the United States landings are excluded from the statistics and the figures cover landings by Canadian vessels only. See footnote at page 138 for landings in 1936 by United States vessels. (d) Prior to 1935 clams and quahaugs were combined.

REVIEW OF THE FISHERIES, 1936

The catch of fish and shellfish of all kinds for the whole Dominion of Canada during the year 1936 amounted to 1,108,827,900 pounds, with a marketed value of $39,165,055. In the preceding year the landings of all varieties came to 953,201,600 pounds with a marketed value of $34,427,854. The ocean contributed 1,027,485,700 pounds of the catch for this year and this quantity had a marketed value of $32,951,504. In the inland waters the total catch was 81,342,200 pounds and the marketed value $6,213,551. Increased catches and higher values were noted in all of the sea fishing districts, while the only two inland areas to show decreased returns were the Yukon territory and inland Quebec.

Major Fisheries.—The quantity of salmon taken during the year was 202,970,400 pounds, or an increase of 20,549,900 pounds, while the marketed value of $13,867,513 showed an increase of $1,327,206. From the standpoint of value salmon is the chief commercial fish in Canada with lobsters coming second and cod third. The year's catch of lobsters was 28,327,300 pounds, having a marketed value of $4,383,428, which meant a reduction of 3,669,600 pounds in quantity taken as compared with the 1935 production, but an increase of some $4,600 in value. There were 169,997,400 pounds of cod taken with a marketed value of $3,331,750. Both catch and value were greater than in 1935, the former by 16,082,400 pounds and the latter by $573,610. The whitefish catch, taken altogether in inland waters, amounted to 14,460,300 pounds and had a marketed value of $1,525,700—a slight decrease in catch but a rise in value.

ATLANTIC COAST SEA FISHERIES RESULTS

The following table shows the total catch of sea fish and shellfish by provinces during the past two years:—

	1936	1935
	lb.	lb.
Nova Scotia	265,092,200	235,357,700
New Brunswick	158,645,000	138,536,900
Prince Edward Island	24,813,800	20,891,800
Quebec	89,259,400	80,682,900
Total landings	537,810,400	475,469,300

Cod, Haddock, Hake and Cusk, and Pollock.—The total landings of these varieties during the year amounted to 244,925,300 pounds with a marketed value of $5,028,060. In the preceding year the quantity landed was 216,268,900 pounds and the marketed value $4,135,460. The cod catch was greater than the combined landings of the other varieties, the catch of 169,187,500 pounds showing an increase of 16,941,600 pounds. Each of the other varieties was also taken in much larger quantity than in 1935, the catches being as follows,—haddock, 40,301,000 pounds, hake and cusk, 22,802,300 pounds, and pollock, 12,634,500 pounds. Cod and haddock are taken in the largest quantities by Nova Scotia fishermen. Quebec, second among the cod producing provinces, had a catch last year of almost 42,000,000 pounds as compared with 108,000,000 pounds for Nova Scotia. The landings of haddock in Nova Scotia amounted to 39,184,800 pounds, an increase of 3,500,000 pounds. New Brunswick showed a catch of 6,080,300 pounds of hake and cusk, a slight increase, while the pollock catch for the same province was 5,113,500 pounds. The Nova Scotia pollock catch of 7,521,000 pounds represents an increase of fifty per cent. Pollock are not taken in the waters off Prince Edward Island or Quebec.

The year brought another reduction in the output of dried fish, notwithstanding the increase in the aggregate catch of cod, haddock, hake and cusk, and pollock, the species which are used in the dried fish trade. Out of the total catch slightly less than 70,500,000 pounds went into the production of dried fish (exclusive of boneless fish) as against approximately 86,869,000 pounds in 1935, and as it takes about 300 pounds of fresh fish to produce 100 pounds of dried the 1936 pack of the latter product was only 23,496,000 pounds, roundly stated, as compared with 28,956,000 pounds in the earlier year. There was a sharp increase in the poundage that went into the fresh fish trade. All told, the quantity of cod, haddock, hake and cusk, and pollock used fresh during the year, including the quantity marketed in the form of fresh fillets, was 78,322,000 pounds—round figures again—while in 1935 the figure was only slightly more than 54,838,000 pounds. The percentages of the catches used fresh and used for producing dried fish, respectively, in the two years were as follows: Used fresh—1936, 32 per cent; 1935, 25 per cent; used in producing dried fish, exclusive of boneless fish—1936, 29 per cent; 1935, 41 per cent. Most of the dried fish put up is dried cod and Nova Scotia is the largest producer. The pack of dried cod in Nova Scotia during the year decreased by more than a million pounds to 11,712,600 pounds. In Quebec, the next largest producer, only 5,820,900 pounds were packed, which meant a decline of more than 2,000,000 pounds from the preceding year's figures. The total production of dried pollock on the coast increased by more than a million pounds, reaching 3,115,800 pounds. While dried hake production decreased in the aggregate, there was a gain in Prince Edward Island, but the island output was not large, slightly under 189,000 pounds.

Herring, Mackerel and Sardines.—Increased landings of all three of these species were reported, with the herring catch 118,083,700 pounds, showing the largest gain, 16,350,000 pounds. The mackerel catch of 22,763,800 pounds increased by 6,710,000 pounds. Both herring and mackerel are taken in each of the Atlantic coast provinces, with New Brunswick having the largest landings of herring in 1936, or 52,162,000 pounds, and Nova Scotia the largest catch of mackerel, 19,061,600 pounds. Larger landings of herring were made in each province, while the mackerel catch was greater everywhere except in Quebec where the quantity taken, 1,616,400 pounds, was less than half that of 1935. Sardines are taken in New Brunswick and Quebec but it is on the Bay of Fundy shore of the former province that the large catches are taken in weirs. The quantity landed there in 1936 was 49,273,600 pounds, an increase of 11,773,800 pounds. The greater part of the catch is canned in the area where landed, or sold to canneries across the border in Maine. The year's pack of 393,854 cases in New Brunswick went in large part into export trade, Canadian sardines being in firm demand in numerous overseas British countries, as well as in other markets abroad. The marketed value of the sardine catch was $1,597,192 while the marketed value of the three varieties, sardines, mackerel and herring, combined, amounted to $3,250,915, an increase of $490,287.

Flounders, Halibut and Swordfish.—Increased landings were reported in the flounder and halibut fisheries, but the catch of swordfish diminished. Flounders are taken in the waters of each of the Atlantic provinces, halibut in all but Prince Edward Island areas, and swordfish off Nova Scotia only. The catch of flounders was 874,500 pounds, most of which, 661,600 pounds, was reported from Nova Scotia. Of the total catch of halibut, 3,255,000 pounds, Nova Scotia was credited with 3,104,400 pounds. The latter figure represents an increase of 200,000 pounds. The marketed value of halibut was $401,431 while that of the 1,785,300 pounds of swordfish taken was $230,798.

Salmon and Other River Spawning Fish.—The catch of salmon, 3,193,100 pounds, was slightly less than in the previous year when 3,270,500 pounds were taken. New Brunswick, where 1,657,400 pounds were landed, was the only province to show an increased catch, although Nova Scotia's catch of 601,900 pounds was only 11,000 pounds less than in the year before. Quebec's catch was 931,700 pounds, compared with 1,053,600 pounds, and that taken by Prince Edward Island fishermen amounted to 2,100 pounds. The total marketed value of the salmon catch for the coast was $442,496, compared with $406,246 in 1935. (In New Brunswick and Quebec salmon are taken commercially in the inland fisheries as well as in the sea fisheries but of course the results of inland fishing have not been taken into the reckoning in these paragraphs.) Smelts and alewives both showed increased catches, especially the former, with each of the provinces reporting more smelts taken. In New Brunswick there was a large increase in the catch of alewives but in Nova Scotia and Prince Edward Island there were decreases. Alewives are not taken in Quebec. The catch of smelts, 9,300,700 pounds, had a marketed value of $640,222 while in 1935 there were landings of 7,729,900 pounds and a marketed value of $570,745. By provinces, the catches of smelts were,—Nova Scotia, 768,000 pounds, New Brunswick, 6,387,500 pounds, Prince Edward Island, 1,184,300 pounds, and Quebec, 960,900 pounds. The New Brunswick catch represents an increase of more than a million pounds. The greater part of the catch of alewives was landed in New Brunswick where 6,112,200 pounds, out of a total catch of 8,817,300 pounds, were taken. The Nova Scotia catch was 2,670,700 pounds and that of Prince Edward Island 34,400 pounds. The New Brunswick catch represents an increase of 1,298,300 pounds. The marketed value of the catch for the three provinces was $92,654, a slight decrease from the previous year.

Lobsters.—The catch of lobsters for the coast was 28,327,300 pounds with a marketed value of $4,383,428. Notwithstanding a drop in the catch, the value shows an increase due to higher values for both the used fresh and the canned. The catch in the province of New Brunswick was the only one to show an increase, each of the other provinces showing reduced catches. The reduction in landings was largest in Nova Scotia where there was a drop of 3,174,500 pounds.

Other Shellfish.—In addition to lobsters, the Atlantic sea fishermen take scallops, clams, oysters, winkles and crabs, but only the first three of these species have much commercial value. The scallop fishery has developed considerably in the past two or three years, particularly in the Bay of Fundy area off Digby, Nova Scotia, where a fairly large fleet of vessels is engaged in dragging operations during the fishing season. The year's total production of scallops was 170,672 gallons (shelled) with a marketed value of $334,424 which meant increases of 37,537 gallons and $126,783. Of the total landings 163,305 gallons were made in Nova Scotia and they had a marketed value of $322,537. Scallops were also taken in New Brunswick, 7,305 gallons, and Quebec, 152 gallons. Oysters are taken in Nova Scotia, New Brunswick and Prince Edward Island waters. The New Brunswick landings of 9,109 barrels were the largest in 1936, and increased by 738 barrels. Prince Edward Island, with 6,742 barrels, showed a drop of 3,272 barrels and the Nova Scotia landings, 4,919 barrels, a decline of 456 barrels. The marketed value of all the oysters landed on the coast came to $130,235, a small decrease from the previous year. There were 45,914 barrels of clams landed and 2,351 barrels of quahaugs. The greater part of the clams taken are dug in Charlotte county, New Brunswick, and the year's total for this province was 31,231 barrels. Nova Scotia came second with 10,480 barrels. Quebec produced 2,289 barrels and Prince Edward Island 1,914 barrels. The New Brunswick and Prince Edward Island landings were greater than in 1935 while decreases were recorded in the other provinces.

PACIFIC COAST FISHERIES

The catch of all kinds of fish on the Pacific coast amounted to 489,675,300 pounds and the marketed value to $17,231,534, as compared with 404,178,800 pounds having a marketed value of $15,169,529 in 1935. The increase in both catch and marketed value of salmon and herring was mainly responsible for the more favourable showing this year, although returns from a number of the other fisheries helped to swell the total with larger landings and greater marketed value.

Salmon.—The catch was 199,549,900 pounds and marketed value was $13,387,344, compared with landings of 178,943,100 pounds and marketed value of $12,099,275, in the previous year. The pack of 1,881,025 cases shows an increase of 352,003 cases, and the value of the pack, $11,128,636, an increase of $1,474,739. Chums, pinks and sockeyes were the varieties contributing chiefly to such an increase in the pack. The pack of chums, 597,487 cases, was the largest since 1928, while the pink pack of 591,532 cases was the largest since 1930. There were 415,024 cases of sockeyes put up, the largest pack since 1930, and an increase of 64,580 cases over the 1935 production. There was a drop in the quantity of salmon used fresh and also in the mild cured but the quantity of drysalted was slightly larger. The production of salmon oil, 171,326 gallons, was almost three times that of the previous year, and the value was $38,717 or more than three times the earlier year's total. Meal made from salmon waste was 2,083 tons compared with 806 tons, and the marketed value of $66,701 showed a corresponding increase.

Herring.—One of the three most important varieties of fish on this coast is the herring and the catch of 162,062,500 pounds was greater than that of the previous year by 61,211,800 pounds. Its marketed value of $1,142,397 was almost double the 1935 amount. While the drysalted pack was for years the main item in the herring trade, the chief interest last year centered in the production of meal and oil. The output of meal, 10,085 tons, almost doubled and the production of oil, 782,499 gallons, was more than double that of the previous year. The marketed values of the two products were $349,910 and $200,422, respectively, the former being an increase of 138 per cent and the latter 191 per cent. The drysalted pack was 38,333,700 pounds, as compared with 30,271,000 pounds. A feature of the herring operations was the canning of 51,695 cases. This is much the largest quantity canned since 1919 when 64,000 cases were packed.

Halibut.—The catch, by Canadian fishermen, of 10,591,800 pounds, was only slightly greater than that of 1935 when 10,192,700 pounds were landed. Marketed value, $1,039,879 showed an increase of $99,017. Halibut livers sold had a weight of 191,600 pounds and were valued at $96,311, both totals slightly greater than in the previous year. In addition to the landings from Canadian vessels, there were 6,220,300 pounds of halibut landed in British Columbia by United States fishermen, mostly at Prince Rupert, and shipped to United States markets in bond.

Pilchards.—In the case of pilchards, catch and value alike showed a drop, the former at 88,903,700 pounds and the latter $667,313. Although these fish are used chiefly in the production of meal and oil, 35,007 cases were canned and had a marketed value of $102,127. The quantity of meal produced was slightly larger than in 1935 and the 8,715 tons had a value of $274,063. There was a drop in the quantity of oil extracted, 1,217,097 gallons, with a marketed value of $290,216.

Other Fisheries.—Ling cod is of next importance to salmon, halibut, herring and pilchards and in 1936 the catch and its value both increased. The catch was 6,893,200 pounds and the marketed value $392,147. The number of whales taken was 370, which was somewhat greater than in 1935, and the value of the whale products, meal, fertilizer, and oil, totalled $172,201. Grayfish or dogfish are taken for reduction purposes and the value of the oil and meal produced last year, $69,719, was almost fifty per cent greater than in the year before. The value of the clams, crabs and oysters brought ashore showed an increase over the previous year but the quantity and value of shrimps decreased by more than half. The number of fur seals taken by Indians, under the Pelagic Sealing Treaty, was 1,888, as compared with 841 in the previous year.

INLAND FISHERIES

Returns from the inland rivers and lakes of Canada, including those of New Brunswick and Quebec (the sea fisheries results in these provinces are referred to elsewhere in this review) show that 81,342,200 pounds of fish were taken by commercial fishermen in 1936 as compared with 73,553,500 pounds in the previous year. The marketed value of the year's catch came to $6,213,551 as against $5,252,454.

Whitefish are the most valuable species taken in the inland waters and the 1936 catch was worth $1,525,700 as marketed. The Ontario production accounted for more than one-half the value total, or $810,642, although the provincial catch was less than one-half of the Dominion aggregate. Saskatchewan took second place so far as value of whitefish production is concerned, with landings in the province worth $251,012. The catch was larger in each of these provinces than in 1935. In Manitoba, on the other hand, the catch of 2,127,500 pounds was only 56 per cent as large as in the previous year. The whitefish catch and value in Quebec were practically the same as in 1935.

The pickerel catch, 14,563,500 pounds, was valued at $1,109,397, or second in point of value among fresh water fish. Both the catch and the marketed value increased, the former by 3,608,700 pounds and the latter by $307,575. Manitoba produced the most pickerel and the provincial landings of 10,505,400 pounds showed an increase of 3,287,100 pounds. Blue pickerel, taken in the province of Ontario only, shows increased landings, the catch amounting to 6,899,500 pounds and the marketed value to $614,055.

Trout, another of the more important freshwater fish, also shows a larger quantity than in the year before, the catch amounting to 7,297,300 pounds with a marketed value of $842,738. The former figure shows an increase of 664,800 pounds and the latter an increase of $74,170. Most of the trout, 6,458,700 pounds, were landed in Ontario.

The catch of eels in inland Quebec was slightly less than in 1935. Some 2,139,000 pounds were landed with a marketed value of $140,139. Much the greater part of Canada's production of eels comes from the fresh water areas of Quebec.

Note.—The foregoing review of the fisheries of Canada, for the year 1936, is issued through the courtesy of the Deputy Minister of Fisheries, in whose department it was prepared.

FISHERIES STATISTICS

The following table gives a statement for the whole of Canada of all fish caught and marketed during the year 1936, with comparative statistics for 1935. For each kind the total caught and the value at the vessel's or boat's side is first given, this being followed by statements showing the form in which each kind was marketed and the value.

AGENCIES OF PRODUCTION

Primary Operations

Capital.—The value of capital as represented by the vessels, boats, nets and seines, and other fishing equipment, used in the primary operations of catching and landing the fish in 1936, was $27,217,250, of which $22,543,681 is credited to the sea fisheries and $4,673,569 to the inland fisheries. The total amount shows an increase over 1935 of $744,168 and over 1934 of $1,004,547. Both sea and inland fisheries shared in the increase.

Employees.—There were 58,371 fishermen employed in the sea fisheries during the year and 13,364 in the inland fisheries, a total of 71,735, compared with a total of 68,557 in the year 1935. The largest number is employed in fishing from boats, the division of the total being as follows: men fishing from vessels, 5,158; from boats, 59,039; and from shore and through the ice, 7,538.

Fish Canning and Curing Establishments

Capital.—The amount of capital invested in fish canning and curing establishments in 1936 was $18,614,592, apportioned as follows: land, buildings and machinery, $9,648,981; materials and products on hand, stocks in process, etc., $6,286,569; and cash and accounts and bills receivable, $2,679,042. The total investment shows an increase over the preceding year of $1,469,786.

Employees.—Employment figures for the establishments give a total of 15,238 persons in the year 1936, as compared with 14,361 in the preceding year.

Tables 3 to 6, which follow, contain summaries of capital equipment and employees for Canada as a whole; other tables of the introduction present the information by provinces, while statistics by counties and fishing sub-districts will be found in the general tables of the report.

3. Capital Equipment—Primary Operations. Value of Fishing Vessels, Boats, Nets, Traps, Piers and Wharves, etc. Employed in the Canadian Fisheries, 1934, 1935 and 1936.

(a) Comprises value of land, buildings and machinery, products and supplies on hand, cash and accounts and bills receivable.

(b) Although most of the fish meal and oil is produced in establishments classified as "reduction plants", there are small quantities recorded among the products of fish curing establishments.

Details of Fish Canning and Curing Establishments

Number of Establishments.—The fish canning and curing establishments in operation in Canada in 1936 numbered 624, divided by classification as follows: lobster canneries, 304; salmon canneries, 68; clam canneries, 17; sardine and miscellaneous fish canneries, 15; fish curing establishments, 188; freezing plants, 15; and reduction plants, 17. The fish canning and curing industry is confined to the sea fisheries, the plants being built along the coast, on bays and estuaries, in locations where the fishermen can conveniently deliver their catches. In 1936 the distribution of the plants by provinces was as follows: Prince Edward Island, 93; Nova Scotia, 172; New Brunswick, 129; Quebec, 139; and British Columbia, 91. Although British Columbia has the smallest number, the plants in that province are nearly all of large capacity, and their combined value of output represents 61 per cent of the total output of fish canning and curing establishments in the Dominion.

Employees and Salaries and Wages.—The number of persons employed by the establishments was 15,238, this total comprising 558 salaried employees, 10,073 wage-earners, and 4,607 contract and piece workers. The employees in the last mentioned classification are found chiefly in the salmon canneries of British Columbia, where a large part of the work is done under contract, the contractor engaging and paying his own help and being himself paid by the cannery operator according to the quantity of the product. About 75 per cent of the workers in the British Columbia salmon canneries come under this classification.

Statistics of the number of employees in the establishments are based on the average monthly employment of wage-earners, together with the total number of salaried employees and contract and piece workers for the full season, the method of calculation being as follows: on the report of each establishment an addition is made of the number of wage-earners shown for each month, and the resulting total is divided by the number of months the plant was in operation during the year. For example, a cannery employs 12 persons in May, 14 in June, 12 in July and 10 in August—a total of 48. This total is divided by the number of months in operation, viz., 4, and the result gives the number of wage-earners for the establishment as 12. To this number is added the number of salaried employees, and the number of contract and piece workers, which are recorded for the year or season and not by months. The final figure will be the number of employees credited to the establishment for the year, and the compilation of these totals provides the number of employees in the industry. The period of employment varies with the length of the season of operations: the lobster canneries operate from one to three months, and the salmon canneries for longer periods, while many of the fish curing establishments operate during the entire year. In some of the canneries, also, fish curing operations are carried on prior to, and after the close of, the season for canning. The fluctuation in employment is indicated by the statistics of the number of wage-earners employed in each month. Monthly statistics for contract workers are not available, as, owing to the system of employing these workers through a contractor, the cannery operator keeps no record of the number employed each month and does not include in his return any further particulars than the average number for the season and the sum paid for the labour. It should be noted, further, that in this industry, chiefly in connection with the lobster canneries, there are many part-time employees, the work depending to a large extent on the size of the daily deliveries of fish to the canneries. When a large quantity is received, extra help is required for the canning operations, and employment is given to an additional number of persons, many of them women, for perhaps two or three days in the week. No distinction is made in the tables between full time and part time employees.

The total amount paid to all employees during the year was $4,003,850, apportioned as follows: to salaried employees, $734,678; to wage earners, $2,544,903; and to contract and piece workers, $724,269.

The following table gives the number of employees, by classifications of employment, and the salaries and wages paid to each group.

7. Employees in Fish Canning and Curing Establishments in 1934, 1935 and 1936—Number and Salaries and Wages

Year	Employees on Salaries		Employees on Wages		Contract and Piece-Workers		Total of Employees and of Salaries and Wages	
	no.	$	no.	$	no.	$	no.	$
1934	548	676,124	9,642	2,193,995	4,612	684,956	14,802	3,555,075
1935	550	703,075	9,468	2,171,478	4,343	679,395	14,361	3,553,948
1936	558	734,678	10,073	2,544,903	4,607	724,269	15,238	4,003,850

Wage-earners by Months.—Statistics of employment by months are available for wage-earners only—for the other classifications the returns give average number for the year. The months of highest employment for wage-earners were May and June, the former month showing a total of 9,041 and the latter of 9,152. The months with the fewest numbers employed were January with 1,557 and February with 1,553. The lobster canneries have their period of greatest activity in the months of May, June and July, while the salmon canneries have the same months, but with the addition of the month of August. In the other branches of the fish canning and curing industry employment is fairly constant throughout the year. Totalling the number of wage-earners shown in each month and dividing the result by 12, gives an average number for the year 1936 of 4,544 compared with an average of 4,065 in 1935.

Statistics of the monthly employment of wage earners are given in the following table.

8. Wage-earners in Fish Canning and Curing Establishments—Number on Pay Roll on 15th of each month, 1934, 1935 and 1936 (a)

Classified Weekly Wage Payments.—Included in the annual census of industry is a special inquiry regarding amounts paid to manual workers for any week in the month of employment of greatest number. The table appended gives the result of the compilation of returns for the years 1935 and 1936. The inquiry, it should be understood, asks for the actual amounts paid during the week, and not for the weekly wage rates. The largest numbers of workers in both years are in the group of those receiving less than $6 for the week, but it is probable that most of these are part-time workers.

(a) Exclusive of contract workers and piece workers.

9. Classified Weekly Wage Payments—Amounts Paid to Manual Workers in Fish Canning and Curing Establishments for one week in month of Greatest Employment, 1935 and 1936. (a)

20.00 to 20.99	254	29	443	55	**Total**	**7,902**	**5,590**	**9,544**	**5,755**

Materials Used.—The cost value of all materials used during the year was $16,459,938, this sum comprising $11,916,080 for the fish used, $3,672,437 for the containers, and $871,421 for the edible oils, salt and miscellaneous materials. The total value shows an increase over the preceding year of $1,687,216. The deliveries of fish to the establishments in 1936 had a total weight of 7,786,296 cwt., or 76 per cent of the total catch of sea fish in the year. The quantity marketed directly by the fishermen, either for consumption fresh or as domestically prepared, accounts for the remaining 24 per cent of the catch.

The following table gives the quantity and value of fish and other materials used in each of the years, 1934 to 1936.

10. Quantity and Value of Materials Used in Fish Canning and Curing Establishments, 1934, 1935 and 1936

Materials	1934		1935		1936	
	Quantity	Value	Quantity	Value	Quantity	Value
		$		$		$
Fish ..... cwt.	5,612,561	11,638,820	6,237,719	10,958,895	7,786,296	11,916,080
Edible oils ..... gal.	(b)	–	(b)	–	178,208	137,144
Salt ..... cwt.	460,950	236,185	427,867	212,554	535,326	256,651
Containers	–	3,345,792	–	3,152,924	–	3,672,437
Other materials	–	346,363	–	448,349	–	477,626
Total	–	**15,567,160**	–	**14,772,722**	–	**16,459,938**

Production.—The value of production in the fish canning and curing industry in 1936 was $26,684,801, of which $20,254,627 is recorded as the value of the fish, canned, cured, etc., and $6,430,174 as the sum received for the fish marketed for consumption fresh. The salmon canneries are of chief importance with regard to total output, this branch of the industry showing a value of $12,966,038, or 49 per cent of the total production for all establishments. Next in order of value is the product of the fish curing establishments with $6,676,709, or 25 per cent of the whole, and following are the lobster canneries with $3,351,706, or 12 per cent; sardine and miscellaneous fish canneries, $2,031,900 or 8 per cent; reduction plants, $980,072, or 4 per cent; and freezing plants, $587,292, or 2 per cent. The output of the clam canneries amounted to $91,084, or less than one-half of one per cent of the whole. By provinces, the production values are as follows:

(a) Exclusive of contract workers and piece-workers.
(b) Not shown separately prior to 1936.

British Columbia, $16,364,712; or 61 per cent of the total for Canada; Nova Scotia, $6,164,488, or 23 per cent; New Brunswick, $2,768,926, or 10 per cent; Quebec, $706,392, or 3 per cent; and Prince Edward Island, $680,283, or 3 per cent. The value for the establishments represents 81 per cent of the total marketed value of production of the sea fisheries in 1936, while the value of the fish marketed directly by the fishermen, either for consumption fresh or as domestically prepared, represents the remaining 19 per cent.

The following table classifies the establishments and shows the total value of production for each classification, in the years 1934 to 1936.

11. Value of Production of Fish Canning and Curing Establishments

Description of establishment	1934			1935			1936

General Tables.—A section of the general tabular matter of the report is devoted to the statistics of fish canning and curing establishments, and in this section information regarding capital, employees, salaries and wages, value of production, and other phases, which has been briefly summarized in the foregoing paragraphs, is given in detail, by provinces and by counties or districts.

Review by Provinces

The following tables (12-18) show by provinces: the total value of the fisheries; the quantity caught and landed and the value marketed of the chief commercial fishes; the quantity and value of all fish caught and landed and marketed; the total values for counties or districts of sea fish caught and landed and marketed; the quantity of sea fish taken offshore; the capital equipment; and the number of employees.

12. Value of Fisheries by Provinces, 1932-1936, in Order of Value, 1936

Province	1932	1933	1934	1935	1936	Increase or decrease 1936 compared with 1935 Inc. + Dec. −

FISHING BOUNTY

Under the authority of "An Act to encourage the Development of the Sea Fisheries and the Building of Fishing Vessels" the sum of $160,000 is appropriated annually by the Governor in Council. It is distributed under the name of Fishing Bounty by the Department of Fisheries amongst fishermen and fishing vessel and boat owners on the Atlantic coast, under regulations made from time to time by the Governor in Council.

For the year 1936, payment was made on the following basis:—

To owners of vessels entitled to receive bounty—$1 per registered ton; payment to the owner of any one vessel not to exceed $80.

To vessel fishermen entitled to receive bounty—$6.60 each.

To owners of boats measuring not less than 12 feet keel—$1 per boat.

To boat fishermen entitled to receive bounty—$5.70.

The total amount paid in 1936 was $159,977.75, allocated as follows:—

To 529 vessels and their crews	$ 31,633.60
To 11,764 boats and their crews	$ 128,344.15

FOREIGN TRADE

Exports.—The export trade in fish and fishery products dropped considerably during the depression, but recovery commenced in 1933 and the trade has since shown a steady advance. In 1936 the total value of exports was $25,398,102, an increase over the preceding year of $538,616, or 2 per cent, and over 1932, the low year of the depression period, of $6,645,995, or 35 per cent. The principal item in every year is canned salmon, and in 1936 the value of exports of this product was $6,367,323. Other principal items, in order of value in 1936, are lobster in shell ($2,100,762); canned lobster ($2,080,005); whitefish, fresh ($1,458,827); salmon, fresh ($1,455,878); and dried cod ($1,074,572). The countries to which Canadian fish of one kind or another was exported in 1936 numbered 85. The United Kingdom took goods to the value of $5,781,730, or 23 per cent of the total exports, while the United States took $12,917,592, or 51 per cent. The exports to Australia were valued at $1,668,594.

Imports.—The imports into Canada, for consumption, of fish and fishery products during the year 1936 had a total value of $2,918,251, compared with $2,597,856 in 1935 and $2,122,748 in 1934. Among the principal items are sardines from Norway, oysters and canned tuna from the United States, and crabs or clams from the United States and Japan. There are also considerable imports of fish oil, chiefly cod liver oil and whale oil.

HISTORICAL REVIEW

The five tables following will afford a review of the fishing industry of Canada for the past several years. In the case of production, returns are given, by provinces, back to 1870. In the case of the number and value of vessels, boats, etc., the review extends to 1880, and in the case of the number of employees to 1895.

19. Historical Review—(a) Total Value of the Fisheries in the Respective Provinces of Canada, for the years 1870 and 1875 to 1936

20. Table for Conversion of Weights of Fish

Fresh fish in this table in the case of cod, haddock, hake and cusk, pollock and halibut (Atlantic) means fish with the head on and the entrails removed. The weight of halibut on the Pacific coast is to be the weight minus head and entrails. In the case of swordfish and tuna, it means fish with the head, tail and entrails removed. In other cases, fresh fish means fish as it comes from the water.

COD, HADDOCK, HAKE AND CUSK OR POLLOCK

300 lb. of fresh produce one cwt. of fresh fillets.
160 lb. of fresh produce one case of canned.
200 lb. of fresh produce one cwt. of green salted.
200 lb. of fresh produce one cwt. of pickle cured.
300 lb. of fresh produce one cwt. of smoked fillets.
200 lb. of fresh produce one cwt. of smoked.
300 lb. of fresh produce one cwt. (100 lb.) of dried.
400 lb. of fresh produce one cwt. of boneless.

HERRING

70 lb. of fresh produce one case of canned.
200 lb. of fresh produce one cwt. of smoked.
300 lb. of fresh produce one barrel of pickled.
200 lb. of fresh produce one barrel of bait (fresh or salted).
200 lb. of fresh produce one barrel of fertilizer.
125 lb. of fresh produce one cwt. of dry salted.

MACKEREL OR SHAD

70 lb. of fresh produce one case of canned.
300 lb. of fresh produce one barrel of pickled.
400 lb. of fresh produce one barrel of salt mackerel fillets.

SARDINES

One barrel of fresh produces 4¼ cases canned.
(One case of 25 lb. equals 100 tins ¼ lb. each.)

PILCHARDS

70 lb. of fresh produce one case of canned.
200 lb. of fresh produce one barrel of bait.

ALEWIVES

200 lb. of fresh produce one cwt. of smoked.
275 lb. of fresh produce one barrel of pickled.

SALMON

84 lb. of fresh (Pacific) produce one 48-lb. case canned.
70 lb. of fresh (Atlantic) produce one 48-lb. case canned.
170 lb. of fresh produce one cwt. of smoked.
125 lb. of fresh produce one cwt. of dry salted.
150 lb. of fresh produce one cwt. of mild cured.
150 lb. of fresh produce one cwt. of pickled.

TUNA

100 lb. of fresh produce one case canned.

SQUID

One barrel weighs 250 pounds.

CLAMS

One barrel of fresh produces one case of canned. (48 tins of 6 oz. of clam meat each.)

LOBSTERS

200 lb. of fresh produce one case of canned. (48 tins of 12 oz. lobster meat each.)
500 lb. of fresh produce one cwt. of lobster meat.

The following statement prepared from Canadian fisheries statistics for the year shows the catches by Canadian fishermen in 1936 in certain areas defined by the North American Council on Fishery Investigations, an International body representative of Canada, United States, Newfoundland and France for the co-ordination of fishery investigations in the Atlantic waters of the Continent. The boundaries of the areas are indicated on the accompanying chart.

III. (9) Fisheries Production in 1936 in Certain Areas Defined by the North American Council on Fishery Investigations

Kind of Fish	Area No. 19	Area No. 20	Area No. 21	Area No. 22

PRÉFACE

Ce rapport est publié en vertu d'une entente établissant la coopération en matière de statistique entre le Bureau Fédéral de la Statistique et les différents services gouvernementaux ayant juridiction sur les pêcheries canadiennes. Ces services comprennent le ministère fédéral des Pêcheries, qui exerce sa juridiction sur les pêcheries des Provinces Maritimes, du Yukon, de la Colombie Britannique et des îles de la Madeleine, et les divisions des Pêcheries des provinces d'Ontario, Québec, Manitoba, Saskatchewan et Alberta, qui régissent les pêcheries de leurs provinces respectives, sauf les pêcheries des îles de la Madeleine, en Québec, lesquelles sont sous la juridiction du ministère des Pêcheries du Dominion. La Colombie Britannique possède une division des Pêcheries, mais cet organisme ne s'occupe pas de statistique pour son propre compte.

En vertu de l'arrangement dont il est parlé plus haut, les statistiques du poisson pêché, et des produits offerts en vente à l'état frais ou après une préparation sommaire, sont recueillies par les fonctionnaires locaux du ministère des Pêcheries, vérifiées et condensées au ministère des Pêcheries, puis compilées au Bureau Fédéral de la Statistique. En ce qui concerne le poisson industriellement préparé et ses sous-produits, des formules similaires à celles en usage dans le recensement des autres branches de la production sont envoyées directement par le Bureau aux usines poissonnières, les fonctionnaires des services des Pêcheries s'assurant que ces formules sont consciencieusement remplies et promptement retournées. Les fonctionnaires des gouvernements provinciaux voudront bien accepter nos remerciements pour le concours qu'ils nous ont prêté.

R. H. COATS,

Statisticien du Dominion.

Bureau fédéral de la statistique,

Ottawa, le 12 octobre 1937.

LES PÊCHERIES DU CANADA

Le début des pêcheries.—*La pêche est une des plus anciennes industries du Canada. Laissant de côté les traditions et les légendes pour s'en remettre aux faits établis, il faut admettre que c'est à Cabot que revient l'honneur d'avoir découvert, en 1497, les bancs de morue de Terre-Neuve, quand il vit pour la première fois la terre ferme de l'Amérique du Nord. Il rapporta que la mer y était si poissonneuse qu'il était possible de pêcher "avec un panier dans lequel il y avait une pierre pour le faire plonger." Cap-Breton, l'un des plus anciens noms géographiques de l'Amérique, est un souvenir des premiers pêcheurs français que les Espagnols et les Portugais ne tardèrent pas à suivre. Fernandez de Navarette nous apprend que des pêcheurs de ces trois nationalités fréquentaient le Grand Banc en 1502. La pêche se pratiquait au moyen de lignes à main passées sur des barils fixés à l'extérieur du passavant pour éviter le contact des lignes avec les flancs du navire; les bateaux de pêche se livraient à leurs opérations tant que durait le beau temps, puis s'en retournaient en France avec leurs prises de 30,000 à 50,000 morues. Les voyages entrepris le long du littoral démontrèrent bientôt que la morue était aussi abondante en vue du rivage que sur les bancs lointains, et les équipages s'accoutumèrent alors à jeter l'ancre dans une baie, à construire une hutte sur la grève et à faire dans leurs petites chaloupes des excursions quotidiennes dont le produit était salé et séché à terre, puis expédié en France à la fin de la saison. Lorsqu'il remonta le Saint-Laurent, en 1534, Jacques Cartier trouva partout les traces du passage de ces "capitaines courageux" et de leurs rivalités, lesquelles s'exerçaient aussi bien dans des rencontres armées que dans la capture du poisson qui les avait attirés si loin de chez eux. Chauvin fonda un établissement de cette sorte à Tadoussac, en 1599. Bientôt après les pêcheurs s'habituèrent à passer l'hiver en Amérique et à y construire de véritables villages. La première concession de pêche fut octroyée par le roi de France à de Monts, en 1603. On peut donc considérer la pêche comme la première industrie à laquelle se soient livrés systématiquement les Européens au Canada; depuis ces temps lointains elle n'a jamais cessé de donner sa récolte annuelle.*

Le traité d'Utrecht de 1713 attribua Terre-Neuve à la Grande-Bretagne, dépossédant la France de son droit de pêcher et de faire sécher le poisson sur certaines sections du littoral de cette île, mais la France conserva les pêcheries de Cap-Breton et celles du golfe. La guerre de Sept Ans (1756-63) interrompit les opérations de pêche sur une vaste échelle. Lorsqu'elle se termina, la famille Robin, de Jersey, vint au Canada et au moyen d'acquisitions graduelles s'empara de toutes les anciennes stations de pêche françaises. Jusqu'à l'arrivée des Loyalistes, les pêcheurs s'étaient occupés exclusivement de la morue. Seules les pêcheries côtières étaient exploitées durant cette phase, y compris celles du littoral du Labrador; ce ne fut qu'en 1873 qu'un navire de pêche en haute mer sortit du port de Lunenburg qui est maintenant le centre principal de la grande pêche.

Lieux de pêche du Canada.—*Les pêcheries canadiennes sont probablement les plus vastes de l'univers. Sur l'Atlantique, depuis Grand Manan jusqu'au Labrador, le rivage mesure plus de 5,000 milles, à l'exclusion des anses et échancrures qui le dentellent. La baie de Fundy avec 8,000 milles carrés, le golfe Saint-Laurent dix fois plus grand, et d'autres eaux océaniques représentent ensemble environ 200,000 milles carrés, c'est-à-dire plus des quatre cinquièmes des pêcheries du nord de l'Atlantique. De plus, l'on compte sur les bords de l'Atlantique 15,000 milles carrés d'eaux territoriales sous le contrôle absolu de la Puissance. Mais ces vastes étendues ne représentent qu'une partie des eaux canadiennes. Sur le Pacifique, le littoral canadien mesure 7,180 milles; ses baies et fiords innombrables offrent aux pêcheurs une multitude d'abris très sûrs. Enfin, disséminés sur tout le territoire s'égrènent une série de lacs qui, tous ensemble, contiennent plus de la moitié des eaux douces du globe, la part du Canada dans les Grands Lacs seulement couvrant plus de 34,000 milles carrés, auxquels viennent s'ajouter le lac Winnipeg (9,457 milles carrés), le lac Manitoba et de nombreux autres non moins vastes.*

Mais la qualité des produits des pêcheries canadiennes est encore plus remarquable. Chacun sait que l'excellence de la chair du poisson est en proportion directe de la pureté et de la fraîcheur des eaux qu'il habite. Considérés sous cet angle le saumon, la morue, le flétan, le hareng, le maquereau et le corégone du Canada n'ont pas de rivaux dans l'univers. Il est donc évident que les plus magnifiques pêcheries de l'hémisphère occidental, sinon du globe, appartiennent au Canada.

Le bref exposé qui précède démontre qu'il est impossible d'envisager les pêcheries canadiennes sous un unique aspect; embrassant tout un continent, elles offrent nécessairement une grande diversité. Laissant de côté la baie d'Hudson et la région subarctique qui s'étend depuis l'Ungava jusqu'à l'Alaska, on peut diviser ainsi qu'il suit les pêcheries canadiennes:

1. PÊCHERIES DE L'ATLANTIQUE.—*Elles sont les premières en date, et jusqu'en 1918 elles furent les plus importantes par la valeur de leurs produits. On y prend la morue, le flétan, l'églefin, le hareng, le maquereau, l'éperlan, la sardine, l'espadon, le homard et l'huître. Le golfe et les eaux intérieures des Provinces Maritimes et du Québec sont quelquefois considérés distinctement; mais en les réunissant, la liste ci-dessus s'accroîtrait du saumon, de l'alose, du gasparot, de l'éperlan, du bar d'Amérique, de la petite morue et du maskinongé. Les opérations de pêche sont communément considérées sous deux aspects distincts, la pêche hauturière ou de haute mer et la pêche côtière. Cette dernière se pratique au moyen de petites embarcations le plus souvent automotrices, montées par deux ou trois hommes; on y emploie aussi de petits navires dont l'équipage se compose de quatre à sept hommes. Les engins de pêche le plus fréquemment employés sont les rets à mailles, les lignes à main et les chaluts; d'autre part, on dispose le long du rivage des filets, des seines et des nasses. L'églefin, comme la morue, est un produit de consommation courante; le printemps et l'été ce poisson est ouvert et salé mais la meilleure saison est l'automne, le poisson étant alors expédié frais ou fumé. La pêche en haute mer se pratique au moyen de navires de 40 à 100 tonnes, portant de douze à vingt hommes, qui pêchent surtout dans des doris au moyen de lignes de fond; en outre, on pêche parfois directement des navires au moyen de lignes à main. Les flottilles fréquentent tour à tour les différents bancs de pêche tels que le Grand Banc, le Banc Intermédiaire et le Banquereau. Ces navires, construits sur place, restent quelquefois plusieurs mois en mer; les naufrages sont rares, tant est grande l'habileté de leurs équipages. A leur retour, le poisson, qui a été vidé et salé à bord, est débarqué, lavé et séché. Les Antilles sont le principal débouché de ce produit; aucune autre morue ne pourrait supporter le climat tropical aussi bien que celle préparée par les pêcheurs de la Nouvelle-Ecosse. De grands chalutiers à vapeur, tels que ceux en usage dans la mer du Nord, ont été introduits depuis plusieurs années dans les pêcheries canadiennes du littoral de l'Atlantique. Ces chalutiers se livrent à la pêche presque toute l'année; leurs prises approvisionnent le commerce de poisson frais. En vertu de la loi des pêcheries, les chalutiers doivent être inscrits comme navires britanniques au Canada, appartenir à des gens du Canada, et être pourvus d'un permis émanant du ministre des Pêcheries; leurs opérations doivent se restreindre aux eaux situées à 12 milles au moins du littoral.*

La pêche du homard est une autre industrie caractéristique. En 1870, il n'existait que trois homarderies sur le littoral de l'Atlantique; en 1936 on en compte 304, occupant plus de 6,000 personnes; 30,000,000 de homards constituent une prise normale. L'un des constants problèmes de cette industrie, c'est d'assurer l'exécution des dispositions prohibant la capture des jeunes homards et des adultes au moment du frai; on croit qu'avec la coopération des pêcheurs le rendement de cette pêche peut se maintenir. Au Nouveau-Brunswick, la mise en boîte des sardines, qui sont de jeunes harengs et non une espèce distincte, est une industrie comparable en importance à celle du homard, qu'elle a en fait dépassée ces trois dernières années au point de vue de la valeur. Grâce à l'ostréiculture, que le Gouvernement a développée, l'huître autrefois abondante mais qui avait de beaucoup diminué pendant un

certain nombre d'années a été plus nombreuse cette année. On a mis du naissain dans les endroits favorables des eaux de l'Ile du Prince-Edouard et de la Nouvelle-Ecosse. Ce travail est dirigé par des experts en ostréiculture.

Les pêcheurs des Provinces Maritimes constituent une population industrielle spécialisée. La pêche côtière s'y pratique d'avril à novembre, et même en janvier, dans les districts abrités et, quoique les plus grands navires travaillent pendant tout l'hiver, plusieurs milliers d'hommes sont disponibles à certains moments de l'année pour d'autres travaux. Les uns cultivent des parcelles de terre entourant leurs maisons, les autres travaillent dans les chantiers de bois du Nouveau-Brunswick ou bien dans les charbonnages de la Nouvelle-Ecosse. Quelques pêcheurs de Lunenburg et d'ailleurs font du négoce avec les Antilles. Outre les restrictions imposées par la température et les saisons fermées, la méthode généralement répandue de payer les hommes au tantième tend encore, les années où la prise et les prix sont faibles, à les attirer vers les occupations secondaires.

2. Pêcheries intérieures.—*Les Grands Lacs et les eaux tributaires du St-Laurent constituent une seconde grande division des pêcheries canadiennes. La valeur des pêcheries intérieures du Québec se compose principalement de produits de la pêche à l'anguille, au doré et à l'esturgeon. En Ontario, le corégone, la truite, le doré et le hareng des lacs sont les poissons les plus importants, commercialement parlant, quoique le brochet, l'esturgeon et quelques autres poissons ne soient pas à dédaigner. Dans les Grands Lacs la saison de pêche dure de six à huit mois; quelques pêcheurs continuent leurs opérations durant l'hiver en creusant des trous dans la glace, mais le plus grand nombre cherchent une autre occupation dans l'intermède des saisons. En se dirigeant plus à l'ouest le lac Winnipeg, le lac Winnipegosis, le lac Manitoba et des lacs plus petits au nord et à l'est de celui-ci fournissent la plupart des poissons du Manitoba. Le corégone et le doré sont les principaux d'entre eux, mais le brochet, le tullibee, l'œil-d'or et nombre d'autres variétés s'y trouvent aussi. En Saskatchewan et en Alberta, la pêche pour le commerce est confinée aux régions situées au nord de la rivière Saskatchewan où l'on prend de grandes quantités de corégone. Les difficultés du transport n'ont pas encore été surmontées; quelques-uns des plus grands lacs du continent, les lacs Reindeer, Grand Esclave, Grand Ours et des centaines de lacs plus petits n'ont aucune communication avec les marchés de consommation. Toutefois, les lacs de l'Ouest jouent le même rôle que le St-Laurent au temps du régime français et que les bancs de morue dans l'histoire de la Nouvelle-Angleterre, en facilitant la colonisation du pays, puisqu'ils offrent un aliment certain aux colons nouvellement arrivés.*

3. Pêcheries du Pacifique.—*La Colombie Britannique possède des pêcheries d'eau douce presque similaires à celles de la région des Prairies; il est douteux que le commerce des fourrures (qui devait être l'agent de liaison entre cette province et le reste du Canada à travers les Montagnes Rocheuses) eût pu s'établir au commencement de l'histoire de cette province si ces pêcheries n'avaient pas existé. Les pêcheries de la Colombie Britannique sont d'une grande richesse; elles représentent environ les deux cinquièmes de l'industrie poissonnière du Canada et ses produits se consomment jusqu'aux extrémités de la terre; ils sont essentiellement constitués par le saumon pêché à l'embouchure du fleuve Fraser, de la Skeena, de la Naas et d'autres rivières qui descendent le versant occidental des montagnes. Chacune des variétés de ce roi des poissons comestibles (qui toutefois n'est pas le* salmo salar *ou vrai saumon) fréquentant les eaux du Pacifique se trouve sur le littoral de la Colombie Britannique, c'est-à-dire le sockeye ou dos bleu, le saumon de printemps, le saumon argenté, le saumon rose et le saumon bécard. Entre tous ceux-ci, le dos bleu, bien qu'il ne donne pas d'aussi fortes prises que le saumon rose et le bécard, est de beaucoup le plus important, en raison de l'excellence de sa chair, dont la belle couleur rougeâtre est tant appréciée des consommateurs de la Grande-Bretagne et des pays étrangers. Le fleuve Fraser était autrefois la principale source d'approvisionnement de saumon, mais sa production est aujourd'hui dépassée par celle de la rivière*

Skeena et de ses tributaires septentrionaux; la prise varie considérablement d'année en année. La montée du saumon commence vers la fin de juillet et atteint son apogée dans les premières semaines d'août; néanmoins, les régions septentrionales ont une saison plus hâtive. Le saumon de printemps ou quinnat est un très gros poisson; c'est la première espèce qui fut mise en boîte aux Etats-Unis; la migration de ce poisson s'opère au commencement du printemps et se continue jusqu'en juillet. Le saumon argenté est plus petit; comme le dos bleu, il voyage par bandes innombrables, pendant septembre et octobre, dans le fleuve Fraser, et un peu plus tôt dans les cours d'eau plus au nord. Le saumon bécard est mis en boîte et une quantité considérable est salée pour l'exportation en Orient. Le saumon rose, lui aussi, suit le dos bleu. Le plus grand nombre de personnes qu'occupe cette pêche sont des Chinois, des Japonais et des Indiens, les Chinois étant employés dans les usines, tandis que les Indiens et les Japonais se consacrent plutôt aux opérations de pêche.

Le flétan abonde à hauteur de l'île Vancouver et entre les îles de la Reine Charlotte et le continent; quoique la première tentative d'exploitation industrielle de ce poisson ait avorté, dès 1903 la Colombie Britannique contribuait pour 10,000,000 de livres à la production de 25,000,000 de livres pêchées sur le littoral du Pacifique, au nord de la Californie, chiffre qui a triplé depuis plusieurs années, bien que depuis 1930 cette pêche ait diminué à la suite des restrictions imposées en vertu des dispositions du traité conclu entre le Canada et les Etats-Unis pour la conservation de ces pêcheries. La prise annuelle de hareng de la Colombie Britannique représente environ 56 p.c. de tout le hareng de mer pêché dans les eaux canadiennes. Ce poisson est presque en entier salé à sec et exporté en Chine et au Japon. Depuis quelques années, la pêche au pilchard a pris une certaine importance, la plus grande partie de la prise allant aux huileries qui produisent chaque année de grandes quantités d'huile et de poudre de poisson. On y pêche aussi la baleine et deux stations sont en opération dans les îles de la Reine Charlotte. On y pêche des cétacés de différentes sortes; baleines franches, rorquals, dauphins et cachalots. La pêche à la baleine se pratique dans des bateaux rapides armés de canons lance-harpon Svend Foyn, système venu de Norvège. Aucune partie de la baleine ne se perd, l'huile et la poudre ou engrais en sont les produits les plus importants. Le cabillaud, la lingue, l'oulachon, le turbot, la raie, la sole, la coque et l'huître sont également abondants dans les eaux de la Colombie Britannique.

Il convient d'ajouter un mot concernant les pêcheries de phoque à fourrure du Pacifique dont le siège historique était autrefois à Victoria. Au début du siècle actuel, par suite de la raréfaction des animaux, cette industrie n'avait plus qu'une bien faible importance, et en 1911 un traité fut conclu entre la Grande-Bretagne, les Etats-Unis, le Japon et la Russie, à l'effet d'interdire la pêche pélagique ou hauturière. Ce traité, qui est resté en vigueur, a pour objet la conservation du phoque et il en est résulté un accroissement considérable des bandes de ces animaux. A titre de compensation pour la renonciation à ses droits de pêche au phoque, le Canada touche annuellement des gouvernements des Etats-Unis, du Japon et de la Russie une part du revenu de la pêche du phoque aux îles Pribaloff et à d'autres endroits, appartenant à ces trois pays, où se trouvent des colonies de phoques. Les Indiens de la Colombie Britannique sont exempts des dispositions de ce traité, mais ils ne peuvent pratiquer ce genre de chasse qu'à l'aide de bateaux non pontés, dont chacun ne peut avoir un équipage de plus de cinq personnes, l'emploi d'armes à feu leur étant interdit

Le sport de la pêche.—*Le relevé ci-dessus est purement industriel et commercial; mais le sport de la pêche comporte un aspect économique dans un pays où foisonnent des poissons aussi réputés que le saumon de la Restigouche et autres rivières du Nouveau-Brunswick, l'achigan et la truite mouchetée du Québec et des hautes terres d'Ontario, la truite rouge du Nipigon et le saumon et la truite arc-en-ciel de la Colombie Britannique. Le gouvernement perçoit des revenus fort élevés en vertu soit à des clubs, soit à des particuliers, le droit de pêche dans les lacs et les cours d'eau des contrées les moins peuplées; d'autre part, des centaines de guides y trouvent une occupation pendant les mois d'été.*

LE GOUVERNEMENT ET LES PÊCHERIES*

Dès l'organisation du Gouvernement fédéral à la Confédération, le ministère de la Marine et des Pêcheries administrait les pêcheries canadiennes. De bonne heure en 1930 un ministère des Pêcheries, sous la direction d'un ministre, a été organisé. Ce ministère administre maintenant toutes les pêcheries en eau salée (excepté celles de la partie continentale du Québec qui, en vertu d'un accord, relèvent de l'administration provinciale), les pêcheries en eau douce de la Nouvelle-Ecosse et les pêcheries du Yukon et des Territoires du Nord-Ouest. Les pêcheries en eau douce du Nouveau-Brunswick, de l'Ile du Prince-Edouard, d'Ontario, des Provinces des Prairies et de la Colombie Britannique, et les pêcheries du Québec, tant en eau salée qu'en eau douce, (excepté celles des îles de la Madeleine) sont administrées par les provinces respectives, bien que le ministère fédéral exécute certains travaux de protection dans les eaux douces du Nouveau-Brunswick, de l'Ile du Prince-Edouard et de la Colombie Britannique. Cependant, le gouvernement fédéral possède seul le droit de légiférer sur les pêcheries. (Voir la loi des pêcheries, 22-23 Geo. V, c. 42.) L'année fiscale 1936-37 les dépenses du Dominion pour les pêcheries, y compris les salaires du gouvernement civil, les contingences, etc., sont de $2,036,892 et les revenus, de $176,730.

Conservation.—*Les pêcheries fluviales et lacustres incontestablement, et les pêcheries maritimes probablement, si elles étaient abandonnées à elles-mêmes, subiraient la loi économique de l'appauvrissement. Pour combattre cette tendance le gouvernement canadien dut légiférer, interdisant la pêche en certaines saisons, la pollution des rivières et l'obstruction de leur cours; il dut aussi spécifier les dimensions des mailles de filets, réglementer les agrès et les opérations de pêche. En outre, un vaste système de pisciculture a été organisé. En 1936 le Dominion a exploité 23 frayères, 8 viviers auxiliaires, 2 aleviniers, 8 bassins à saumon et plusieurs stations de cueillette des œufs, ayant coûté $214,529 et ayant distribué 11,672,401 alevins et poissons des espèces saumon et truite. Ces alevins sont distribués gratuitement si les eaux où ils doivent être placés sont convenables et accessibles au public pour la pêche. Le ministère fédéral des Pêcheries poursuit depuis 1929 des recherches et des expériences en ostréiculture à la baie Malpeque, Ile du Prince-Edouard; elles s'étendent maintenant à certaines régions de la Nouvelle-Ecosse.*

Aide directe.—*Sur la côte de l'Atlantique où les conditions qui accompagnent les opérations de la pêche rendent un tel service désirable, il a été établi un système de radio qui émet des rapports sur les probabilités de température, les approvisionnements de boitte et de glace et les conditions de la glace. En outre, sous l'empire de la loi de l'inspection du poisson (S.R.C., 1927, c. 72) des systèmes d'instruction sur les nouvelles méthodes de saurissage et de fabrication des barils ont été en opération pendant plusieurs années.*

Le Parlement a voté la somme de $300,000 qu'il a mise à la disposition du ministère des Pêcheries pour l'année fiscale 1936-37 afin d'aider, en coopération avec les provinces concernées, au rétablissement des pêcheurs nécessiteux. Quatre provinces où les pêcheries sont administrées en tout ou en partie par le fédéral—la Nouvelle-Ecosse, le Nouveau-Brunswick, l'Ile du Prince-Edouard et le Québec—ont conclu des accords avec les autorités fédérales pour réaliser l'objet de cet article du budget. Dans chacune des quatre provinces le ministère des Pêcheries a fait des déboursés égaux à ceux des gouvernements provinciaux pour aider directement les pêcheurs nécessiteux; les dépenses totales sur le crédit alloué au ministère se sont élevées à $200,007.73. Dans le Québec 8,930 pêcheurs ont reçu des secours. Dans les Provinces Maritimes le plan adopté consistait à faire des prêts aux pêcheurs et aux associations de pêcheurs, dans les trois provinces 6,649 pêcheurs et 22 associations ont été aidés de cette façon.

Dans un autre effort pour venir en aide aux pêcheurs—il s'agissait en l'occurrence d'accroître la demande de leurs produits—le ministère des Pêcheries a inauguré pendant l'année fiscale une vaste campagne de publicité et les dépenses en

*Revisé sous la direction de W. A. Found, sous-ministre, ministère des Pêcheries, Ottawa.

ont été défrayées avec le crédit spécial de $200,000 voté par le Parlement. La publicité a surtout été faite dans le Dominion, mais $25,000 ont été dépensés au Royaume-Uni dans le but d'augmenter principalement les ventes de homard et de saumon canadiens en boîte. Au Canada des publications diverses ont été distribuées en grand nombre pendant la campagne, qui s'est étendue à toutes les parties du pays et qui attirait l'attention sur la valeur des produits canadiens de la pêche en général.

Recherches scientifiques.—*A Halifax, N.-E., St. Andrews, N.-B., Nanaimo et Prince-Rupert, C.B., et dans le comté de Gaspé, Québec, se trouvent des stations sous la direction du Service Biologique du Dominion pour l'étude des nombreux problèmes complexes inhérents aux pêcheries. Les stations de St. Andrews et de Nanaimo s'occupent principalement des problèmes de pisciculture et les stations expérimentales d'Halifax, de Prince-Rupert et du comté de Gaspé consacrent leur attention aux problèmes de l'industrie poissonnière. A Ellerslie, Ile du Prince-Edouard, se trouve une station biologique marine s'occupant d'ostréiculture, et une sous-station, à Cultus-Lake, Colombie Britannique, s'occupe tout spécialement de recherches concernant le saumon. Le Service Biologique du Canada emploie un personnel permanent de techniciens. Les habitudes et coutumes des poissons comestibles, la bactériologie du poissons frais ou conservé, l'amélioration des méthodes de manutention et de préparation du poisson, et de nombreux autres problèmes pratiques ont fait le sujet d'importants mémoires et rapports scientifiques.*

Problèmes internationaux.—*Le principal problème international concernant les pêcheries a été la question des privilèges des Etats-Unis dans les pêcheries de l'Atlantique. Les détails de l'histoire de cette question pour le dernier siècle et demi paraissent aux pp. 233-234 de la Statistique des Pêcheries, 1935. Depuis 1933, en vertu de l'ancien système des "licences de* modus vivendi*", résultat du traité de 1888 qui, cependant, n'a jamais été ratifié, les vaisseaux des Etats-Unis ont encore reçu la permission d'entrer dans les ports canadiens pour acheter de la boitte et tous autres approvisionnements.*

Dans les Grands Lacs également, les problèmes les plus importants, tels que le repeuplement et la disposition du poisson, ont nécessairement un caractère international et se compliquent du nombre d'Etats intéressés. La pêche du sockeye a fait surgir une situation analogue sur la côte du Pacifique où les conserveurs de Puget-Sound prennent le sockeye du fleuve Fraser, C.B., en quantités qui surpassent de beaucoup la prise des conserveurs canadiens. Dans le but de régler la question divers traités ont été signés, mais jusqu'ici aucun n'a été mis en vigueur.

*Les résultats ont été meilleurs dans la solution du problème international concernant la pêche du flétan sur la Pacifique, qui a été réglée par le traité "pour la protection du flétan du Pacifique", signé par le Canada et les Etats-Unis le 2 mars 1923. En vertu de ce traité, la pêche du flétan est interdite pendant un certain temps chaque année. Une autre convention, signée par les plénipotentiaires des deux pays à Ottawa le 9 mai 1930 et ratifiée par les gouvernements respectifs des pays le 9 mai 1931, pourvoit à la règlementation de la pêche en divisant les eaux en zones de pêche, en changeant les dates des saisons interdites, etc. Cette convention revisée fournit un système de contrôle plus simple et plus adéquat qu'il n'était possible d'exercer auparavant.**

Primes.—*Une loi de 1882 (45 Vict., c. 18), pour le développement des pêcheries maritimes et l'encouragement à la construction des navires de pêche, a consacré une somme annuelle de $150,000, représentant l'intérêt sur le montant de la sentence arbitrale d'Halifax, à la distribution de primes aux pêcheurs et aux propriétaires de bateaux de pêche sur l'Atlantique et à leurs équipages. Une autre loi, votée en 1891 (54-55 Vict., c. 42) éleva ces primes à $160,000, les détails de leur distribution étant réglés chaque année par arrêté ministériel.*

* Une nouvelle convention, semblable en général à celle de 1930 mais comportant plusieurs changements, a été signée à Ottawa le 29 janvier 1937.

INDUSTRIE MODERNE

L'industrie de la pêche commerciale au Canada a commencé à prendre de l'expansion dans la dernière moitié du XIXe siècle. En 1844, la valeur estimative des prises n'était que de $125,000. Elle doubla dans la décade suivante et, dès 1860, elle dépassait $1,000,000. Dix ans plus tard elle atteignait $6,000,000, chiffre plus que doublé en 1878. En 1900 elle avait atteint un total de $21,000,000 et l'augmentation s'est continuée avec peu d'interruption jusqu'en 1918, alors qu'elle toucha la cime de $60,000,000. Depuis lors, il y a eu des diminutions, mais elles sont attribuables à l'abaissement des prix plutôt qu'à une réduction de la prise. En 1936 la valeur s'établit à $39,165,055. Il est entendu que ces chiffres représentent la valeur totale du poisson vendu soit frais, soit séché, soit en conserve ou autrement préparé. Le nombre d'employés a augmenté en même temps en proportion égale. Il s'est élevé à plus de 90,000 certaines années. Le capital engagé s'est élevé d'ailleurs jusqu'à $64,000,000. En 1936 le nombre d'employés est de 86,973 et le capital immobilisé est de $45,831,842.

Entre tous les poissons, la morue de l'Atlantique et le saumon du Pacifique se disputèrent longtemps la primauté mais depuis 1895 le saumon tient définitivement la première place et la quantité de homard et son prix élevé ont plus d'une fois, ces dernières années, relégué la morue au troisième rang. La valeur de la production de la pêche au saumon de 1869 à 1936 est d'environ $462,000,000 et celle de la pêche à la morue, de $290,000,000. Cela a modifié, bien entendu, le rang des provinces entre elles, la Colombie Britannique occupant maintenant la première place qui appartenait auparavant à la Nouvelle-Ecosse.

COMMERCE

La consommation domestique [a] *de poisson est relativement faible au Canada et le commerce dépend largement des marchés étrangers. On peut évaluer approximativement à 60 ou 70 p.c. des prises annuelles la portion exportée, dont les Etats-Unis absorbent environ un tiers et le Royaume-Uni, un quart. L'année civile 1936 les exportations totales s'élèvent à $25,398,102, dont $12,917,592 vont aux Etats-Unis et $5,781,730, au Royaume-Uni. Une autre division révèle que $9,388,184 vont aux pays de l'Empire Britannique et $16,009,918, aux pays étrangers. Le plus important des poissons exportés est le saumon en boîte (expédié au Royaume-Uni et aux marchés européens), suivi par le homard frais, le homard en boîte, le corégone frais, le saumon frais et la morue séchée (aux Antilles et en Amérique du Sud, etc.). Pour le poisson frais, les Etats-Unis constituent le principal débouché.*

(a) Voir le paragraphe intitulé "Aide directe", à la p. 238 pour renseignements sur l'œuvre entreprise par le gouvernement fédéral dans le but d'augmenter la consommation de poisson au Canada.

STATISTIQUES DES PÊCHERIES DU CANADA, 1936

La valeur globale des produits poissonniers du Canada en 1936 est de $39,165,055, comparativement à $34,427,854 en 1935 et $34,022,323 en 1934. Ces chiffres représentent la valeur de tous les produits tels que mis sur le marché, qu'ils aient été vendus pour consommation à l'état frais ou qu'ils aient subi un traitement ou une transformation quelconques dans une usine ou au domicile des pêcheurs. Le tableau qui suit montre les prises et la valeur marchande des principaux poissons commerciaux (dont la pêche a donné une valeur de $100,000 ou plus) les cinq dernières années, avec une indication dans la dernière colonne de l'augmentation ou diminution en 1936 comparativement à 1935.

(a) Pris et débarqué. (b) Valeur des ventes.
(c) Antérieurement à 1934, les totaux concernant le flétan comprenaient les prises débarquées dans des ports de la Colombie Britannique par des vaisseaux des Etats-Unis, alors que depuis 1934 les débarquements américains sont exclus des statistiques, les chiffres se rapportant uniquement aux prises débarquées par des vaisseaux canadiens. Voir renvoi page 138, pour les prises débarquées par des navires américains en 1935.
(d) Comprise avec mactre ou praire antérieurement à 1935.

REVUE DES PÊCHERIES, 1936

En 1936 la prise de poisson, crustacés et mollusques de toutes sortes dans tout le Dominion du Canada s'élève à 1,108,827,900 livres, d'une valeur marchande de $39,165,055. L'année précédente la prise de toutes variétés s'établissait à 953,201,600 livres d'une valeur marchande de $34,427,854. Cette année l'océan a fourni 1,027,485,700 livres ayant une valeur marchande de $32,951,504. Dans les eaux intérieures la prise totale est de 81,342,200 livres et la valeur marchande, de $6,213,551. Tous les districts de pêcheries maritimes montrent des augmentations dans la prise et la valeur, tandis que les deux seules régions intérieures qui laissent voir des diminutions sont le territoire du Yukon et l'intérieur du Québec.

Grande pêche.—La prise du saumon pendant l'année est de 202,970,400 livres, augmentation de 20,549,900 livres, tandis que la valeur marchande de $13,867,513 réflète une augmentation de $1,327,206. Au point de vue de la valeur, le saumon est le principal poisson de commerce au Canada; le homard vient en deuxième lieu et la morue, en troisième. La prise du homard pendant l'année est de 28,327,300 livres ayant une valeur marchande de $4,383,428, ce qui représente une diminution de 3,669,600 livres dans la prise par rapport à la production de 1935, mais une augmentation d'environ $4,600 en valeur. La prise de morue est de 169,997,400 livres ayant une valeur marchande de $3,331,750. La prise et la valeur sont plus grandes qu'en 1935, la première de 16,082,400 livres et la deuxième de $573,610. La prise de corégone dans les eaux intérieures s'établit à 14,460,300 livres et a une valeur marchande de $1,525,700, légère diminution dans la prise mais augmentation en valeur.

Pêcheries maritimes de l'Atlantique

Le tableau suivant donne la prise totale de poissons de mer, de mollusques et crustacés, par province, pendant les deux dernières années:

	1935	1936
	livres	livres
Nouvelle-Ecosse	235,357,700	265,092,200
Nouveau-Brunswick	138,536,900	158,645,000
Ile du Prince-Edouard	20,891,800	24,813,800
Québec	80,682,900	89,259,400
Prises totales	475,469,300	537,810,400

Morue, églefin, merluche et brosmius, et merlan.—Les prises totales de ces variétés pendant l'année s'élèvent à 244,925,300 livres ayant une valeur marchande de $5,028,060. L'année précédente la prise a été de 216,268,900 livres et la valeur marchande, de $4,135,460. La prise de morue est plus considérable que celles des autres variétés combinées: elle s'établit à 169,187,500 livres, soit une augmentation de 16,941,600 livres. Les prises de chacune des autres variétés sont beaucoup plus considérables qu'en 1935, elles sont les suivantes: églefin, 40,301,000 livres; merluche et brosmius, 22,802,300 livres; et merlan, 12,634,500 livres. Les plus grandes quantités de morue et d'églefin sont capturées par les pêcheurs de la Nouvelle-Ecosse. Québec, la deuxième des provinces productrices de morue, a eu l'an dernier une prise d'environ 42,000,000 livres, comparativement à 108,000,000 livres pour la Nouvelle-Ecosse. La prise d'églefin en Nouvelle-Ecosse s'élève à 39,184,800 livres, augmentation de 3,500,000 livres. Le Nouveau-Brunswick laisse voir une légère augmentation dans la prise de merluche et de brosmius s'élevant à 6,080,300 livres, tandis que la prise de merlan s'y établit à 5,113,500 livres. La prise de merlan en Nouvelle-Ecosse, 7,521,000 livres, représente une augmentation de 50 p.c. Le merlan ne se capture pas dans les eaux autres que celles de l'Ile du Prince-Edouard et du Québec.

Une autre diminution se manifeste cette année dans la production de poisson séché, malgré l'augmentation dans la prise globale de morue, d'églefin, de merluche et brosmius, et de merlan, espèces employées dans le commerce du poisson séché. Le production de poisson séché (à l'exclusion du poisson désossé) s'approprie un peu moins de 70,500,000 livres de la prise totale, contre 86,869,000 livres environ en 1935, et comme il faut environ 300 livres de poisson frais pour produire 100 livres de poisson séché la mise en boîte de ce dernier produit en 1936 n'est que de 23,496,000 livres, en chiffres ronds, contre 28,956,000 livres l'année précédente. Il y a une vive augmentation dans le nombre de livres dirigé vers le commerce du poisson frais. Pour tout dire, la quantité de morue, d'églefin, de merluche et brosmius et de merlan employés à l'état frais pendant l'année, y compris la quantité mise sur le marché sous forme de filets frais, est de 78,322,000 livres, en chiffres ronds; tandis qu'en 1935 elle était légèrement supérieure à 54,838,000 livres. Les pourcentages des prises de poissons employés frais et employés pour la production de poisson séché, respectivement, pour les deux années sont les suivants: Employé frais—1936, 32 p.c.; 1935, 25 p.c.; employé pour la production de poisson séché—1936, 29 p.c.; 1935, 41 p.c. La morue constitue l'item le plus important du poisson séché et la Nouvelle-Ecosse est la plus grande productrice. La quantité de morue séchée en Nouvelle-Ecosse pendant l'année diminue de plus d'un million de livres à 11,712,600 livres. Dans le Québec, deuxième au point de vue production, 5,820,900 livres seulement ont été mises en boîte, diminution de plus de 2,000,000 de livres sur l'année précédente. La production totale de merlan séché sur la côte augmente de plus d'un million de livres, atteignant 3,115,800 livres. Tandis que la production de merluche séchée diminue dans l'ensemble, il y a un gain dans l'Ile du Prince-Edouard; mais le rendement de l'île n'est pas considérable, il est légèrement inférieur à 189,000 livres.

Hareng, maquereau et sardine.—Les rapports indiquent une augmentation dans la prise de ces trois espèces, celle du hareng qui est de 118,083,700 livres montre le plus fort gain, soit 16,350,000 livres. La prise de maquereau passe à 22,763,800 livres, augmentation de 6,710,000 livres. Le hareng et le maquereau sont capturés dans chacune des provinces de l'Atlantique; le Nouveau-Brunswick détient la prise la plus considérable de hareng en 1936, soit 52,162,000 livres, et la Nouvelle-Ecosse, la prise la plus forte de maquereau, soit 19,061,600 livres. Les prises de hareng sont plus considérables dans chaque province, tandis que la prise de maquereau est plus grande partout, excepté dans le Québec où la prise, 1,616,400 livres, est la moitié moindre que celle de 1935. La sardine se pêche dans le Nouveau-Brunswick et le Québec, mais c'est sur les rivages de la baie de Fundy que se font au moyen de nasses les plus grandes prises. La quantité prise en cet endroit en 1936 est de 49,273,600 livres, augmentation de 11,773,800 livres. La majeure partie de la prise est mise en boîte dans la région où elle se fait ou vendue aux conserveries de l'autre côté de la frontière dans le Maine. La mise en boîte cette année dans le Nouveau-Brunswick, 393,854 caisses, a été en majeure partie destinée à l'exportation, la sardine canadienne étant en grande demande dans les nombreux pays britanniques d'outre-mer ainsi que sur les autres marchés de l'étranger. La valeur marchande de la prise de sardine est de $1,597,192, tandis que la valeur marchande des trois variétés réunies, sardines, maquereau et hareng, s'élève à $3,250,915, augmentation de $490,287.

Turbot, flétan et espadon.—Les prises de turbot et de flétan accusent une augmentation, mais la prise d'espadon a diminué. Le turbot est capturé dans les eaux de chacune des provinces de l'Atlantique; le flétan, dans toutes, excepté dans les régions de l'Ile du Prince-Edouard; et l'espadon, au large de la Nouvelle-Ecosse seulement. La prise de turbot est de 874,500 livres dont la majeure partie, 661,600 livres, est attribuée à la Nouvelle-Ecosse. Des 3,255,000 livres, constituant la prise totale de flétan, 3,104,400 livres sont créditées à la Nouvelle-Ecosse. Ce dernier chiffre représente une augmentation de 200,000 livres. La valeur marchande du flétan est de $401,431, tandis que celle des 1,785,300 livres l'espadon est de $230,798.

Saumon et autres poissons frayant dans les rivières.—La prise de saumon, 3,193,100 livres, est légèrement inférieure à celle de l'année précédente qui a été de 3,270,500 livres. Le Nouveau-Brunswick, où 1,657,400 livres ont été prises, est la seule province qui laisse voir une augmentation de la prise, bien que celle de la Nouvelle-Ecosse, 601,900 livres, n'est que de 11,000 livres plus faible que l'année précédente. Dans le Québec la prise est de 931,700 livres, contre 1,053,600 livres; dans l'Ile du Prince-Edouard elle s'élève à 2,100 livres. La valeur marchande totale du saumon pris sur la côte est de $442,496, contre $406,246 en 1935. (Dans le Nouveau-Brunswick et le Québec la pêche au saumon se fait sur un plan commercial aussi bien dans les pêcheries intérieures que dans les pêcheries maritimes; mais, naturellement, les résultats de la pêche à l'intérieur n'entrent pas en ligne de compte dans ces paragraphes.) L'éperlan et le gasparot accusent une augmentation de la prise particulièrement le premier, et chaque province rapporte augmentation dans la prise d'éperlan. Dans le Nouveau-Brunswick il y a une forte augmentation de la prise d'éperlan, mais dans la Nouvelle-Ecosse et l'Ile du Prince-Edouard il y a diminution. Le gasparot n'est pas capturé dans le Québec. La prise d'éperlan, 9,300,700 livres, a une valeur marchande de $640,222, tandis qu'en 1935 elle était de 7,729,900 livres d'une valeur marchande de $570,745. Les prises d'éperlan, par province, sont les suivantes: Nouvelle-Ecosse, 768,000 livres; Nouveau-Brunswick, 6,387,500 livres; Ile du Prince-Edouard, 1,184,300 livres; Québec, 960,900 livres. La prise dans le Nouveau-Brunswick représente une augmentation de plus d'un million de livres. La majeure partie de la prise de gasparot s'est faite dans le Nouveau-Brunswick où 6,112,200 livres ont été prises sur un total de 8,817,300 livres. Dans la Nouvelle-Ecosse la prise est de 2,670,700 livres et dans l'Ile du Prince-Edouard, de 34,400 livres. Dans le Nouveau-Brunswick la prise représente une augmentation de 1,298,300 livres. La valeur marchande de la prise dans les trois provinces est de $92,654, légère diminution sur l'année précédente.

Homard.—La prise de homard sur la côte est de 28,327,300 livres ayant une valeur marchande de $4,383,428. Malgré une diminution de la prise, la valeur accuse une augmentation attribuable au prix plus élevé du homard frais et en boîte. La prise dans le Nouveau-Brunswick est la seule qui laisse voir une augmentation, dans les autres provinces il y a diminution. La diminution de la prise est la plus considérable dans la Nouvelle-Ecosse où il y a une baisse de 3,174,500 livres.

Autres mollusques et crustacés.—Outre le homard, les pêcheurs de la côte de de l'Atlantique capturent le pétoncle, la coque, l'huître, la littorine et le crabe, mais seules les trois premières variétés ont une grande valeur commerciale. La pêche du pétoncle s'est beaucoup développée en ces deux ou trois dernières années, particulièrement dans la région de la baie de Fundy au large de Digby, Nouvelle-Ecosse, où bon nombre de vaisseaux sont occupés aux opérations de chalutage pendant la saison de pêche. La production totale de pétoncle pendant l'année est de 170,672 gallons (sans coquille) ayant une valeur marchande de $334,424, augmentations de 37,537 gallons et de $126,783. De ce total 163,305 gallons sont produits par la Nouvelle-Ecosse et ont une valeur marchande de $322,537. Le Nouveau-Brunswick a également pris 7,305 gallons de pétoncle et le Québec, 152 gallons. La pêche aux huîtres se fait dans les eaux de la Nouvelle-Ecosse, du Nouveau-Brunswick et de l'Ile du Prince-Edouard. La prise de 9,109 barils dans le Nouveau-Brunswick est la plus considérable en 1936, elle accuse une augmentation de 738 barils. L'Ile du Prince-Edouard, avec 6,742 barils, laisse voir une diminution de 3,272 barils et la Nouvelle-Ecosse, avec 4,919 barils, accuse une diminution de 456 barils. La valeur marchande de la récolte totale d'huîtres sur la côte est de $130,235, légère diminution sur l'année précédente. La prise de coques s'élève à 45,914 barils et celle de praires, à 2,351 barils. La majeure partie des coques sont récoltés dans le comté de Charlotte, Nouveau-Brunswick, et le total de l'année pour cette province est de 31,231 barils. La

Nouvelle-Ecosse vient en deuxième place avec 10,480 barils. Le Québec a produit 2,289 barils et l'Ile du Prince-Edouard, 1,914 barils. Les récoltes du Nouveau-Brunswick et de l'Ile du Prince-Edouard sont plus considérables qu'en 1935, tandis que les autres provinces enregistrent des diminutions.

Pêcheries du littoral du Pacifique

La prise de toutes les espèces de poisson sur le littoral du Pacifique s'établit à 489,675,300 livres et la valeur marchande s'élève à $17,231,534, contre 404,178,800 livres d'une valeur marchande de $15,169,529 en 1935. L'augmentation de la prise et de la valeur marchande du saumon et du hareng est la cause principale de l'amélioration de cette année, bien que les rapports de bon nombre des autres pêcheries concourent à grossir le total avec des prises et une valeur marchande plus considérables.

Saumon.—La prise est de 199,549,900 livres et la valeur marchande, de $13,387,344, contre 178,943,100 livres ayant une valeur marchande de $12,099,275 l'année précédente. La mise en boîte de 1,881,025 caisses accuse une augmentation de 352,003 caisses et la valeur de $11,128,636, une augmentation de $1,474,739. Les variétés qui ont surtout contribué à cette augmentation dans la mise en boîte sont le saumon bécard, le saumon rose et le sockeye. La mise en boîte du saumon bécard, 597,487 caisses, est la plus considérable depuis 1928, tandis que celle du saumon rose, 591,532 caisses, est la plus considérable depuis 1930. La mise en boîte du sockeye est de 415,024 caisses, la plus considérable depuis 1930, augmentation de 64,580 caisses sur la production de 1935. Il y a une baisse dans la quantité de saumon employé à l'état frais et peu salé, mais la quantité de saumon salé à sec est légèrement plus considérable. La production d'huile de saumon, 171,326 gallons, est le triple de celle de l'année précédente et la valeur est de $38,717, soit plus du triple de celle de l'an dernier. La production de poudre faite des déchets de saumon s'établit à 2,083 tonnes comparativement à 806 tonnes, et la valeur marchande de $66,701 accuse une augmentation correspondante.

Hareng.—Une des trois plus importantes variétés de poisson sur cette côte est le hareng dont la prise s'élevant à 162,062,500 livres est de 61,211,800 livres plus considérable que celle de l'année précédente. La valeur marchande, $1,142,397, double celle de 1935. Bien que la mise en boîte de hareng salé à sec ait été pendant des années l'item principal du commerce de ce poisson, on s'est surtout intéressé à la production de poudre et d'huile. La production de poudre, 10,085 tonnes, est presque le double de celle de l'an dernier et la production d'huile, 782,499 g llons, plus que le double. Les valeurs marchandes des deux produits sont de $349,910 et de $200,422 respectivement, la première est une augmentation de 138 p.c. et la dernière, de 191 p.c. Le hareng salé à sec s'établit à 38,333,700 livres, contre 30,271,000 livres. La mise en boîte de 51,695 caisses de hareng constitue le fait saillant de l'industrie. C'est la plus considérable mise en boîte depuis 1919 alors qu'elle était de 64,000 caisses.

Flétan.—Les pêcheurs canadiens ont pris 10,591,800 livres de flétan, un peu moins qu'en 1935 alors que la prise s'est élevée à 10,192,700 livres. La valeur marchande, $1,039,879, accuse une augmentation de $99,017. La vente de foies de flétan s'élève à 191,600 livres valant $96,311, ces deux totaux étant légèrement supérieurs à ceux de l'année précédente. Outre les prises venant de vaisseaux canadiens, les pêcheurs américains ont débarqué 6,220,300 livres de flétan en Colombie Britannique, particulièrement à Prince-Rupert, et les ont expédiées en régie aux marchés des Etats-Unis.

Pilchard.—Pour ce qui est du pilchard, la prise et la valeur accusent une baisse, la première s'établit à 88,903,700 livres et la deuxième, à $667,313. Bien que ce poisson soit surtout employé à la production de poudre et d'huile, la mise en boîte est de 35,007 caisses ayant une valeur marchande de $102,127. La quantité de poudre est légèrement supérieure à celle de 1935 et les 8,715 tonnes ont une valeur de $274,063. Il y a diminution dans la quantité d'huile extraite, 1,217,097 gallons, d'une valeur marchande de $290,216.

Autres pêcheries.—La lingue suit en importance le saumon, le flétan, le hareng et le pilchard, en 1936 il y a augmentation dans la prise et la valeur. La prise est de 6,893,200 livres et la valeur marchande, de $392,147. On a pris 370 baleines, ce qui surpasse un peu le chiffre de 1935, et la valeur des produits de la baleine, poudre, engrais et huile, s'établit à $172,201. Le poisson gris ou roussette se pêchent pour fin de réduction et la valeur de l'huile et de la poudre produites l'an dernier, $69,719, a été presque le double de celle de l'année précédente. La valeur des coques, des crabes et des huîtres amenés au rivage accuse une augmentation sur l'année précédente, mais la quantité et la valeur des crevettes diminuent de plus de la moitié. Le nombre de phoques à fourrure pris par les Indiens, en vertu du traité de la pêche pélagique, est de 1,888, contre 841 l'année précédente.

Pêcheries intérieures

Les rapports sur les rivières intérieures et les lacs du Canada, y compris ceux du Nouveau-Brunswick et du Québec, (les résultats des pêcheries maritimes dans ces provinces sont mentionnés ailleurs dans cette revue) indiquent que les pêcheurs commerçants ont pris 81,342,200 livres de poisson en 1936, contre 73,553,500 livres l'année précédente. La valeur marchande de la prise de l'année atteint $6,213,551, contre $5,252,454.

Le corégone est l'espèce la plus précieuse prise dans les eaux intérieures et la prise de 1936 a une valeur marchande de $1,525,700. La production de l'Ontario compte pour plus de la moitié de la valeur totale, soit $810,642, bien que la prise dans cette province soit inférieure à la moitié du total pour le Dominion. La Saskatchewan, avec une prise valant $251,012, occupe la deuxième place en autant que la valeur du corégone est concernée. Au Manitoba, d'autre part, la prise des 2,127,500 livres n'est que 56 p.c. de celle de l'an dernier. La prise et la valeur du corégone dans le Québec sont pour ainsi dire les mêmes qu'en 1935.

La prise de doré, 14,563,500 livres, a une valeur de $1,109,397, soit la deuxième au point de vue valeur des poissons d'eau douce. La prise et la valeur marchande accusent une augmentation: la première, de 3,608,700 livres et la deuxième, de $307,575. Le Manitoba a produit la plus grande quantité de doré: les prises dans cette province sont de 10,505,400 livres, augmentation de 3,287,100 livres. La sandre, prise dans la province d'Ontario seulement, accuse une augmentation de la prise qui s'élève à 6,899,500 livres et de la valeur marchande, à $614,055.

La truite, autre poisson d'eau douce très important, a aussi été prise en quantités plus considérables que l'année précédente, la prise s'établit à 7,297,300 livres ayant une valeur marchande de $842,738. Le premier chiffre laisse voir une augmentation de 664,800 livres et le deuxième, une augmentation de $74,170. La majeure partie de la truite, 6,458,700 livres, a été prise dans l'Ontario.

La prise d'anguille dans l'intérieur du Québec est légèrement inférieure à celle de l'an dernier. La prise s'établit à environ 2,139,000 livres ayant une valeur marchande de $140,139. La plus grande partie de la production d'anguille au Canada vient des eaux douces du Québec.

L'aperçu donné ci-dessus sur les pêcheries canadiennes pour l'année 1936 est dû à la bienveillante collaboration du sous-ministre des Pêcheries, qui l'a fait préparer par son personnel.

RÉSUMÉ DE LA PRODUCTION, 1936

Le tableau ci-dessous indique, pour l'ensemble du Canada, tout le poisson pris et mis sur le marché au cours de l'année 1936; les chiffres de 1935 paraissant en regard. Pour chaque espèce, la quantité prise et sa valeur au débarquement sont d'abord données. Viennent ensuite des détails sur la forme sous laquelle chaque espèce a été mise sur le marché, ainsi que la valeur.

2. Quantité et valeur de tout le poisson pêché et mis en vente au Canada, durant les années 1935 et 1936

Espèce		Pêcheries maritimes			
		1935		1936	
		Quantité	Valeur	Quantité	Valeur
			$		$
Morue, prise	qtx	**1,539,150**	**1,856,530**	**1,699,974**	**2,170,446**

Agences de production

OPÉRATIONS PRIMAIRES

Capital.—La valeur du capital représenté par les navires, bateaux, filets et sennes, et autre matériel de pêche utilisés dans les opérations primaires de la prise et du débarquement du poisson, en 1936, est de $27,217,250, dont $22,543,681 pour les pêcheries maritimes et $4,673,569 pour les pêcheries d'eau douce. Le montant total accuse une augmentation de $744,168 sur 1935 et de $1,004,547 sur 1934. Les pêcheries maritimes et les pêcheries d'eau douce se partagent cette augmentation.

Personnel.—Il y a 58,371 pêcheurs employés dans les pêcheries maritimes au cours de l'année et 13,364 dans les pêcheries d'eau douce, formant un total de 71,735, contre un total de 68,557 l'année 1935. Le plus grand nombre est employé à la pêche sur bateaux; la répartition du total est la suivante: pêcheurs sur navires, 5,158; sur bateaux, 59,039; sur la grève et à travers la glace, 7,538.

CONSERVERIES ET SAURISSERIES

Capital.—Le capital placé dans les conserveries et les saurisseries en 1936 est de $18,614,592, réparti comme il suit: terrains, bâtiments et machineries, $9,648,981; matières premières et produits en mains, marchandises en voie de fabrication, etc., $6,286,569; argent en caisse, comptes courants et billets à recevoir, $2,679,042. Le total des immobilisations montre une augmentation de $1,469,786 sur l'année précédente.

Personnel.—Les chiffres de l'emploiement dans les établissements donne un total de 15,238 personnes en 1936, comparativement à 14,361 l'année précédente.

Les tableaux 3 à 6 qui suivent montrent en résumé le capital-outillage et les employés pour l'ensemble du Canada; d'autres tableaux de l'introduction présentent les statistiques par province, tandis que les statistiques par comté et sous-district de pêche paraissent dans les tableaux d'ensemble du présent rapport.

Détails sur les conserveries et les saurisseries

Nombre d'établissements.—En 1936 il y a au Canada 624 conserveries et saurisseries qui se divisent comme il suit: 304 homarderies, 68 saumoneries, 17 conserveries de crustacés et mollusques, 15 sardineries et conserveries d'autres poissons, 188 saurisseries, 15 glacières et 17 huileries. L'industrie de la conserverie et du saurissage appartient complètement aux pêcheries maritimes; les établissements sont construits le long de la côte, dans les baies et les estuaires, à des endroits où les pêcheurs peuvent commodément délivrer leurs prises. En 1936 la distribution des établissements par province est la suivante: Ile du Prince-Edouard, 93; Nouvelle-Ecosse, 172; Nouveau-Brunswick, 129; Québec, 139; et Colombie Britannique, 91. Bien que la Colombie Britannique ait le plus petit nombre d'établissements, ils sont presque tous de grande capacité et la valeur réunie de leur production représente 61 p.c. de la production totale des conserveries et des saurisseries du Dominion.

Personnel, salaires et gages.—Le personnel des établissements est de 15,238; ce total comprend 558 employés salariés, 10,073 employés à gages et 4,607 ouvriers à l'entreprise ou à la pièce. Les employés de la dernière catégorie se trouvent surtout dans les saumoneries de la Colombie Britannique où une grande partie du travail se fait à l'entreprise; l'entrepreneur embauche et paie ses propres employés et est lui-même rémunéré par l'exploitant de la conserverie selon la quantité du produit. Environ 75 p.c. des ouvriers des conserveries de la Colombie Britannique entrent dans cette classification.

Les statistiques du nombre total d'employés des établissements sont basées sur l'emploiement mensuel moyen de travailleurs à gages et sur le nombre total de salariés, d'ouvriers à l'entreprise et de travailleurs à la pièce pour l'entière saison, la méthode de calcul étant comme il suit: sur le rapport de chaque établissement est faite l'addition du nombre de travailleurs à gages indiqués pour chaque mois, et le total ainsi obtenu est divisé par le nombre de mois pendant lesquels l'établissement a été en exploitation durant l'année. Par exemple, une homarderie emploie 12 personnes en mai, 14 en juin, 12 en juillet et 10 en août, en tout 48. On divise ce total par le nombre de mois d'exploitation, c'est-à-dire 4, ce qui donne 12 comme nombre d'ouvriers à gages de l'établissement. A ce nombre on ajoute celui des salariés et celui des ouvriers à l'entreprise et à la pièce, dont l'emploiement est sur une base annuelle ou saisonnière et non mensuelle. Le chiffre définitivement obtenu sera le nombre d'employés attribué à l'établissement en question pour l'année, et le calcul de ces totaux fournit le nombre d'employés dans toute l'industrie. La période d'emploiement varie selon la longueur de la saison des opérations: les homarderies sont exploitées pendant une période allant d'un mois à trois mois, et les saumoneries pendant des périodes plus longues, alors que plusieurs des saurisseries restent en exploitation toute l'année. En outre, dans quelques-unes des conserveries, le saurissage s'effectue avant et après l'époque consacrée à la mise en conserve. Les fluctuations de l'emploiement sont indiquées par les statistiques du nombre de travailleurs à gages employés chaque mois. Il est impossible d'établir des statistiques mensuelles pour les ouvriers à la pièce; en effet, à cause du système d'embauchage de ces ouvriers par l'intermédiaire d'un entrepreneur, l'exploitant d'une conserverie ne tient pas compte du nombre qui y sont employés chaque mois et il lui est donc impossible d'inclure dans son rapport d'autres détails que le nombre moyen d'ouvriers pour la saison ainsi que la somme payée pour leur travail. Il faut noter, en outre, que dans cette industrie, surtout celle des homarderies, il y a beaucoup d'employés à temps partiel; car le travail dépend grandement du volume des livraisons quotidiennes de poisson aux conserveries. Quand une quantité considérable arrive, il faut des employés supplémentaires pour les opérations de conserverie et un nombre additionnel de personnes, dont plusieurs femmes, sont employées pendant deux ou trois jours de la semaine. Dans les tableaux il n'y a pas de distinction entre les employés à temps entier et à temps partiel.

La somme totale payée à tous les employés pendant l'année est de $4,003,850, répartie comme il suit: $734,678 aux employés salariés, $2,544,903 aux employés à gages et $724,269 aux ouvriers à l'entreprise et à la pièce.

Le tableau ci-dessous donne le nombre d'employés que comprend chacune des catégories et les salaires et gages payés à ces derniers.

7. Personnel des conserveries et saurisseries en 1934, 1935 et 1936—nombre d'employés, salaires et gages

Année	Salariés		Employés à gages		Ouvriers à l'entreprise et à la pièce		Nombre total d'employés, salaires et gages	
	nomb.	$	nomb.	$	nomb.	$	nomb.	$
1934	548	676,124	9,642	2,193,995	4,612	684,956	14,802	3,555,075
1935	550	703,075	9,468	2,171,478	4,343	679,395	14,361	3,553,948
1936	558	734,678	10,073	2,544,903	4,607	724,269	15,238	4,003,850

Employés à gages par mois.—Les statistiques de l'emploiement par mois ne sont disponibles que pour les employés à gages; pour les autres classifications les rapports donnent le nombre total pour l'année. Les mois où l'emploiement est le plus considérable pour les employés à gages sont mai et juin: le premier donne un total de 9,041 et le dernier, 9,152. Les mois où l'emploiement est le plus faible sont janvier (1,557) et février (1,553). Les mois de mai, juin et juillet constituent la période de grande activité pour les homarderies; dans les saumoneries elle s'étend de mai à août. Dans les autres branches de l'industrie de la conserverie et du saurissage l'emploiement est à peu près constant toute l'année. Le total des employés à gages inscrits chaque mois divisé par 12 donne un nombre moyen de 4,544 pour 1936, contre une moyenne de 4,065 en 1935.

Le tableau suivant donne les statistiques de l'emploiement mensuel des employés à gages.

8. Travailleurs à gages dans les conserveries et les saurisseries inscrits sur la liste de paie le 15 de chaque mois, 1934, 1935 et 1936 (a)

(a) A l'exclusion des travailleurs à l'entreprise et à la pièce.

Sommes hebdomadaires versées aux divers groupes d'employés à gages.—Le recensement annuel de l'industrie comprend une enquête spéciale sur les montants versés aux travailleurs manuels pendant toute semaine du mois où l'emploi a été le plus considérable. Le tableau ci-dessous donne le résultat de la compilation des rapports pour les années 1935 et 1936. L'enquête, il faut se la rappeler, porte sur les sommes payées pendant la semaine et non sur le taux des salaires hebdomadaires. Le plus grand nombre d'ouvriers pour les deux années sont compris dans le groupe de ceux qui reçoivent moins de $6 par semaine, mais il est probable que la plupart de ceux-là sont des ouvriers à temps partiel.

9. Sommes hebdomadaires versées aux divers groupes d'employés à gages: Sommes payées aux ouvriers des conserveries et des saurisseries pour le travail d'une semaine du mois pendant lequel l'emploi a été le plus élevé, 1935 et 1936 (a)

(a) A l'exclusion des travailleurs à l'entreprise et à la pièce.

Matières premières.—Le prix d'achat de toutes les matières premières employées pendant l'année est de $16,459,938; cette somme comprend $11,916,080 pour le poisson employé, $3,672,437 pour les récipients et $871,421 pour les huiles comestibles, le sel et les diverses autres matières premières. La valeur totale accuse une augmentation de $1,687,216 sur l'année précédente. Les livraisons de poisson aux établissements en 1936 se totalisent à 7,786,296 qtx, soit 76 p.c. de la prise totale de poisson de mer pendant l'année. La quantité vendue directement par les pêcheurs pour être consommée soit à l'état frais, soit en conserves domestiques constitue les autres 24 p.c. de la prise.

Le tableau suivant donne la quantité et la valeur du poisson et des autres matières premières, employés de 1934 à 1936.

10. Quantité et valeur des matières premières utilisées dans les conserveries et les saurisseries, 1934, 1935 et 1936

Matières premières	1934		1935		1936	
	Quantité	Valeur	Quantité	Valeur	Quantité	Valeur
Poisson qtx	5,612,561	11,638,820	6,237,719	10,958,895	7,786,296	11,916,080

Total	–	**15,567,160**	–	**14,772,722**	–	**16,459,938**

(a) Ne paraît pas séparément avant 1936.

Production.—En 1936 la valeur de production des conserveries et des saurisseries est de $26,684,801, dont $20,254,627 vont au poisson mis en conserve, sauré, etc. et $6,430,174, au poisson vendu pour consommation à l'état frais. Les saumoneries sont très importantes au point de vue de la production totale: cette branche de l'industrie montre une valeur de $12,966,038 ou 49 p.c. de la production totale de tous les établissements. Par ordre de valeur viennent ensuite les saurisseries avec $6,676,709 ou 25 p.c. de l'ensemble; les homarderies avec $3,351,706 ou 12 p.c.; les sardineries, $2,031,900 ou 8 p.c.; les huileries, $980,072 ou 4 p.c.; et les établissements frigorifiques, $587,292 ou 2 p.c. La production des conserveries de coques s'établit à $91,084, soit moins d'une demie de 1 p.c. de l'ensemble. Par province, les valeurs de production sont les suivantes:

Colombie Britannique, $16,364,712, soit 61 p.c. du total pour le Canada; Nouvelle-Ecosse, $6,164,488, soit 23 p.c.; Nouveau-Brunswick, $2,768,926, soit 10 p.c.; Québec, $706,392, soit 3 p.c.; Ile du Prince-Edouard, $680,283, soit 3 p.c. La valeur de la production des établissements représente 81 p.c. de la valeur marchande totale des pêcheries en 1936, tandis que les 19 p.c. qui restent représentent la valeur du poisson vendu directement par les pêcheurs pour être consommé soit à l'état frais, soit en conserves domestiques.

Le tableau classifie les établissements et montre la valeur totale de la production pour chacun de 1934 à 1936.

11. Valeur de la production des conserveries et des saurisseries, 1934, 1935 et 1936

Tableaux d'ensemble.—Une section des tableaux d'ensemble du présent rapport est consacrée aux statistiques des conserveries et des saurisseries; on y trouve, par province et par comté ou district, des détails sur le capital, les employés, les salaires et gages, la valeur de la production et les autres aspects de l'industrie qui ont fait l'objet d'un résumé succinct dans les paragraphes précédents.

Les pêcheries dans les différentes provinces

Les tableaux ci-dessous (12-18) montrent, par province: la valeur totale des pêcheries; la quantité prise et débarquée et la valeur marchande des principaux poissons du commerce; la quantité et la valeur de tout le poisson pris, débarqué et mis sur le marché; les valeurs totales, par comté ou district, du poisson de mer pris, débarqué et mis sur le marché; la quantité de poisson de mer produite par les pêcheries côtières; le capital-outillage; le personnel.

12. Valeur des pêcheries, par province, de 1932 à 1936, par ordre d'importance en 1936

(a) Quantité prise. (b) Valeur des ventes.
(c) Antérieurement à 1934, les totaux concernant le flétan comprenaient les prises débarquées dans des ports de la Colombie Britannique par des vaisseaux des Etats-Unis, alors que depuis 1934 les débarquements américains sont exclus des statistiques, les chiffres se rapportant uniquement aux prises débarquées par des vaisseaux canadiens. Voir renvoi page 138 pour les prises débarquées par des navires américains en 1936.

Primes

En vertu d'une "Loi pour encourager le développement des pêcheries maritimes et la construction des navires de pêche," une somme de $160,000 est donnée en primes chaque année par le Gouverneur en conseil. Sous le nom de primes de pêche elles sont distribuées par le ministère des Pêcheries parmi les pêcheurs et les propriétaires de navires et de barques de pêche du littoral de l'Atlantique selon les règlements édictés de temps à autre par le Gouverneur en conseil.

En 1936, les versements ont été effectués sur la base suivante:

Aux propriétaires de navires de pêche ayant droit à cette prime, $1 par tonne enregistrée; avec un maximum de $80 par navire.

A chaque membre de l'équipage ayant droit à la prime, $6.60.

Aux propriétaires de barques mesurant au moins 12 pieds de quille, $1 par embarcation.

A chaque pêcheur d'une barque ayant droit à une prime, $5.70.

Le montant payé en 1936 est de $159,977.75, réparti comme il suit:

A 529 propriétaires de navires et leurs équipages.....$ 31,633.60
A 11,764 barques et leurs équipages.....$128,344.15

Commerce extérieur

Exportations.—Les exportations de poisson et de produits des pêcheries ont diminué considérablement au cours de la dépression; mais un regain a commencé en 1933 et le commerce, depuis lors, a montré une avance constante. En 1936 la valeur totale des exportations est de $25,398,102, augmentation de $538,616 ou 2 p.c. sur l'année précédente et de $6,645,995 ou 35 p.c. sur 1932, creux de la période de dépression. Le principal item à tous les ans est le saumon en boîte et en 1936 la valeur des exportations de ce produit est de $6,367,323. Les autres principaux item, par ordre de valeur en 1936, sont le homard en carapace ($2,100,762); le homard en boîte ($2,080,005); le corégone frais ($1,458,827); le saumon frais ($1,455,878) et la morue séchée ($1,074,572). En 1936 le Canada a exporté dans 85 pays du poisson d'une sorte ou d'une autre. Le Royaume-Uni en a acheté pour une valeur de $5,781,730, soit 23 p.c. des exportations totales; tandis que les Etats-Unis en ont reçu pour $12,917,592 ou 51 p.c. Les exportations en Australie s'évaluent à $1,668,594.

Importations.—Les importations canadiennes de poisson et des produits de la pêche, pour la consommation, ont une valeur totale de $2,918,251 en 1936, en regard de $2,597,856 en 1935 et de $2,122,748 en 1934. Parmi les principaux item il y a la sardine de Norvège, les huîtres et le thon en boîte des Etats-Unis, les crabes ou les coques des Etats-Unis et du Japon. Sont également considérables les importations d'huile de poisson, surtout l'huile de foie de morue et l'huile de baleine.

Revue rétrospective

Les cinq tableaux suivants présentent une revue rétrospective de l'industrie de la pêche au Canada pendant les années passées. En ce qui concerne la production, les données sont établies par province et par année et remontent jusqu'à 1870. Quant au nombre et à la valeur des navires, barques, etc., les chiffres partent de l'année 1880; le personnel qu'emploie cette industrie est révélé depuis 1895.

19. Revue rétrospective—(a) Valeur totale des pêcheries dans les différentes provinces du Canada pour les années 1870 et 1875 jusqu'à 1936 inclusivement

NOTA.—De 1895 à 1906 l'exercice budgétaire se terminait le 30 juin; de 1908 à 1917(a) le 31 mars; depuis 1917(b) il s'agit des années civiles. Les chiffres manquent pour les neuf mois finissant le 31 mars 1907.

20. Tableau de conversion de la pesée du poisson

Dans ce tableau, dans le cas de la morue, de l'églefin, de la merluche et du brosmius, du merlan et du flétan (littoral de l'Atlantique) on entend par poisson frais le poisson dont on a enlevé les entrailles et non la tête. Le poids du flétan sur la côte du Pacifique est pris après l'enlèvement de la tête et des entrailles. Dans le cas de l'espadon et du thon le poids comprend le poisson après l'enlèvement de la tête, de la queue et des entrailles. Pour tous les autres poissons le terme "poisson frais" signifie le poisson tel qu'il est sorti de l'eau.

MORUE, ÉGLEFIN, MERLUCHE ET BROSMIUS OU MERLAN

300 lb de poisson frais donnent 1 qtl de filets frais.
160 lb de poisson frais donnent une caisse de poisson en boîte.
200 lb de poisson frais donnent 1 qtl de poisson salé vert.
200 lb de poisson frais donnent 1 qtl de poisson saumuré.
300 lb de poisson frais donnent 1 qtl de filets fumés.
200 lb de poisson frais donnent 1 qtl de poisson fumé.
300 lb de poisson frais donnent 1 qtl de poisson séché.
400 lb de poisson frais donnent 1 qtl de poisson désossé.

HARENG

70 lb de hareng frais donnent une caisse de hareng en boîte.
200 lb de poisson frais donnent 1 qtl de hareng fumé.
300 lb de poisson frais donnent un baril de hareng saumuré.
200 lb de poisson frais donnent un baril de boëtte (fraîche ou salée).
200 lb de poisson frais donnent un baril d'engrais.
125 lb de poisson frais donnent 1 qtl de hareng salé à sec.

MAQUEREAU OU ALOSE

70 lb de poisson frais donnent une caisse de poisson en boîte.
300 lb de poisson frais donnent un baril de poisson saumuré.
400 lb de poisson frais donnent un baril de filets de maquereau salés.

SARDINE

Un baril de poisson frais donne $4\frac{1}{4}$ caisses de poisson en boîte.
Une caisse de 25 livres équivaut à 100 boîtes de $\frac{1}{4}$ de lb chacune.

PILCHARD

70 lb de poisson frais donnent une caisse de poisson en boîte.
200 lb de poisson frais donnent un baril de boëtte.

GASPAROT

200 lb de poisson frais donnent 1 qtl de poisson fumé.
275 lb de poisson frais donnent un baril de poisson saumuré.

SAUMON

84 lb de poisson frais (Pacifique) donnent une caisse de 48 lb de poisson en boîte.
70 lb de poisson frais (Atlantique) donnent une caisse de 48 lb de poisson en boîte.
170 lb de poisson frais donnent 1 qtl de poisson fumé.
125 lb de poisson frais donnent 1 qtl de poisson salé à sec.
150 lb de poisson frais donnent 1 qtl de poisson fumé doux.
150 lb de poisson frais donnent 1 qtl de poisson saumuré.

THON

100 lb de poisson frais donnent une caisse de poisson en boîte.

ENCORNET

Un baril pèse 250 livres.

COQUES

Un baril de coques fraîches donne une caisse de chair en boîte.
(48 boîtes de 6 onces de chair chacune.)

HOMARDS

200 lb de homard frais donnent une caisse de homard en boîte.
(48 boîtes de 12 onces de chair chacune.)
500 lb de homard frais donnent 1 qtl de chair.

PREFACE

This Report is issued under an arrangement for statistical co-operation between the Dominion Bureau of Statistics and the Government departments having jurisdiction with regard to fisheries throughout Canada. These departments comprise: the Dominion Fisheries Department which exercises jurisdiction over the fisheries of the Maritime provinces, Yukon, British Columbia and the Magdalen Islands, and the Fisheries Branches of departments of Ontario, Quebec, Manitoba, Saskatchewan and Alberta which have jurisdiction over the fisheries of their respective provinces, excepting in the case of Quebec, the fisheries of the Magdalen Islands. The province of British Columbia has a Fisheries Branch, but it does not engage in independent statistical work.

Under the arrangement above referred to, the statistics of the catch, and of the products marketed in a fresh state or domestically prepared, are collected by the local fisheries officers, checked in the Department of Fisheries, and co-ordinated and compiled in the Dominion Bureau of Statistics. In the case of manufactured fish products, schedules in conformity with those of other sections of the Census of Industry are sent by the Bureau to the operators of canneries, fish-curing establishments, etc., the fisheries officers assisting in securing an expeditious and accurate return. The grateful acknowledgments of the Bureau are tendered to the officers of the provincial governments who co-operate in these arrangements.

R. H. COATS,

Dominion Statistician

Dominion Bureau of Statistics,

Ottawa, October 12, 1938.

6625S—1½

THE FISHERIES OF CANADA

The Early Fisheries.—*Fishing is one of the earliest and most historic industries of Canada. Leaving aside inconclusive evidence in favour of authentic record, one must ascribe to Cabot the honour of having discovered, in 1497, the cod banks of Newfoundland, when he first sighted the mainland of North America. He reported that the sea was so covered with fish that they could be caught "with baskets, a stone being attached to make the basket sink in the water". Cape Breton, one of the oldest place-names in America, is a memorial of the early French fishermen —and the Spaniards and the Portuguese were but little behind. Fernandez de Navarette mentions all three as frequenters of the "Grand Banks" before 1502. The fishing was by hand lines over barrels made fast to the bulwarks to prevent fouling, the vessels remaining during fine weather, then returning to France with from 30,000 to 50,000 cod. Voyages along the coast soon showed the cod as plentiful inshore as on the outer banks, and it became common for a crew to anchor in a bay, erect a hut on shore, and make daily excursions to the fishing grounds—the product being salted and dried on land and at the end of the season shipped to France. Jacques Cartier, when he went up the St. Lawrence in 1534, found traces everywhere of these early "Captains Courageous" and of their rivalries in arms no less than in the capture of the teeming product which had tempted them so far from home. An establishment of the kind mentioned was founded at Tadoussac by Chauvin in 1599. Soon the fishermen began to stay all winter and thus to erect permanent fishing settlements. The first grant of the fisheries of Canada was made by the King of France to de Monts in 1603. Fishing, therefore, may well be regarded as the first industry to be systematically prosecuted by Europeans in what is to-day the Dominion of Canada. It has never since ceased to yield a perennial harvest.*

The Canadian Fishing Grounds.—*Canada's fishing grounds are perhaps the most extensive in the world. On the Atlantic, from Grand Manan to Labrador, the coast line, not including the lesser bays and indentations, measures over 5,000 miles. The bay of Fundy, 8,000 square miles in extent, the gulf of St. Lawrence, fully ten times that size, and other ocean waters comprise not less than 200,000 square miles or over four-fifths of the area of the fishing grounds of the North Atlantic. In addition there are on the Atlantic seaboard 15,000 square miles of inshore waters controlled entirely by the Dominion. Large as are these areas they represent only a part of the fishing grounds of Canada. The Pacific coast of the Dominion measures 7,180 miles in length and is exceptionally well sheltered, whilst throughout the interior is a series of lakes which together contain more than half of the fresh water on the planet, Canada's share of the Great Lakes alone amounting to over 34,000 square miles, a total which of course does not include lake Winnipeg (9,457 square miles) lake Manitoba, and others of even greater area.*

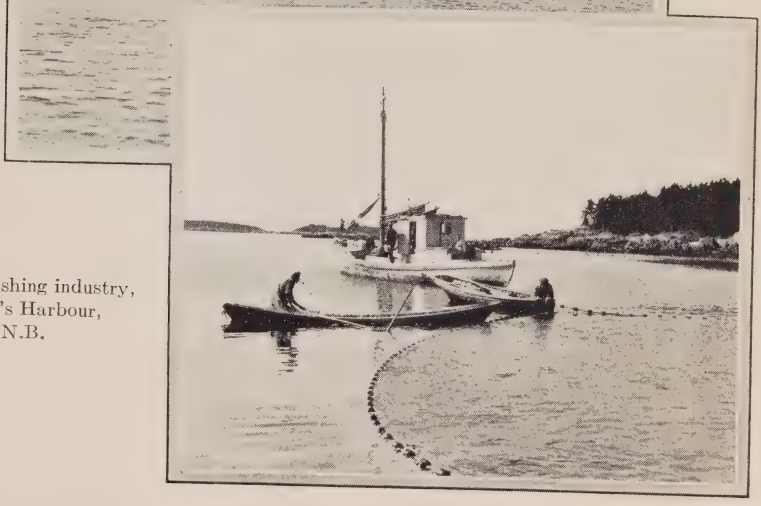

Still more important than the extent of the Canadian fishing grounds is the quality of their product. It is an axiom among authorities that food fishes improve in proportion to the purity and coldness of the waters in which they are taken. Judged by this standard, the Canadian salmon, cod, halibut, herring, mackerel and whitefish are the peers of any in the world. It is possible, therefore, to state that by far the most valuable fisheries of the western hemisphere, if not of the globe, belong to Canada.

It will be seen from the foregoing that it is impossible to deal with the Canadian fisheries in the aggregate; they are those of a continent rather than of a country, and are of corresponding diversity. Omitting the Hudson Bay and peri-Arctic region, which extends from Ungava to Alaska, there are roughly the following divisions of the Canadian fisheries:

FISHERIES OF THE MARITIME PROVINCES

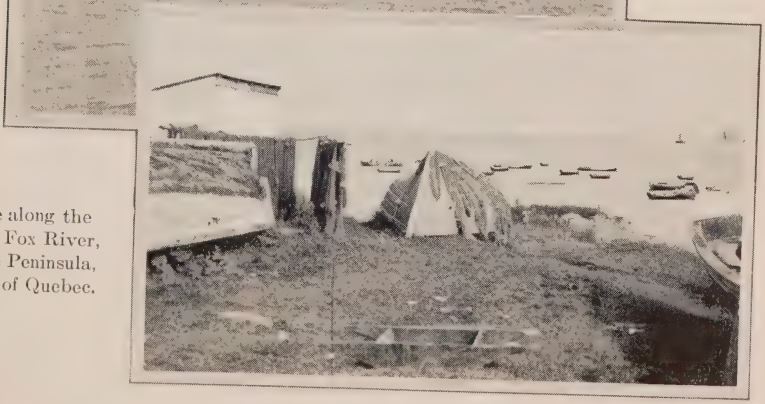

Oyster cultivation dredges, P.E.I.

Sardine fishing industry, Black's Harbour, N.B.

Section of Waterfront at Lockeport, N.S.

Scene along the shore, Fox River, Gaspé Peninsula, Prov. of Quebec.

Drying Fish, Lunenburg harbour, N.S.

Tignish run fish wharf and lighthouse, Prov. of P.E.I.

Tignish run—approach to fishing village

1. Atlantic Fisheries.—*These were the first Canadian fisheries in point of time and until 1918 they remained the most important for aggregate value of product. Cod, halibut, haddock, herring, mackerel, smelt, sardine, swordfish, lobster and oyster fisheries are included. The estuarian and inland waters of the Maritime Provinces and of Quebec are sometimes considered as distinct; if they are added, the list of products would embrace the salmon, the shad, the alewife, the striped bass, the tom cod, and the maskinonge. Conditions are fairly uniform throughout these fisheries, which are commonly divided into the inshore and deep-sea fisheries. The inshore or coastal fishery is carried on in small boats, usually motor driven, with crews of two or three men, and in a class of small vessels with crews of from four to seven men. The means of capture employed by boat fishermen are gill nets and hooks and lines, both hand lines and trawls; whilst from the shore are operated trap nets, haul seines and weirs. Haddock as well as cod is a staple product; during the spring and summer it is split and salted but the important season comes with the autumn, when the fish are shipped fresh or smoked. The deep-sea fisheries are worked by vessels of from 40 to 100 tons, carrying from twelve to twenty men operating mainly with trawl lines from dories, although some fishing is done directly from the vessels by means of hand lines. The fleets operate on the various fishing banks, such as Grand Bank, Middle Ground and Banquereau. The vessels, built in the home shipyards, remain at sea, sometimes for months at a time, and in the hands of sailors who have no superior, seldom come to grief. When they return, the fish, which have been split and salted on board, are taken on shore and washed and dried. The West Indies provide the chief market for this product; no cod fish in the world stands the tropical climate like that cured by the fishermen of the Maritime provinces. Steam trawling as it is carried on in the North Sea was introduced on the Atlantic coast of Canada a number of years ago. The trawlers operate practically the whole year and their catches are utilized entirely for the fresh fish trade. Under the Fisheries Act, trawlers must be registered as British ships in Canada, owned in Canada and licensed by the Minister of Fisheries, and their operations must be restricted to waters at least 12 miles from shore.*

Lobstering operations, which commenced about 1870, provide another distinctive industry. In that year there were three lobster canneries on the Atlantic coast of Canada; in 1937 the canneries numbered 277 and gave work to over 5,000 people; 30,000,000 lobsters is a normal catch. The difficulty of enforcing regulations prohibiting the capture of undersized and spawning lobsters offers a constant problem in connection with the output, but with the co-operation of the fishermen themselves the fishery may be maintained and the annual harvest show no decline. In New Brunswick the canning of sardines, which are young herrings and not a distinct type of fish, has, during the past four years, exceeded in importance the lobster industry. The oyster fishery, whose early abundance was for a number of years greatly diminished, is being brought back to its former position of importance through the development by the Government of oyster farming; favourable areas in Prince Edward Island and Nova Scotia waters have been seeded, and the work in connection with the oyster culture is being carried on under the direction of experts.

The fishing population of the Maritime provinces is a specialized and stable industrial class. The coast-wise fisheries are operated from April to November, to January in sheltered districts; and although the larger vessels work all winter, several thousand men are available for a time each year for other employment. This they find about the small plots of land which the most of them own or occupy, in the lumber camps of New Brunswick, or in the collieries of Nova Scotia. A few from Lunenburg and other centres engage in the West Indian trade. Apart from restrictions of weather and close seasons, the prevailing method of paying the men on shares is a further tendency in years of low catches or prices to drive them into secondary occupations.

2. Inland Fisheries.—*The Great Lakes and tributary waters of the St. Lawrence are a second great division of the Canadian fisheries. The value of the inland fisheries of Quebec lies chiefly in the output of the eel, dore (pickerel), and sturgeon fisheries. In Ontario, whitefish, trout, pickerel and lake herring are the most important commercial fishes, though pike, sturgeon and coarse fish yield a fair return. The season on the Great Lakes lasts from six to eight months, and though fishing through the ice is followed by many a large number depend on miscellaneous employment between the seasons. Moving westward, lake Winnipeg, lake Winnipegosis, lake Manitoba and the smaller lakes to the north and east furnish most of the fish products of Manitoba. Whitefish and pickerel are the chief products, but pike, tullibee, goldeye and many other varieties are found. In Saskatchewan and Alberta commercial fishing is confined to the regions north of the Saskatchewan river, where whitefish in large quantities are taken. The difficulties in connection with transportation have not yet been surmounted; some of the greatest lakes of the continent—Reindeer, Great Slave, Great Bear—and hundreds of smaller bodies of water are still beyond reach from a marketing point of view. The lakes of the west, however, repeating the part which the St. Lawrence played in the days of the French regime, and the cod banks in the history of New England, have assisted greatly in the settlement of the country by providing a much needed food supply for early arrivals.*

3. Pacific Fisheries.—*In British Columbia there is an interior fishing region which corresponds in the main to the prairie section; in the early history of the province it is doubtful if the fur trade (which opened the door by way of the Rocky Mountains to later enterprise) could have established its footing but for these fisheries. The great wealth of British Columbia, however, in this respect—the source from which she contributes approximately two-fifths of the marketed value of the fish products of Canada and has built up a trade which reaches to the ends of the earth—is in the estuarian salmon fisheries of the Fraser, the Skeena, the Naas, and other rivers of the Pacific slope. Every species of this king of food fishes known to the waters of the Pacific (which, however, is not the salmo salar or true salmon) is to be found on the British Columbia coast—the sockeye, the spring, the cohoe, the pink and the chum salmon. Of these, the sockeye, though not taken in such great numbers as the pink and chum species, is by far the most important, owing to its prevailing deep red colour and excellent texture, which have created so keen a demand for it in British and foreign markets. On the Fraser river, which used to be the chief source of supply, but which has now yielded place to the Skeena and other northern waters, the yield varies to a considerable extent from year to year. The run begins late in July and is at its height in the opening weeks of August, though the northern rivers have a somewhat earlier season. The spring or quinnat salmon is a much larger fish; it was the first species used in the United States for canning. The run begins early in the spring and continues until the end of July. The cohoes are smaller, running, like the sockeye, in schools, during September and October on the Fraser, and earlier on the northern streams. The chum salmon is canned and a considerable quantity also is salted for export to the Orient. The run of pink salmon comes about three or four weeks later than that of the sockeye. Many of the employees in the salmon fishery are Chinese, Japanese and Indians, the Chinese finding work in the canneries and the Indians and Japanese in the fishing operations.*

Halibut abounds off Vancouver island and between the Queen Charlotte Islands and the mainland, and though the first endeavour to establish an industry was unsuccessful, by 1903 British Columbia supplied 10,000,000 pounds of 25,000,000 pounds taken on the whole Pacific coast north of California. The former figure has since, in many years, been trebled, although after 1930 the quantity was reduced owing to the restrictions imposed under the provisions of the Treaty signed by Canada

and the United States for the conservation of this fishery. The quantity of herring taken annually by British Columbia fisherman represents over 60 per cent of the total catch of sea herring for the Dominion, and it is used chiefly in the preparation of the dry-salted product and in the manufacture of oil and meal. The pilchard, which is of the herring family, and is reported for Canada on the Pacific coast only, occupies fourth place among the chief commercial fishes of British Columbia. There is a large annual output of canned pilchard, but the principal items of production of the fishery are oil and meal. There is also the whale fishery, which has two stations on the Queen Charlotte Islands. The catch includes whales of many kinds—sulphur bottom, finback, humpback and sperm, the last mentioned predominating. Whale hunting is carried on in boats with Svend Foyn harpoon guns—a method which was introduced from Norway. Every scrap of the whale is used—oil, meal and fertilizer are its more important products. Black and ling cod, oulachon, flounders, skate, soles, clams and oysters are also abundant in British Columbia waters.

A word might be added with regard to the Canadian fur-seal fisheries of the Pacific, whose historic headquarters were the city of Victoria. Early in the present century the industry had, owing to the scarcity of the animals, been reduced to small proportions, and in 1911 a treaty was arranged between Great Britain, the United States, Japan and Russia, the terms of which prohibit pelagic or open-sea fishing. This treaty, still in effect, has for its object the conservation of the seals and it has resulted in greatly increasing the size of the herds. As compensation for the suspension of her sealing rights Canada receives annually from the Governments of the United States, Japan and Russia a share of the proceeds of the sealing on the Pribaloff Islands and other rookeries owned by the respective countries. The Indians of British Columbia are exempt from the provisions of the Treaty, but their hunting must be carried on from open boats, manned by not more than five persons each and without the use of firearms.

Game Fish.—*The above is a purely industrial and commercial survey. Fishing for sport, however, has its economic side in a country of such famous game fish as the salmon of the Restigouche and other rivers of the Maritime provinces, the black bass and speckled trout of the Quebec and Ontario highlands, the red trout of the Nipigon and the salmon and rainbow trout of British Columbia. A considerable public revenue is derived from the leasing of waters in sparsely settled districts to clubs and individuals for sporting purposes. Several hundreds of guides find employment here during the summer months.*

The Government and the Fisheries.*

Upon the organization of the Dominion Government at Confederation, the administration of the Canadian fisheries was placed under the Department of Marine and Fisheries. Early in 1930 a department of Fisheries, in charge of its own Minister, was organized. This Department now administers all the tidal fisheries (except those of the mainland portion of Quebec, which by agreement are under provincial administration), the non-tidal fisheries of Nova Scotia, and the fisheries of Yukon and the Northwest Territories. The non-tidal fisheries of New Brunswick, Prince Edward Island, Ontario, the Prairie Provinces, and British Columbia, and both the tidal and non-tidal fisheries of Quebec (except the fisheries of the Magdalen Islands) are administered by the respective provinces, although the Dominion Department does certain protective work in non-tidal waters of New Brunswick, Prince Edward Island and British Columbia. The right of fisheries regulation for all the provinces, however, rests with the Dominion Government. [See the Fisheries Act (22-23 Geo. V, c. 42).] The expenditure of the Dominion on the fisheries in the fiscal year 1937–38, including civil government salaries, contingencies, etc., was $2,162,111, and the revenue $119,824.

* Revised under the direction of W. A. Found, Deputy Minister of Fisheries, Ottawa.

Conservation.—*River and lake fisheries certainly, and sea fisheries probably, if left to themselves, conform to the economic law of diminishing returns. The Canadian Government, accordingly, has had for a main object the prevention of depletion by the enforcement of closed seasons, the forbidding of obstructions and pollutions and the regulation of nets, gear and fishing operations generally. In addition, an extensive system of fish culture has been organized: the Dominion, in 1937, operated 16 main hatcheries, 7 subsidiary hatcheries, 3 rearing stations, 8 salmon retaining ponds and several egg collecting stations at a cost of $218,055 and distributed 61,831,780 trout and salmon eggs, fry and older fish. The young fish are distributed* gratis *if the waters in which they are to be placed are suitable and are open to public fishing. Investigations and experiments directed toward the culture of the oyster have been carried on since 1929 at Malpeque bay, Prince Edward Island, by the Dominion Department of Fisheries, and are now being extended to areas in Nova Scotia.*

Direct Assistance.—*On the Atlantic coast where conditions attending fishing operations make such a service desirable, a system has been established by broadcasting radio reports as to weather probabilities, bait and ice supplies, and ice conditions. Further, under authority of the Fish Inspection Act (R.S.C., 1927, c. 72) systems of instruction in improved methods of fish curing and barrel making have been in operation for several years.*

By parliamentary vote the sum of $300,000 was made available for use by the Department of Fisheries during the fiscal year 1937-38 to aid, in co-operation with the provinces concerned, in the re-establishment of needy fishermen. Four provinces where administration of the fisheries is in federal hands in whole or in part—Nova Scotia, New Brunswick, Prince Edward Island and Quebec—entered into agreements with the federal authorities in carrying out the purpose of this vote. In each of the four the Department of Fisheries spent two dollars for each dollar spent by the provincial government in direct aid to fishermen who were in need of assistance and the total spendings from the departmental appropriation were $218,004. In the Maritime Provinces and the Magdalen Islands loans were made to fishermen and associations of fishermen and the total number of these loans to fishermen was 9,176 and to fishermen's associations, 28.

In further effort to aid the fishermen, in this case by expanding the demand for their products, large-scale advertising was continued by the Department of Fisheries during the fiscal year. In the main, the advertising was carried on within the Dominion but $15,000 was expended in the United Kingdom with the particular object of increasing sales of Canadian canned lobster and canned salmon. In Canada many publications of different classes were used in the campaign, which extended to all parts of the country and directed attention to the merits of Canadian fish foods generally.

Scientific Research.—*Stations under the direction of the Fisheries Research Board of Canada, formerly the Biological Board, for the conduct of research into the numerous complex problems occurring in connection with the fisheries are established at Halifax, N.S., St. Andrews, N.B., Nanaimo and Prince Rupert, B.C., and in Gaspe county, Que. The biological stations of St. Andrews and Nanaimo are concerned chiefly with problems of fish life, while at the fisheries experimental stations at Halifax, Prince Rupert and Gaspe county, attention is devoted to the practical problems of the fishing industry. A biological station, chiefly for oyster investigation work, is conducted by the Board at Ellerslie, P.E.I., and a sub-station for salmon investigations at Cultus Lake, B.C. The Fisheries Research Board employs a permanent staff of scientists. The life-histories of edible fishes, the bacteriology of fresh and cured fish, improved methods of handling and preparing fish, and numerous other practical problems have been taken up and scientific memoirs and reports issued.*

International Problems.—*Fisheries problems of international importance have arisen from time to time on both coasts of the Dominion, as well as in the Great Lakes area where problems are complicated by the number of State governments concerned. A major international problem has been the question of United States privileges in the Atlantic fisheries of Canada. An outline of the history of this question may be found on pages 9 and 10 of* Fisheries Statistics of Canada, 1935. *Since 1933, under the former* modus vivendi *plan, which grew out of the unratified treaty of 1888, United States fishing vessels have again been permitted to enter Canadian ports to buy bait and other fishing supplies.*

Joint steps to deal with two important Pacific Coast fisheries problems have been taken in recent years by Canada and the United States—one problem the preservation of the halibut fishery of the Northern Pacific Ocean and Bering Sea, the other the protection, preservation and extension of the sockeye salmon fisheries in the Fraser River system.

The first treaty relating to the halibut fishery was signed on March 2, 1923. Under this treaty a closed season for halibut fishing in each year was provided for and an international commission was set up to conduct an investigation into the fishery and the life history of the halibut. A further convention, signed at Ottawa on May 9, 1930, and ratified by the respective Governments on May 9, 1931, provided for the regulation of the fishery by the commission through the division of the convention waters into fishing areas, changing of dates for closed seasons, and so on. A new convention was signed at Ottawa on January 29, 1937, extending the regulatory powers of the commission. Steps taken by the international commission under the several conventions have resulted in steady improvement in the state of the halibut fishery in the waters concerned.

The Sockeye Salmon Fisheries Convention was signed at Washington on May 26, 1930, but exchange of ratifications did not take place until July 28, 1937, although the Canadian Parliament had given approval to the treaty several years before that time. The convention waters include not only the Fraser River watershed in British Columbia but also certain Canadian, United States and international waters making up the Fraser approach and through which the Fraser River sockeye pass.

Under the sockeye treaty the International Pacific Salmon Fisheries Commission was set up in 1937, consisting of three members appointed by Canada and a like number appointed by the United States. The commission which has established its headquarters at New Westminster, B.C., is empowered by the convention to make "a thorough investigation into the natural history of the Fraser River sockeye salmon, into the hatchery methods, spawning ground conditions, and other related matters," to conduct the sockeye salmon fish cultural operations in treaty waters, and to recommend to the Governments "removing or overcoming obstructions to the ascent of sockeye salmon, that may now exist or may from time to time occur, in any of the waters covered by this convention. . ." Certain powers of regulation were also given the commission by the convention but one of the understandings on which the treaty was approved by the two countries was that "The commission shall not promulgate or enforce regulations until the scientific investigations provided for in the convention have been made covering two cycles of sockeye salmon runs, or eight years."

Fishing Bounties.—*By an Act of 1882 (45 Vict., c. 18) for the development of the sea fisheries and the encouragement of boat-building, provision was made for the distribution, annually, among fishermen and the owners of fishing boats and vessels on the Atlantic waters, of $150,000 in bounties, representing the interest on the amount of the Halifax Award. An Act of 1891 (54-55 Vict., c. 42) increased the amount to $160,000, the details of the expenditure to be settled each year by Order in Council.*

THE MODERN INDUSTRY

The latter half of the nineteenth century saw the commencement of expansion in the commercial fishing industry of Canada. In 1844 the estimated value of the catch was only $125,000. It doubled in the following decade and by 1860 had passed the million mark. Ten years later it was six millions and this was again more than doubled in 1878. By 1900 it had reached a total of 21 millions and the growth continued with little interruption until 1918, when it reached the high record of 60 millions. Since then there have been decreases in value, but these are due to lower prices rather than to smaller catches. In 1937 the value was $38,976,294. It will be understood that the figures given represent the total value of the fish as marketed, whether in a fresh, dried, canned or otherwise prepared state. Meanwhile the number of employees has increased in like proportion, mounting in some years to over 90,000, while the capital investment has gone as high as $64,000,000. In 1937 the number of employees was 84,025, and the capital investment, $44,926,764.

Among the different kinds of fish, the cod of the Atlantic and the salmon of the Pacific, in the earlier years of the fishing industry, disputed the primacy, but since 1895 salmon has definitely taken the lead, and the heavy pack and high price of lobsters have, in more recent years, sent cod down to third place. The value of output of the salmon fishery in the period 1869 to 1937 was approximately 474 million dollars, and that of the cod fishery, 293 million. This has affected the relative standing of the provinces accordingly, British Columbia now occupying the leadership that in earlier times belonged to Nova Scotia.

TRADE.—*The domestic consumption (a) of fish is relatively small in Canada, and the trade depends largely upon foreign markets. From 60 to 70 per cent of the annual capture is an average export, of which the United States takes approximately one-half and the United Kingdom one-fourth. In the calendar year 1937, total exports amounted to $28,902,152, of which $14,004,575 went to the United States and $6,721,764 to the United Kingdom. A further division shows that $11,178,572 went to British Empire countries and $17,723,580 to foreign countries. The most important single export is canned salmon (to the United Kingdom and European markets), followed by fresh lobster, canned lobster, fresh salmon, fresh whitefish, and dried cod (to the West Indies, South America, etc.). For fresh fish the United States is the chief market. Canadian imports of fish in 1937 amounted to $2,877,131.*

(a) See paragraph headed "Direct Assistance", page 8, for note on the work undertaken by the Dominion Government to increase the consumption of fish in Canada, and to expand the markets abroad.

FISHERIES STATISTICS OF CANADA, 1937

The total value of production of the fisheries of Canada for the year 1937 was $38,976,294, compared with $39,165,055 in 1936 and $34,427,854 in 1935. These totals represent the value of the product as marketed, whether sold for consumption fresh, domestically prepared or factory made. The following table shows the quantity caught and the value marketed of the chief commercial fishes (those valued at $100,000 or upwards) for the past five years, with a statement in the final column of the increase or decrease for 1937 compared with 1936.

1. Quantity (a) and Value (b) of the Chief Commercial Fishes, Canada, 1933 to 1937

Kind of Fish		1933	1934	1935	1936	1937	Increase or decrease 1937 compared with 1936 inc. + dec. −
Salmon	cwt.	1,456,501	1,696,856	1,824,205	2,029,704	1,724,213	− 305,491

(a) Quantity caught. (b) Value marketed. (c) Previous to 1934 the totals for halibut included landings at British Columbia ports by United States vessels, whereas from 1934 onward the United States landings are excluded from the statistics and the figures cover landings by Canadian vessels only. See footnote at page 140 for landings in 1937 by United States vessels. (d) Prior to 1935 clams and quahaugs were combined.

REVIEW OF THE FISHERIES FOR THE CALENDAR YEAR, 1937

Canada's commercial fishermen made landings of fish and shellfish totalling 10,918,048 hundredweights during the calendar year 1937 and the catch had a marketed value of $38,976,294. As compared with results for the calendar year 1936, there was a decrease of 170,231 hundredweights in catch and of $188,761 in marketed value. The sea fisheries production was valued at $31,984,047 on the market and the production from the inland fisheries at $6,992,247. The latter figure represented an increase of $778,696, but the value of the sea fisheries catch was $967,457 below the 1936 figure. Values increased in Nova Scotia, New Brunswick, Ontario, Manitoba, Saskatchewan, and Alberta, but there were decreases in British Columbia, Quebec, Prince Edward Island and the Yukon Territory.

Major Fisheries.—Salmon landings for the year again exceeded in marketed value the return from any other of the Dominion's fisheries, although the quantity of salmon taken, 1,724,213 hundredweights, was less by 305,491 hundredweights than the production in the preceding year. The salmon marketed value, $12,370,219 decreased by $1,497,294. The lobster fishery came next to the salmon fishery in point of marketed value return, and totalled $4,633,429, as against $4,383,428 in 1936. The quantity of lobsters taken, 309,950 hundredweights, showed an increase of 26,677 hundredweights. The cod, herring and whitefish fisheries came next in order, ranked according to marketed value. In the case of cod, the landings totalled 1,523,626 hundredweights, with a marketed value of $3,140,230—a decrease of 176,348 hundredweights on the quantity side and of $191,520 on the value side. The herring catch, increasing by 205,122 hundredweights, amounted to 3,057,503 hundredweights. Its marketed value was $2,556,883, or $19,650 less than in 1936. Whitefish landings and marketed value alike increased. The total catch of whitefish, all taken in inland waters, was 173,675 hundredweights, an increase of 29,072 hundredweights. Its marketed value amounted to $1,887,889, an increase of $362,189.

ATLANTIC COAST SEA FISHERIES

In the following table the total commercial catch of sea fish and shellfish on the Atlantic coast is shown by provinces for each of the calendar years 1936 and 1937:

	1936	1937
	cwt.	cwt.
Nova Scotia	2,650,922	2,703,078
New Brunswick	1,586,450	1,377,907
Prince Edward Island	248,138	275,250
Quebec	892,594	715,936
Total landings	5,378,104	5,072,171

Cod, Haddock, Hake and Cusk and Pollock.—During 1937 the landings of these species of fish on the Atlantic coast totalled 2,367,209 hundredweights, as compared with 2,449,253 in the preceding year. The marketed value of the catch showed a decrease of $113,271, totalling $4,914,789, as against $5,028,060 in the earlier year. There was a large increase, not very much less than 100 per cent in the 1937 catch of pollock, which totalled 239,845 hundredweights. Hake and cusk landings, 229,225 hundredweights, increased slightly, but for both hake and cod the year's production was smaller than in 1936. The haddock catch, 388,823 hundredweights, was 14,187 below the figure for the preceding year, but the marketed value, $1,296,313, increased a little. The total catch of cod was 1,509,320 hundredweights, with a marketed value of $3,097,278. The decrease on the production side was 182,555 hundredweights, and in the case of value there was a drop of $208,536.

Nova Scotia, which produces much more cod than any other province, increased its landings somewhat during the year and there was a small gain in Prince Edward Island. On the other hand, there was a decrease in New Brunswick, but the major reduction was in Quebec, which ranks second only to Nova Scotia in importance as a producer of cod. In 1936 Quebec's landings were 418,950 hundredweights, but in 1937 they dropped to less than 231,864. Out of the total haddock landings all save 3,776 hundredweights were taken by Nova Scotia fishermen and their catch was 6,801 hundredweights less than in the year before. In each of the other three Atlantic provinces fewer haddock were taken than in the preceding year. New Brunswick alone among the provinces shows a reduction in the catch of hake and cusk.

Both in New Brunswick and Nova Scotia, the pollock producing provinces, there were large increases in the year's landings. In New Brunswick the catch of 1,333,360 hundredweights was considerably more than twice as large as it had been in 1936, while in Nova Scotia there were landings of 106,485 hundredweights, as compared with 75,210. The total pollock marketed value of $222,208, was not far short of being twice as large as in the year before.

Dried Fish Production.—Some increase took place in the production of dried fish (cod, haddock, hake and cusk, and pollock) which amounted to 261,285 hundredweights, as compared with 234,960 in 1936. The marketed value of the product, $1,123,552, showed an increase of $133,393. Much the greater part of the dried fish put up consists of cod, with Nova Scotia the largest source of supply. The year's output of dried cod was 189,930 hundredweights, which meant a small gain over the 1936 figure. A sharp drop in the Quebec production was an adverse feature. In Nova Scotia there was a substantial increase and a relatively large increase in New Brunswick. In Prince Edward Island there was a decrease but the dried fish industry is not conducted on a large scale in the Island province. The quantity of dried cod put up in Quebec was less than half as large as it had been in the preceding year—26,702 hundredweights, as compared with 58,209 hundredweights. The total marketed value of the dried cod put up in all four provinces was $923,496 or an increase of $41,603. With the pollock catch increasing materially there was naturally an increase in the quantity of the fish put up in the dried form—48,558 hundredweights, as against 31,158 hundredweights. The marketed value of the dried pollock was $130,190, an increase of $58,957. The output of dried hake and cusk fell off in New Brunswick, showed some increase in Prince Edward Island, but was very much greater in Nova Scotia than it had been in 1936. The net result was that the aggregate production was 21,470 hundredweights as against 13,516 hundredweights, and the marketed value, $65,264, was nearly twice as great as the total for the earlier year. A slight increase took place in the production of dried hake. In the case of haddock only a comparatively small quantity is dried. The total quantity of boneless fish put up on the coast, 24,245 hundredweights, was not quite as large as the 1936 production.

Herring, Mackerel and Sardines.—In the case of the herring fishery, there were increased landings both in Quebec and Prince Edward Island, but there was a drop in New Brunswick, the largest Atlantic producer of herring, and another drop in Nova Scotia. The total herring catch on the coast, 1,077,472 hundredweights, was 103,365 hundredweights less than in 1936. A large increase in Quebec's landings of mackerel was the main factor in bringing the total production of these fish to 239,163 hundredweights or 12,525 hundredweights above the 1936 figure. The Quebec catch, 41,840 hundredweights, was two and one-half times as great as it had been in 1936. There was a small increase in the Prince Edward Island catch, a small decrease in New Brunswick and a fairly substantial drop in Nova Scotia. The mackerel marketed value reached a total of $635,740 an increase of $173,874.

Practically all the catch of sardines is taken in southwestern New Brunswick, and in 1937 the landings there totalled 158,842 barrels, as compared with 246,368 barrels in the preceding year. On the other hand, the output of canned sardines increased, totalling 423,043 cases, as compared with 393,854 cases. The marketed value of the canned output was $1,458,817, an increase of $77,589.

Flounders, Halibut and Swordfish.—The flounder production for the year increased quite sharply with an accompanying rise in total landed value, and there was also an increased catch of halibut, but the landings of swordfish, all made by Nova Scotia fishermen, totalled only 15,020 hundredweights, as against 17,853 in 1936. The greater part of the flounder catch was taken by Nova Scotia fishermen, as usual. Nova Scotia landings of these fish, 10,445 hundredweights, increased by 3,829. There were few changes in the flounder figures in the other provinces. By far the greater part of the Atlantic catch of halibut also is taken by Nova Scotia fishermen and during the year under review they landed a few hundredweights more than they had taken in 1936, or 31,301 hundredweights, as compared with 31,044. Quebec's landings increased, but in New Brunswick, a small producer, there was a reduction.

Salmon and Other River Spawning Fish.—The year's catch of salmon, 30,361 hundredweights, was slightly less than it had been in the preceding year, when 31,931 hundredweights were landed. In New Brunswick the landings were 15,637 hundredweights, in Nova Scotia 4,647 hundredweights and in Prince Edward Island 10 hundredweights—decreases in all three provinces. In Quebec, however, the landings amounted to 10,067 hundredweights, as against 9,317. Smelt landings decreased in each of the four provinces with a drop of 21,155 hundredweights in New Brunswick, where the greater part of the annual smelt catch is taken. The total catch for the coast was 66,048 hundredweights, as against 93,007 hundredweights in the preceding year. There was also a sharp reduction in the New Brunswick catch of alewives with a result that although landings of these fish increased in Nova Scotia and Prince Edward Island, the two other producing provinces, the catch for the coast as a whole, 73,854 hundredweights, was 14,319 hundredweights below the 1936 figure. New Brunswick landings of alewives totalled 43,113 hundredweights, as compared with 61,122. In Nova Scotia the catch was 29,078 hundredweights as against 26,707, and in Prince Edward Island, 1,663 hundredweights as against 344 hundredweights.

Lobsters.—With the catch totalling 309,950 hundredweights, the landings of lobsters, which are taken only in our Atlantic coast waters, showed an increase of 26,677 hundredweights over the production of the preceding year. The total marketed value, $4,633,429, showed an increase of $250,001. The net increase in landings was due to more successful fishing in the waters of Nova Scotia and New Brunswick than the fishermen had experienced in 1936. In both these provinces the catch increased quite sharply, in New Brunswick by 16,087 hundredweights and in Nova Scotia by 13,870 hundredweights.

Other Shellfish.—Scallops, oysters and clams, among the other shellfish, were all taken in increased quantities in 1937. Only in the case of quahaugs, or hard-shelled clams, was there a reduction, and that a small one. New Brunswick and Prince Edward Island are the main producers of quahaugs and in the former province the year brought a slight decrease, while in Prince Edward Island there was a gain. In Nova Scotia production fell off. Taking the three provinces together, the quahaug landings amounted to 2,282 barrels as compared with 2,351 in 1936. The landed value of catch, $9,217, showed a small reduction. In the case of the scallop fishery which, for the most part, is carried on in western Nova Scotia, the total catch, 183,755 gallons (shelled), was 12,993 gallons greater than in 1936, but prices were weaker than in the earlier year with the result

that the total marketed value was only $296,529 as against $334,424. The increase in landings was all in Nova Scotia. In New Brunswick the landings decreased quite sharply and in Quebec there was also a reduction, although the scallop fishery is not important in that province.

An increase in the New Brunswick landings of oysters was responsible for lifting the total production for the coast to 22,355 barrels, or 1,585 barrels more than were taken in the preceding year. In New Brunswick the catch increased from 9,109 barrels in 1936 to 11,546 barrels in 1937. In Prince Edward Island the landings were 6,478 barrels or 264 barrels less than in 1936. The Nova Scotia catch, 4,331 barrels, showed a drop of 588 barrels. The total marketed value of the oyster catch for the coast as a whole was $143,880, an increase of $13,645.

The clam catch increased by 4,770 barrels in New Brunswick and by 1,591 barrels in Prince Edward Island, but there was a decrease of 3,438 barrels in Nova Scotia and a drop of 640 barrels in Quebec. The total clam landings for the coast, 48,197 barrels, had a marketed value of $144,813. As compared with 1936, there was an increase of 2,283 barrels on the quantity side and $40,325 on the marketed value side.

PACIFIC COAST FISHERIES

During the year British Columbia's commercial fishermen made catches aggregating in all 4,954,195 hundredweights with a marketed value of $16,155,439. On the catch side there was an increase of 57,442 hundredweights over the 1936 figures but in the case of marketed value there was a decrease of $1,076,095. This drop in value was due mainly to reduction in the returns from the salmon fishery, which is the most important single fishery of the Dominion.

Salmon.—The catch of salmon was 1,691,736 hundredweights as compared with 1,995,499 in 1936. With the reduction in catch there was of course a reduction also in the amount of canned salmon put up in the province. All told the marketed value of the year's salmon production was $11,907,905 as compared with $13,387,344 in 1936. Decreases in the packs of chums and cohoes were the main features in pulling the year's total pack of salmon down to 1,508,577 cases as against 1,881,026 cases in the preceding year. There was a fairly substantial reduction in the quantity of salmon dry salted during 1937 and there were relatively small decreases also in the output both of salmon oil and salmon meal.

Halibut.—The landings of halibut by British Columbia fishermen again showed an increase, reaching 117,212 hundredweights as compared with 105,918 hundredweights in 1936. On the marketed value side there was an increase of $150,177, the year's total amounting to $1,190,056.

Herring.—There was an increase of 309,170 hundredweights in the year's landings of Pacific herring. In 1936 the herring catch was 1,620,625 hundredweights, but in 1937 the figure increased to 1,929,795. The increase in marketed value, however, was only $39,069 with total value amounting to $1,181,466. With disturbed marketing conditions in the Orient, where all of British Columbia's pack of dry salted herring is marketed, the year's output from the salteries, 203,401 hundredweights, shows a decrease of 179,936 hundredweights. The production of herring meal increased by 4,342 tons, and reached 14,427 tons. There was a large increase in the quantity of herring oil produced, or 1,283,658 gallons as compared with 782,499 gallons in 1936.

Pilchards.—As in the herring fishery, so in the pilchard fishery, there was an increase in catch of 961,485 hundredweights of pilchards, or 72,448 hundredweights more than in the earlier year. The quantity of pilchard oil produced rose from 1,217,097 gallons to 1,707,276 gallons. On the other hand, the output of pilchard meal decreased by 232 tons. The total marketed value of the year's pilchard catch, $902,619, showed an increase of $235,306.

Other Fisheries.—Fewer whales were taken—317 as compared with 370 that were landed in 1936. However, the marketed value of the catch increased by $48,050 and amounted to $220,251. The increase in value was due to firmer prices for whale oil; only 662,355 gallons of the oil were produced as compared with 763,740 gallons in 1936, but the value—$197,227—increased by $52,476. The catch of grayfish or dogfish, 113,220 hundredweights, was not quite as large as the 1936 catch and there were decreases in the quantities of meal and oil produced. On the marketed value side there was a decrease of $2,929. There was a sharp drop in the ling cod catch, which fell from 68,932 hundredweights in 1936 to 42,858 hundredweights. In the oyster and clam fisheries the production was smaller than in 1936. The crab fishery showed some increase and the shrimp landings, never very large, were substantially greater than in the previous year. The landings of black cod rose quite sharply, but there was a decrease in the catch of red and rock cod.

INLAND FISHERIES

There was an increase in the marketed value return from the inland fisheries in 1937. In 1936 the production from these inland or freshwater fisheries was valued on the market at $6,213,551, while in 1937 the value was $6,992,247. The dollar return increased in Ontario, Manitoba, Saskatchewan, Alberta and New Brunswick, but decreased in Quebec and the Yukon Territory. The greatest gain—$406,244—was in Ontario.

Whitefish is the most important commercial species occuring in Canada's inland areas and it will be noticed from table 1 of the present report that the catch in 1937 was considerably greater than the average production in the 1933–1936 period. Of the total whitefish landings last year 55,185 hundredweights were taken by Ontario fishermen, 32,301 hundredweights came from Manitoba waters, 54,725 from Saskatchewan and 27,836 were caught in Alberta. The whitefish landings in Quebec were 3,535 hundredweights. In New Brunswick and the Yukon Territory the production of these fish is always small. Ontario's landings were not as large as the catch in the province in 1936 but in each of the Prairie Provinces the catches increased.

The pickerel catch, although not quite as large as in 1936, was substantially greater than it had been in 1935, 1934 or 1933. Manitoba continued to produce by far the greater part of the total pickerel catch or 104,095 hundredweights out of 143,020. Blue pickerel, taken only in Ontario waters, were landed in greater quantity than in the preceding year. In 1936 the catch was 68,995 hundredweights, while in 1937 it rose to 94,496 hundredweights.

The total commercial landings of trout, 70,588 hundredweights were not quite as large as they had been in 1936 but the marketed value increased. In the earlier year the trout catch was worth $840,958 but in the year under review the value reached $1,031,740.

Note.—The foregoing review of the fisheries of Canada for the year 1937, is issued through the courtesy of the Deputy Minister of Fisheries, in whose department it was prepared.

FISHERIES STATISTICS

The following table gives a statement for the whole of Canada of all fish caught and marketed during the year 1937, with comparative statistics for 1936. For each kind the total caught and the value at the vessel's or boat's side is first given, this being followed by statements showing the form in which each kind was marketed and the value.

Capital Equipment and Employees

In Primary Operations

Capital.—The vessels, boats and gear used in the primary operations of catching and landing the fish in 1937 represented a total capital investment of $26,796,379, of which the amount of $21,882,937 is credited to the sea fisheries and of $4,913,442 to the inland fisheries. By main groups, the total capital is apportioned as follows: vessels, 1,008, value $4,562,314; boats, 39,477, value $10,431,716; and nets, seines and miscellaneous fishing material, $11,802,349. The total investment shows a decrease from the preceding year of $462,171, but an increase over 1935 of $442,997.

Employees.—The number of men employed in the primary operations during the year was 69,981, the work in connection with the sea fisheries absorbing 55,798 of the total number, and the inland fisheries the remaining 14,183. In 1936 the total number employed was 71,735, while in 1935 the number was 68,557.

In Fish Canning and Curing Establishments

Capital.—The capital investment of the fish canning and curing industry, represented by the land, buildings and machinery, products and supplies on hand, and cash and accounts and bills receivable, had a total value in 1937 of $18,130,385, a decrease from the preceding year of $484,207, but an increase over 1935 of $985,579.

Employees.—Employment was furnished by the establishments during the year to a total of 14,044 persons, compared with 15,238 in 1936 and 14,361 in 1935.

Tables 3 to 6, which follow, contain summaries of capital equipment and employees in the primary operations and in fish canning and curing establishments, for Canada as a whole: other tables of the introduction present the information by provinces, while statistics by counties and fishing sub-districts will be found in Part II of the report.

Details of Fish Canning and Curing Establishments

Number of Establishments.—The plants in operation in 1937 numbered 597, classified as follows: lobster canneries, 277; salmon canneries, 72; clam canneries, 21; sardine and other fish canneries, 12; fish curing establishments, 178; freezing plants, 19; and reduction plants, 18. The fish canning and curing industry is confined to the provinces bordering on the sea, the plants being located on the shores of bays and estuaries where they are of easy accessibility to the fishermen making delivery of their catches.

Employees and Salaries and Wages.—The total number of employees recorded by the industry during the year was 14,044, grouped as follows: (1) salaried employees, 602; (2) wage-earners, 9,671; and (3) piece workers, 3,771. The employees under classification (3) are found chiefly in the salmon canneries of British Columbia, where a large part of the work is done under contract, the contractor engaging and paying his own help and being himself paid by the cannery operator according to the quantity of fish packed About 70 per cent of the workers in the British Columbia salmon canneries come under this classification.

Statistics of the number of employees in the establishments are based on the average monthly employment of wage-earners, together with the total number of salaried employees and piece workers for the full season, the method of calculation being as follows: on the report of each establishment an addition is made of the number of wage-earners shown for each month, and the resulting total is divided by the number of months the plant was in operation during the year. For example, a cannery employs 12 persons in May, 14 in June, 12 in July and 10 in August—a total of 48. This total is divided by the number of months in operation, viz., 4, and the result gives the number of wage-earners for the establishment as 12. To this number is added the number of salaried employees, and the number of piece workers, which are recorded for the year or season and not by months. The final figure will be the number of employees credited to the establishment for the year, and the compilation of these totals provides the number of employees in the industry. The period of employment varies with the length of the season of operations: the lobster canneries operate from one to three months, and the salmon canneries for longer periods, while many of the fish curing establishments operate during the entire year. In some of the canneries, also, fish curing operations are carried on prior to, and after the close of, the season for canning. The fluctuation in employment is indicated by the statistics of the number of wage-earners employed in each month. Monthly statistics for piece workers are not available. It should be noted, further, that in this industry, chiefly in connection with the lobster canneries, there are many part-time employees, the work depending to a large extent on the size of the daily deliveries of fish to the canneries. When a large quantity is received, extra help is required for the canning operations, and employment is given to an additional number of persons, many of them women, for perhaps two or three days in the week. No distinction is made in the tables between full time and part time employees.

The industry paid in salaries and wages during the year a total of $4,042,565, of which $722,651 went to the salaried employees, $2,632,120 to the wage-earners, and $687,794 to the piece workers.

The following table gives the number of employees, by classification of employment, and the payments to each group.

7. Employees in Fish Canning and Curing Establishments in 1935, 1936 and 1937—Number and Salaries and Wages

Year	Employees on Salaries		Employees on Wages		Piece-Workers		Total of Employees and of Salaries and Wages	
	no.	$	no.	$	no.	$	no.	$
1935	550	703,075	9,468	2,171,478	4,343	679,395	14,361	3,553,948
1936	558	734,678	10,073	2,544,903	4,607	724,269	15,238	4,003,850
1937	602	722,651	9,671	2,632,120	3,771	687,794	14,044	4,042,565

Wage-earners by Months.—Particulars regarding monthly employment are collected for wage-earners only: in the case of the salaried employees the schedule asks for the number employed at a given date in the year, while for the piece workers, the record is for the average number employed during the year. The months of greatest employment for wage-earners in the industry as a whole, are May and June, the upward trend in these months being due chiefly to employment in the lobster canneries, where the season is at its height. In the salmon canneries the season extends from May to October inclusive; while in the sardine and miscellaneous fish canneries and in the fish curing establishments, employment is fairly constant throughout the year.

The following table gives the number of wage-earners, male and female, employed in each month, and the average number for the year.

8. Wage-earners in Fish Canning and Curing Establishments—Number on Pay Roll each month, 1935, 1936 and 1937 (a)

Month	1935			1936			1937

Average	**3,105**	**960**	**4,065**	**3,589**	**955**	**4,544**	**3,718**	**974**	**4,692**

Classified Weekly Wage Payments.—The inquiry on the schedule under this heading asks that the wage-earners be classified according to the amounts paid to them for a full week in the month of greatest employment. The scale of payments commences with the group of those receiving less than $6 for the week, and advances to the highest payment group which includes employees receiving $50 and over for the week's work. For the female workers the largest single group is the classification covering payments of less than $6, the number of workers in this group totalling 2,137. The inquiry, however, does not distinguish between full time and part time employees and it is probable that many of those recorded in the lowest bracket are part time workers. For the male employees the largest single group is for wage payments of from $12 to $12.99, and this group covers 740 workers.

The following table gives the numbers in the various wage groups in the years 1936 and 1937.

9. Classified Weekly Wage Payments—Amounts Paid to Manual Workers in Fish Canning and Curing Establishments for one week in month of Greatest Employment, 1936 and 1937 (a)

(a) Exclusive of piece workers.

Materials Used.—The cost value of the fish and other materials used by the industry in 1937 was $16,318,781, this total comprising $12,179,219 for the fish and $4,139,562 for miscellaneous items—edible oils, salt, containers, etc. The quantity of fish used was 7,431,030 cwt., or 75 per cent of the total quantity of sea fish caught and landed by Canadian fishermen during the year. The remaining 25 per cent of the catch represents the quantity marketed directly by the fishermen—either as fresh or domestically prepared. Table 10 gives the values of the various items for the years 1935 to 1937.

10. Quantity and Value of Materials Used in Fish Canning and Curing Establishments, 1935, 1936 and 1937

Materials	1935		1936		1937	
	Quantity	Value	Quantity	Value	Quantity	Value
		$		$		$
Fish ..... cwt.	6,237,719	10,958,895	7,786,296	11,916,080	7,431,030	12,179,219
Edible oils ..... gal.	(b)	–	178,208	137,144	182,171	133,998
Salt ..... cwt.	427,867	212,554	535,326	256,651	406,340	208,510
Containers	–	3,152,924	–	3,672,437	–	3,353,174
Other materials	–	448,349	–	477,626	–	443,880
Total	–	**14,772,722**	–	**16,459,938**	–	**16,318,781**

Production.—The value of output of the establishments in 1937 was $26,088,625, of which the value of the manufactured products accounts for $19,032,584, or 73 per cent of the total, and the fish marketed for consumption fresh for $7,056,041, or 27 per cent. Compared with the preceding year the total value shows a reduction of $596,176, or 2 per cent. The principal group, with regard to value of product, comprises the salmon canneries, with a value of $11,060,968 or 42 per cent of the amount recorded for all establishments. Second is the group containing the fish curing establishments, and third is the lobster canning branch of the industry. Among the provinces, British Columbia occupies first place, with Nova Scotia second. The relation which the value of production of the industry in each province bears to the total for Canada is shown, according to percentage, in the following statement: British Columbia, 59; Nova Scotia, 24; New Brunswick, 12; Quebec, 3; and Prince Edward Island, 2. The value of output of the fish canning and curing industry in 1937 represents 82 per cent of the value of the whole product of the sea fisheries, as marketed, while the value of the fish marketed directly by the fishermen, either for consumption fresh, or as domestically prepared, accounts for the remaining 18 per cent.

The following table gives, for each classification of establishment, the value of output, divided between that sold for consumption fresh and the prepared product, in each of the years 1935 to 1937.

11. Value of Production of Fish Canning and Curing Establishments

Description of establishment	1935			1936			1937

General Tables.—A section of the general tabular matter of the report is devoted to the statistics of fish canning and curing establishments, and in this section information regarding capital, employees, salaries and wages, value of production, and other phases, which has been briefly summarized in the foregoing paragraphs, is given in detail, by provinces and by counties or districts.

Review of the Fisheries by Provinces

The following tables (12-18) show by provinces: the total value of the fisheries; the quantity caught and landed and the value marketed of the chief commercial fishes; the quantity and value of all fish caught and landed and marketed; the total values for counties or districts of sea fish caught and landed and marketed; the quantity of sea fish taken offshore; the capital equipment; and the number of employees.

12. Value of Fisheries by Provinces, 1933-1937, in Order of Value, 1937

Province	1933	1934	1935	1936	1937	Increase or decrease 1937 compared with 1936 Inc. + Dec. −	
	$	$	$	$	$		$

FISHING BOUNTY

Under the authority of "An Act to Encourage the Development of the Sea Fisheries and the Building of Fishing Vessels" the sum of $160,000 is appropriated annually by the Governor in Council. It is distributed under the name of Fishing Bounty by the Department of Fisheries amongst fishermen and fishing vessel and boat owners on the Atlantic coast, under regulations made from time to time by the Governor in Council.

For the year 1937, payment was made on the following basis:—

To owners of vessels entitled to receive bounty—$1 per registered ton; payment to the owner of any one vessel not to exceed $80.

To vessel fishermen entitled to receive bounty—$7.60 each.

To owners of boats measuring not less than 12 feet keel—$1 per boat.

To boat fishermen entitled to receive bounty—$6.90.

The total amount paid in 1937 was $159,857.25, allocated as follows:—

To 541 vessels and their crews.....	$ 33,457.60
To 9,981 boats and their crews.....	$ 126,399.65

FOREIGN TRADE

Exports.—The value of exports of Canada's fish and fish products in 1937 was $28,902,152, an increase over the preceding year of $3,504,050, or 14 per cent, and an increase over 1935 of $4,042,666, or 16 per cent. The principal customers are the United Kingdom and the United States, the value of exports to the former country amounting to $6,721,764, or 23 per cent of the total, while exports to the latter country were valued at $14,004,575, or 48 per cent. The exports to all countries within the British Empire, combined, give a total value of $11,178,572, and to foreign countries a total of $17,723,580, the exports to the United States accounting for 79 per cent of this latter figure. The trade tables record a total of 84 countries which received shipments of Canadian fish and fish products in 1937. The largest single items of export were canned salmon ($7,533,648), fresh lobster ($2,438,400), canned lobster ($1,984,167), fresh and frozen salmon ($1,652,145), fresh and frozen whitefish ($1,605,862), and dried cod ($1,210,661). The export trade in canned salmon is world-wide, with record of shipments in 1937 to 66 countries: chief among these are the United Kingdom (196,729 cwt.), Australia (144,809 cwt.), France (59,212 cwt.), the United States (55,975 cwt.), and British South Africa (35,510 cwt.). The chief countries of destination for the exports of canned lobster are the United Kingdom, the United States and France, and for dried cod, the West Indies and the United States. The export of fresh and frozen fish is chiefly to the United States.

Imports.—Canada's importation of fish and fish products is relatively small. In 1937 the imports had a total value of $2,877,131, a decrease from the preceding year of $41,120. The main items of import are cod liver oil ($369,109), sardines ($319,202), oysters ($275,345) and crabs or clams ($225,011).

HISTORICAL REVIEW

The five tables following will afford a review of the fishing industry of Canada for the past several years. In the case of production, returns are given, by provinces, back to 1870. In the case of the number and value of vessels, boats, etc., the review extends to 1880, and in the case of the number of employees to 1895.

20. Table for Conversion of Weights of Fish

Fresh fish in this table in the case of cod, haddock, hake and cusk, pollock and halibut (Atlantic) means fish with the head on and the entrails removed. The weight of halibut on the Pacific coast is to be the weight minus head and entrails. In the case of swordfish and tuna, it means fish with the head, tail and entrails removed. In other cases, fresh fish means fish as it comes from the water.

COD, HADDOCK, HAKE AND CUSK OR POLLOCK

300 lb. of fresh produce one cwt. of fresh fillets.
160 lb. of fresh produce one case of canned.
200 lb. of fresh produce one cwt. of green salted.
300 lb. of fresh produce one cwt. of smoked fillets.
200 lb. of fresh produce one cwt. of smoked.
300 lb. of fresh produce one cwt. (100 lb.) of dried.
400 lb. of fresh produce one cwt. of boneless.

HERRING

70 lb. of fresh produce one case of canned.
200 lb. of fresh produce one cwt. of smoked.
300 lb. of fresh produce one barrel of pickled.
200 lb. of fresh produce one barrel of bait (fresh or salted).
200 lb. of fresh produce one barrel of fertilizer.
125 lb. of fresh produce one cwt. of dry salted.

MACKEREL OR SHAD

70 lb. of fresh produce one case of canned.
300 lb. of fresh produce one barrel of pickled.
400 lb. of fresh produce one barrel of salt mackerel fillets.

SARDINES

One barrel of fresh produces 4 to 5 cases canned.
(One case of 25 lb. equals 100 tins $\frac{1}{4}$ lb. each.)

PILCHARDS

70 lb. of fresh produce one case of canned.
200 lb. of fresh produce one barrel of bait.

ALEWIVES

200 lb. of fresh produce one cwt. of smoked.
275 lb. of fresh produce one barrel of pickled.

SALMON

84 lb. of fresh (Pacific) produce one 48-lb. case canned.
70 lb. of fresh (Atlantic) produce one 48-lb. case canned.
170 lb. of fresh produce one cwt. of smoked.
125 lb. of fresh produce one cwt. of dry salted.
150 lb. of fresh produce one cwt. of mild cured.
150 lb. of fresh produce one cwt. of pickled.

TUNA

100 lb. of fresh produce one case canned.

SQUID

One barrel weighs 250 pounds.

CLAMS

One barrel of fresh produces one case of canned. (48 tins of 6 oz. of clam meat each.)

LOBSTERS

200 lb. of fresh produce one case of canned. (48 tins of 12 oz. lobster meat each.)
500 lb. of fresh produce one cwt. of lobster meat.

(a) For the districts the values as marketed are given.

NOTE.—In the years 1935 and 1936, Lakes Nipigon and Nipissing were shown in the statistical report as being included in the sub-district "Inland Waters—Lake Nipigon, Lake Nipissing, Lake Simcoe, etc., including Ottawa River." This was incorrect and the name of these two lakes should have been included in the sub-district "Lake of the Woods and inland waters of Kenora and Rainy River districts" in which sub-district their catches were shown.

NOTE: For the years 1935 and 1936, Lakes Nipigon and Nipissing were shown in the statistical report as being included in the sub-district "Inland waters—Lake Nipigon, Lake Nipissing, Lake Simcoe, etc., including Ottawa River". This was incorrect and the name of these two Lakes should have been included in the sub-district. "Lake of the Woods and inland waters of Kenora and Rainy River districts" in which sub-district their boats and gear were shown.

III. (3) Statement showing the Exports of Dried Cod from the Chief Exporting Countries during the years 1935, 1936 and 1937

(Quantities in hundredweights of 100 lbs.)

Country	1935	1936	1937
	cwt.	cwt.	cwt.
Newfoundland (a)	1,365,045	1,381,202	1,081,583
Iceland (b)	860,081	607,500	574,629
Norway (c)	1,258,058	1,231,660	1,596,192
Canada	291,569	213,444	205,992
United Kingdom	218,906	246,712	273,045

(a) Year ended June 30.
(b) The Icelandic figures comprise:
In 1935: 856,730 cwt. klipfish and 3,351 cwt. stockfish.
In 1936: 595,132 cwt. klipfish and 12,368 cwt. stockfish.
In 1937: 555,780 cwt. klipfish and 18,849 cwt. stockfish.
(c) The Norwegian figures comprise—
In 1935: 772,109 cwt. klipfish and 485,949 cwt. stockfish.
In 1936: 794,825 cwt. klipfish and 436,835 cwt. stockfish.
In 1937: 851,437 cwt. klipfish and 744,755 cwt. stockfish.

The following statement, prepared from Canadian fisheries statistics for the year shows the catches by Canadian fishermen in 1937 in certain areas, defined by the North American Council on Fishery Investigations, an international body representative of Canada, United States, Newfoundland and France for the co-ordination of fishery investigations in the Atlantic waters of the Continent. The boundaries of the areas are indicated on the accompanying chart.

III. Miscellaneous—(9) Fisheries Production in 1937 in Certain Areas Defined by the North American Council on Fishery Investigations

Kind of Fish	Area No. 19	Area No. 20	Area No. 21	Area No. 22	Total

PRÉFACE

Ce rapport est publié en vertu d'une entente établissant la coopération en matière de statistique entre le Bureau Fédéral de la Statistique et les différents services gouvernementaux ayant juridiction sur les pêcheries canadiennes. Ces services comprennent le ministère fédéral des Pêcheries, qui exerce sa juridiction sur les pêcheries des Provinces Maritimes, du Yukon, de la Colombie Britannique et des îles de la Madeleine, et les divisions des Pêcheries des provinces d'Ontario, Québec, Manitoba, Saskatchewan et Alberta, qui régissent les pêcheries de leurs provinces respectives, sauf les pêcheries des îles de la Madeleine, en Québec, lesquelles sont sous la juridiction du ministère des Pêcheries du Dominion. La Colombie Britannique possède une division des Pêcheries, mais cet organisme ne s'occupe pas de statistique pour son propre compte.

En vertu de l'arrangement dont il est parlé plus haut, les statistiques du poisson pêché et des produits offerts en vente à l'état frais ou après une préparation sommaire, sont recueillies par les fonctionnaires locaux du ministère des Pêcheries, vérifiées et condensées au ministère des Pêcheries, puis compilées au Bureau Fédéral de la Statistique. En ce qui concerne le poisson industriellement préparé et ses sous-produits, des formules similaires à celles en usage dans le recensement des autres branches de la production sont envoyées directement par le Bureau aux usines poissonnières, les fonctionnaires des services des Pêcheries s'assurant que ces formules sont consciencieusement remplies et promptement retournées. Les fonctionnaires des gouvernements provinciaux voudront bien accepter nos remerciements pour le concours qu'ils nous ont prêté.

R. H. COATS,

Statisticien du Dominion.

Bureau fédéral de la statistique,

Ottawa, le 12 octobre 1938.

LES PÊCHERIES DU CANADA

Le début des pêcheries.—*La pêche est une des plus anciennes industries du Canada. Laissant de côté les traditions et les légendes pour s'en remettre aux faits établis, il faut admettre que c'est à Cabot que revient l'honneur d'avoir découvert, en 1497, les bancs de morue de Terre-Neuve, quand il vit pour la première fois la terre ferme de l'Amérique du Nord. Il rapporta que la mer y était si poissonneuse qu'il était possible de pêcher "avec un panier dans lequel il y avait une pierre pour le faire plonger." Cap-Breton, l'un des plus anciens noms géographiques de l'Amérique, est un souvenir des premiers pêcheurs français que les Espagnols et les Portugais ne tardèrent pas à suivre. Fernandez de Navarette nous apprend que des pêcheurs de ces trois nationalités fréquentaient le Grand Banc en 1502. La pêche se pratiquait au moyen de lignes à main passées sur des barils fixés à l'extérieur du passavant pour éviter le contact des lignes avec les flancs du navire; les bateaux de pêche se livraient à leurs opérations tant que durait le beau temps, puis s'en retournaient en France avec leurs prises de 30,000 à 50,000 morues. Les voyages entrepris le long du littoral démontrèrent bientôt que la morue était aussi abondante en vue du rivage que sur les bancs lointains, et les équipages s'accoutumèrent alors à jeter l'ancre dans une baie, à construire une hutte sur la grève et à faire dans leurs petites chaloupes des excursions quotidiennes dont le produit était salé et séché à terre, puis expédié en France à la fin de la saison. Lorsqu'il remonta le Saint-Laurent en 1534, Jacques Cartier trouva partout les traces du passage de ces "capitaines courageux" et de leurs rivalités, lesquelles s'exerçaient aussi bien dans des rencontres armées que dans la capture du poisson qui les avait attirés si loin de chez eux. Chauvin fonda un établissement de cette sorte à Tadoussac, en 1599. Bientôt après les pêcheurs s'habituèrent à passer l'hiver en Amérique et à y construire de véritables villages. La première concession de pêche fut octroyée par le roi de France à de Monts, en 1603. On peut donc considérer la pêche comme la première industrie à laquelle se soient livrés systématiquement les Européens au Canada; depuis ces temps lointains elle n'a jamais cessé de donner sa récolte annuelle.*

Lieux de pêche du Canada.—*Les pêcheries canadiennes sont probablement les plus vastes de l'univers. Sur l'Atlantique, depuis Grand Manan jusqu'au Labrador, le rivage mesure plus de 5,000 milles, à l'exclusion des anses et échancrures qui le dentellent. La baie de Fundy avec 8,000 milles carrés, le golfe Saint-Laurent dix fois plus grand, et d'autres eaux océaniques représentent ensemble environ 200,000 milles carrés, c'est-à-dire plus des quatre cinquièmes des pêcheries du nord de l'Atlantique. De plus, l'on compte sur les bords de l'Atlantique 15,000 milles carrés d'eaux territoriales sous le contrôle absolu du Dominion. Mais ces vastes étendues ne représentent qu'une partie des eaux canadiennes. Sur le Pacifique, le littoral canadien mesure 7,180 milles; ses baies et fiords innombrables offrent aux pêcheurs une multitude d'abris très sûrs. Enfin, disséminés sur tout le territoire s'égrènent une série de lacs qui, tous ensemble, contiennent plus de la moitié des eaux douces du globe, la part du Canada dans les Grands Lacs seulement couvrant plus de 34,000 milles carrés, auxquels viennent s'ajouter le lac Winnipeg (9,457 milles carrés), le lac Manitoba et de nombreux autres non moins vastes.*

Mais la qualité des produits des pêcheries canadiennes est encore plus remarquable. Chacun sait que l'excellence de la chair du poisson est en proportion directe de la pureté et de la fraîcheur des eaux qu'il habite. Considérés sous cet angle, le saumon, la morue, le flétan, le hareng, le maquereau et le corégone du Canada n'ont pas de rivaux dans l'univers. Il est donc évident que les plus magnifiques pêcheries de l'hémisphère occidental, sinon du globe, appartiennent au Canada.

Le bref exposé qui précède démontre qu'il est impossible d'envisager les pêcheries canadiennes sous un unique aspect; embrassant tout un continent, elles offrent nécessairement une grande diversité. Laissant de côté la baie d'Hudson et la région subarctique qui s'étend depuis l'Ungava jusqu'à l'Alaska, on peut diviser ainsi qu'il suit les pêcheries canadiennes:

1. Pêcheries de l'Atlantique.—*Elles sont les premières en date et, jusqu'en 1918, elles furent les plus importantes par la valeur de leurs produits. On y prend la morue, le flétan, l'églefin, le hareng, le maquereau, l'éperlan, la sardine, l'espadon, le homard et l'huître. Le golfe et les eaux intérieures des Provinces Maritimes et du Québec sont quelquefois considérés distinctement; mais en les réunissant, la liste ci-dessus s'accroîtrait du saumon, de l'alose, du gasparot, de l'éperlan, du bar d'Amérique, de la petite morue et du maskinongé. Les opérations de pêche sont communément considérées sous deux aspects distincts, la pêche hauturière ou de haute mer et la pêche côtière. Cette dernière se pratique au moyen de petites embarcations le plus souvent automotrices, montées par deux ou trois hommes; on y emploie aussi de petits navires dont l'équipage se compose de quatre à sept hommes. Les engins de pêche le plus fréquemment employés sont les rets à mailles, les lignes à main et les chaluts; d'autre part, on dispose le long du rivage des filets, des seines et des nasses. L'églefin, comme la morue, est un produit de consommation courante; le printemps et l'été ce poisson est ouvert et salé mais la meilleure saison est l'automne, le poisson étant alors expédié frais ou fumé. La pêche en haute mer se pratique au moyen de navires de 40 à 100 tonnes, portant de douze à vingt hommes, qui pêchent surtout dans des doris au moyen de lignes de fond; en outre, on pêche parfois directement des navires au moyen de lignes à main. Les flotilles fréquentent tour à tour les différents bancs de pêche tels que le Grand Banc, le Banc Intermédiaire et le Banquereau. Ces navires, construits sur place, restent quelquefois plusieurs mois en mer; les naufrages sont rares, tant est grande l'habileté de leurs équipages. A leur retour, le poisson, qui a été vidé et salé à bord, est débarqué, lavé et séché. Les Antilles sont le principal débouché de ce produit; aucune autre morue ne pourrait supporter le climat tropical aussi bien que celle préparée par les pêcheurs de la Nouvelle-Ecosse. De grands chalutiers à vapeur, tels que ceux en usage dans la mer du Nord, ont été introduits depuis plusieurs années dans les pêcheries canadiennes du littoral de l'Atlantique. Ces chalutiers se livrent à la pêche presque toute l'année; leurs prises approvisionnent le commerce de poisson frais. En vertu de la loi des pêcheries, les chalutiers doivent être inscrits comme navires britanniques au Canada, appartenir à des gens du Canada et être pourvus d'un permis émanant du ministre des Pêcheries; leurs opérations doivent se restreindre aux eaux situées à 12 milles au moins du littoral.*

La pêche du homard est une autre industrie caractéristique. En 1870, il n'existait que trois homarderies sur le littoral de l'Atlantique; en 1937 on en compte 277, occupant plus de 5,000 personnes; 30,000,000 de homards constituent une prise normale. L'un des constants problèmes de cette industrie, c'est d'assurer l'exécution des dispositions prohibant la capture des jeunes homards et des adultes au moment du frai; on croit qu'avec la coopération des pêcheurs le rendement de cette pêche peut se maintenir. Au Nouveau-Brunswick, la mise en boîte des sardines, qui sont de jeunes harengs et non une espèce distincte, est une industrie comparable en importance à celle du homard, qu'elle a en fait dépassée ces quatre dernières années au point de vue de la valeur. Grâce à l'ostréiculture, que le Gouvernement a développée, l'huître autrefois abondante mais qui avait de beaucoup diminué pendant un certain nombre d'années reprend sa position importante de jadis. On a mis du naissain dans les endroits favorables des eaux de l'Ile du Prince-Edouard et de la Nouvelle-Ecosse. Ce travail est dirigé par des experts en ostréiculture.

Les pêcheurs des Provinces Maritimes constituent une population industrielle spécialisée. La pêche côtière s'y pratique d'avril à novembre et même en janvier dans les districts abrités et, quoique les plus grands navires travaillent pendant tout l'hiver, plusieurs milliers d'hommes sont disponibles à certains moments de l'année pour d'autres travaux. Les uns cultivent des parcelles de terre entourant leurs maisons, les autres travaillent dans les chantiers de bois du Nouveau-Brunswick ou bien dans les charbonnages de la Nouvelle-Ecosse. Quelques pêcheurs de Lunenburg et d'ailleurs font du négoce avec les Antilles. Outre les restrictions imposées par la température et les saisons fermées, la méthode généralement répandue de payer les hommes au tantième tend encore, les années où la prise et les prix sont faibles, à les attirer vers les occupations secondaires.

2. Pêcheries intérieures.—*Les Grands Lacs et les eaux tributaires du St-Laurent constituent une seconde grande division des pêcheries canadiennes. La valeur des pêcheries intérieures du Québec se compose principalement de produits de la pêche à l'anguille, au doré et à l'esturgeon. En Ontario, le corégone, la truite, le doré et le hareng des lacs sont les poissons les plus importants, commercialement parlant, quoique le brochet, l'esturgeon et quelques autres poissons ne soient pas à dédaigner. Dans les Grands Lacs la saison de pêche dure de six à huit mois; quelques pêcheurs continuent leurs opérations durant l'hiver en creusant des trous dans la glace, mais le plus grand nombre cherchent une autre occupation dans l'intermède des saisons. En se dirigeant plus à l'ouest le lac Winnipeg, le lac Winnipegosis, le lac Manitoba et des lacs plus petits au nord et à l'est de celui-ci fournissent la plupart des poissons du Manitoba. Le corégone et le doré sont les principaux d'entre eux, mais le brochet, le tullibee, l'œil-d'or et nombre d'autres variétés s'y trouvent aussi. En Saskatchewan et en Alberta, la pêche pour le commerce est confinée aux régions situées au nord de la rivière Saskatchewan où l'on prend de grands quantités de corégone. Les difficultés du transport n'ont pas encore été surmontées; quelques-uns des plus grands lacs du continent, les lacs Reindeer, Grand Esclave, Grand Ours et des centaines de lacs plus petits n'ont aucune communication avec les marchés de consommation. Toutefois, les lacs de l'Ouest jouent le même rôle que le St-Laurent au temps du régime français et que les bancs de morue dans l'histoire de la Nouvelle-Angleterre, en facilitant la colonisation du pays, puisqu'ils offrent un aliment certain aux colons nouvellement arrivés.*

3. Pêcheries du Pacifique.—*La Colombie Britannique possède des pêcheries d'eau douce presque similaires à celles de la région des Prairies; il est douteux que le commerce des fourrures (qui devait être l'agent de liaison entre cette province et le reste du Canada à travers les Montagnes Rocheuses) eût pu s'établir au commencement de l'histoire de cette province si ces pêcheries n'eussent pas existé. Les pêcheries de la Colombie Britannique sont d'une grande richesse; elles représentent environ les deux cinquièmes de l'industrie poissonnière du Canada et ses produits se consomment jusqu'aux extrémités de la terre; ils sont essentiellement constitués par le saumon pêché à l'embouchure du fleuve Fraser, de la Skeena, de la Naas et d'autres rivières qui descendent le versant occidental des montagnes. Chacune des variétés de ce roi des poissons comestibles (qui toutefois n'est pas le* salmo salar *ou vrai saumon) fréquentant les eaux du Pacifique se trouve sur le littoral de la Colombie Britannique, c'est-à-dire le sockeye ou dos bleu, le saumon de printemps, le saumon argenté, le saumon rose et le saumon bécard. Entre tous ceux-ci, le dos bleu, bien qu'il ne donne pas d'aussi fortes prises que le saumon rose et le bécard, est de beaucoup le plus important, en raison de l'excellence de sa chair, dont la belle couleur rougeâtre est tant appréciée des consommateurs de la Grande-Bretagne et des pays étrangers. Le fleuve Fraser était autrefois la principale source d'approvisionnement de saumon, mais sa production est aujourd'hui dépassée par celle de la rivière Skeena et de ses tributaires septentrionaux; la prise varie considérablement d'année en année. La montée du saumon commence vers la fin de juillet et atteint son apogée dans les premières semaines d'août; néanmoins, les régions septentrionales ont une saison plus hâtive. Le saumon de printemps ou quinnat est un très gros poisson, c'est la première espèce qui fut mise en boîte aux Etats-Unis; la migration de ce poisson s'opère au commencement du printemps et se continue jusqu'en juillet. Le saumon argenté est plus petit; comme le dos bleu, il voyage par bandes innombrables, pendant septembre et octobre, dans le fleuve Fraser, et un peu plus tôt dans les cours d'eau plus au nord. Le saumon bécard est mis en boîte et une quantité considérable est salée pour l'exportation en Orient. Le saumon rose, lui aussi, suit le dos bleu. Le plus grand nombre de personnes qu'occupe cette pêche sont des Chinois, des Japonais et des Indiens, les Chinois étant employés dans les usines, tandis que les Indiens et les Japonais se consacrent plutôt aux opérations de pêche.*

Le flétan abonde à hauteur de l'île Vancouver et entre les îles de la Reine Charlotte et le continent; quoique la première tentative d'exploitation industrielle de ce poisson ait avorté, dès 1903 la Colombie Britannique contribuait pour 10,000,000

de livres à la production de 25,000,000 de livres pêchées sur le littoral du Pacifique, au nord de la Californie, chiffre qui a triplé depuis plusieurs années, bien que depuis 1930 cette pêche ait diminué à la suite des restrictions imposées en vertu des dispositions du traité conclu entre le Canada et les Etats-Unis pour la conservation de ces pêcheries. La quantité de hareng prise annuellement par les pêcheurs de la Colombie Britannique représente plus de 60 p.c. de la prise totale de hareng de mer dans le Dominion et elle est surtout employée à la préparation de produits salés à sec (pour exportations à la Chine et au Japon) et à la production d'huile et de poudre. Le pilchard, qui est de la famille du hareng et pour lequel les rapports au Canada n'ont trait qu'à la prise du littoral du Pacifique, occupe le quatrième rang parmi les principaux poissons de commerce de la Colombie Britannique. La production de pilchard en boîte est considérable, mais les principaux item de production de la pêche sont l'huile et la poudre. On y pêche aussi la baleine et deux stations sont en opération dans les îles de la Reine Charlotte. On y pêche des cétacés de différentes sortes; baleines franches, rorquals, dauphins et cachalots. La pêche à la baleine se pratique dans des bateaux rapides armés de canons lance-harpon Svend Foyn, système venu de Norvège. Aucune partie de la baleine ne se perd, l'huile et la poudre ou engrais en sont les produits les plus importants. Le cabillaud, la lingue, l'oulachon, le turbot, la raie, la sole, la coque et l'huître sont également abondants dans les eaux de la Colombie Britannique.

Il convient d'ajouter un mot concernant les pêcheries de phoque à fourrure du Pacifique dont le siège historique était autrefois à Victoria. Au début du siècle actuel, par suite de la raréfaction des animaux, cette industrie n'avait plus qu'une bien faible importance, et en 1911 un traité fut conclu entre la Grande-Bretagne, les Etats-Unis, le Japon et la Russie, à l'effet d'interdire la pêche pélagique ou hauturière. Ce traité, qui est resté en vigueur, a pour objet la conservation du phoque et il en est résulté un accroissement considérable des bandes de ces animaux. A titre de compensation pour la renonciation à ses droits de pêche au phoque, le Canada touche annuellement des gouvernements des Etats-Unis, du Japon et de la Russie une part du revenu de la pêche du phoque aux îles Pribaloff et à d'autres endroits, appartenant à ces trois pays, où se trouvent des colonies de phoques. Les Indiens de la Colombie Britannique sont exempts des dispositions de ce traité, mais ils ne peuvent pratiquer ce genre de chasse qu'à l'aide de bateaux non pontés, dont chacun ne peut avoir un équipage de plus de cinq personnes, l'emploi d'armes à feu leur étant interdit.

Le sport de la pêche.—*Le relevé ci-dessus est purement industriel et commercial; mais le sport de la pêche comporte un aspect économique dans un pays où foisonnent des poissons aussi réputés que le saumon de la Restigouche et autres rivières du Nouveau-Brunswick, l'achigan et la truite mouchetée du Québec et des hautes terres d'Ontario, la truite rouge du Nipigon et le saumon et la truite arc-en-ciel de la Colombie Britannique. Le gouvernement perçoit des revenus fort élevés en louant soit à des clubs, soit à des particuliers, le droit de pêche dans les lacs et les cours d'eau des contrées les moins peuplées; d'autre part, des centaines de guides y trouvent une occupation pendant les mois d'été.*

LE GOUVERNEMENT ET LES PÊCHERIES*

Dès l'organisation du Gouvernement fédéral à la Confédération, le ministère de la Marine et des Pêcheries administrait les pêcheries canadiennes. De bonne heure en 1930 un ministère des Pêcheries, sous la direction d'un ministre, a été organisé. Ce ministère administre maintenant toutes les pêcheries en eau salée (excepté celles de la partie continentale du Québec qui, en vertu d'un accord, relèvent de l'administration provinciale), les pêcheries en eau douce de la Nouvelle-Ecosse et les pêcheries du Yukon et des Territoires du Nord-Ouest. Les pêcheries en eau douce du Nouveau-Brunswick, de l'Ile du Prince-Edouard, d'Ontario, des Provinces des Prairies et de la Colombie Britannique, et les pêcheries du Québec, tant

* Revisé sous la direction de W. A. Found, sous-ministre, ministère des Pêcheries, Ottawa.

en eau salée qu'en eau douce, (excepté celles des îles de la Madeleine) sont administrées par les provinces respectives, bien que le ministère fédéral exécute certains travaux de protection dans les eaux douces du Nouveau-Brunswick, de l'Ile du Prince-Edouard et de la Colombie Britannique. Cependant, le gouvernement fédéral possède seul le droit de légiférer sur les pêcheries. (Voir la loi des pêcheries, 22-23 Geo. V, c. 42.) L'année fiscale 1937-38 les dépenses du Dominion pour les pêcheries, y compris les salaires du gouvernement civil, les contingences, etc., sont de $2,162,111 et les revenus, de $119,824.

Conservation.—*Les pêcheries fluviales et lacustres incontestablement, et les pêcheries maritimes probablement, si elles étaient abandonnées à elles-mêmes, subiraient la loi économique de l'appauvrissement. Pour combattre cette tendance le gouvernement canadien dut légiférer, interdisant la pêche en certaines saisons, la pollution des rivières et l'obstruction de leur cours; il dut aussi spécifier les dimensions des mailles de filets, réglementer les agrès et les opérations de pêche. En outre, un vaste système de pisciculture a été organisé. En 1937 le Dominion a exploité 16 frayères, 7 viviers auxiliaires, 3 aleviniers, 8 bassins à saumon et plusieurs stations de cueillette des œufs, ayant coûté $218,055 et ayant distribué 61,831,780 alevins et poissons des espèces saumon et truite. Ces alevins sont distribués gratuitement si les eaux où ils doivent être placés sont convenables et accessibles au public pour la pêche. Le ministère fédéral des pêcheries poursuit depuis 1929 des recherches et des expériences en ostréiculture à la baie Malpeque, Ile du Prince-Edouard; elles s'étendent maintenant à certaines régions de la Nouvelle-Ecosse.*

Aide directe.—*Sur la côte de l'Atlantique où les conditions qui accompagnent les opérations de la pêche rendent un tel service désirable, il a été établi un système de radio qui émet des rapports sur les probabilités de température, les approvisionnements de boitte et de glace et les conditions de la glace. En outre, sous l'empire de la loi de l'inspection du poisson (S.R.C., 1927, c. 72) des systèmes d'instruction sur les nouvelles méthodes de saurissage et de fabrication des barils ont été en opération pendant plusieurs années.*

Le Parlement a voté la somme de $300,000 qu'il a mise à la disposition du ministère des Pêcheries pour l'année fiscale 1937-38 afin d'aider, en coopération avec les provinces concernées, au rétablissement des pêcheurs nécessiteux. Quatre provinces où les pêcheries sont administrées en tout ou en partie par le fédéral—la Nouvelle-Ecosse, le Nouveau-Brunswick, l'Ile du Prince-Edouard et le Québec—ont conclu des accords avec les autorités fédérales pour réaliser l'objet de cet article du budget. Dans chacune des quatre provinces le ministère des Pêcheries a fait des déboursés deux fois plus considérables que ceux des gouvernements provinciaux pour aider directement les pêcheurs nécessiteux; les dépenses totales sur le crédit alloué au ministère se sont élevées à $218,004. Dans les Provinces Maritimes et aux îles de la Madeleine des prêts ont été faits aux pêcheurs et aux associations de pêcheurs; 9,176 pêcheurs et 28 associations de pêcheurs ont joui de ces prêts.

Dans un autre effort pour venir en aide aux pêcheurs—il s'agissait en l'occurence d'accroître la demande de leurs produits—le ministère des Pêcheries a continué de faire une vaste réclame au cours de l'année fiscale. La publicité a surtout été faite dans le Dominion, mais $15,000 ont été dépensés au Royaume-Uni dans le but d'augmenter principalement les ventes de homard et de saumon canadiens en boîte. Au Canada des publications diverses ont été distribuées en grand nombre pendant la campagne, qui s'est étendue à toutes les parties du pays et qui attirait l'attention sur la valeur des produits canadiens de la pêche en général.

Recherches scientifiques.—*A Halifax, N.-E., St. Andrews, N.-B., Nanaimo et Prince-Rupert, C.B., et dans le comté de Gaspé, Québec, se trouvent des stations sous la direction du Conseil de recherches sur les pêcheries, autrefois le Conseil de biologie, pour l'étude des nombreux problèmes complexes inhérents aux pêcheries. Les stations de St. Andrews et de Nanaimo s'occupent principalement*

des problèmes de pisciculture et les stations expérimentales d'Halifax, de Prince-Rupert et du comté de Gaspé consacrent leur attention aux problèmes de l'industrie poissonnière. A Ellerslie, Ile du Prince-Edouard, se trouve une station biologique marine s'occupant d'ostréiculture, et une sous-station, à Cultus-Lake, Colombie Britannique, s'occupe tout spécialement de recherches concernant le saumon. Le Conseil de recherches sur les pêcheries emploie un personnel permanent de techniciens. Les habitudes et coutumes des poissons comestibles, la bactériologie du poisson frais ou conservé, l'amélioration des méthodes de manutention et de préparation du poisson, et de nombreux autres problèmes pratiques ont fait le sujet d'importants mémoires et rapports scientifiques.

Problèmes internationaux.—*Des problèmes d'importance internationale concernant les pêcheries ont surgi de temps en temps sur les deux littoraux du Dominion, de même que dans la région des Grands Lacs où les problèmes sont compliqués par le nombre de gouvernements des Etats concernés. La question des privilèges des Etats-Unis dans les pêcheries canadiennes de l'Atlantique a été un problème international important. L'esquisse historique de cette question se trouve aux pages 233-234 de la* Statistique des Pêcheries, 1935. *Depuis 1933, en vertu de l'ancien système de* modus vivendi, *résultat du traité non ratifié de 1888, les vaisseaux des Etats-Unis ont encore reçu la permission d'entrer dans les ports canadiens pour acheter de la boitte et tous autres approvisionnements.*

Le Canada et les Etats-Unis ont pris ces dernières années des mesures conjointes pour traiter deux importants problèmes concernant les pêcheries du littoral du Pacifique—le premier est la protection de la pêche du flétan dans le Pacifique septentrional; l'autre est la protection, la préservation et l'extension des pêcheries de saumon sockeye dans le système du fleuve Fraser.

Le premier traité concernant les pêcheries de flétan a été signé le 2 mars 1923. En vertu de ce traité, la pêche du flétan est interdite pendant un certain temps chaque année et une commission internationale a été établie pour faire une enquête sur la pêche et l'histoire vitale du flétan. Une autre convention, signée à Ottawa le 9 mai 1930 et ratifiée par les gouvernements respectifs le 9 mai 1931, pourvoit à la réglementation de la pêche par la commission en divisant en zones de pêche les eaux visées par la convention, en changeant les dates des saisons prohibées, etc. Une nouvelle convention a été signée à Ottawa le 29 janvier 1937, étendant les pouvoirs de réglementation de la commission. Les mesures prises par la commission internationale en vertu des diverses conventions ont eu pour résultat d'améliorer continuellement l'état des pêcheries de flétan dans les eaux concernées.

La convention relative aux pêcheries de saumon sockeye a été signée à Washington le 26 mai 1930, mais l'échange de ratifications n'a pas eu lieu avant le 28 juillet 1937, bien que le Parlement canadien eût approuvé le traité plusieurs années avant cette date. Les eaux visées par la convention comprennent non seulement la ligne de partage des eaux du fleuve Fraser en Colombie Britannique, mais aussi certaines eaux canadiennes, américaines et internationales formant les abords du Fraser et où passe le sockeye du fleuve Fraser.

En vertu du traité relatif au sockeye, la Commission internationale des Pêcheries du saumon dans le Pacifique a été établie en 1937 et comprend trois membres nommés par le Canada et un nombre égal nommé par les Etats-Unis. La commission qui a établi son siège à New-Westminster, C.B., est autorisée par la convention à faire "une étude complète de l'histoire naturelle du saumon sockeye du fleuve Fraser, des méthodes de pisciculture, des conditions des frayères et autres sujets qui s'y rattachent", à diriger les activités de la culture du saumon sockeye dans les eaux visées par le traité et à recommander aux gouvernements "l'enlèvement ou tout autre moyen de faire disparaître les obstacles qui empêchent le saumon sockeye de remonter les cours d'eau désignés par la présente convention. . ." La convention a également donné à la commission certains pouvoirs de réglementation, mais l'une des ententes

conditionnant l'approbation du traité par les deux pays veut que "La commission ne doit pas promulguer ou mettre en vigueur des règlements avant que les recherches scientifiques prévues dans la convention n'aient couvert deux cycles de montée du saumon sockeye, soit huit ans".

Primes.—*Une loi de 1882 (45 Vict., c. 18), pour le développement des pêcheries maritimes et l'encouragement à la construction des navires de pêche, a consacré une somme annuelle de $150,000, représentant l'intérêt sur le montant de la sentence arbitrale d'Halifax, à la distribution de primes aux pêcheurs et aux propriétaires de bateaux de pêche sur l'Atlantique et à leurs équipages. Une autre loi, votée en 1891 (54-55 Vict., c. 42) éleva ces primes à $160,000, les détails de leur distribution étant réglés chaque année par arrêté ministériel.*

INDUSTRIE MODERNE

L'industrie de la pêche commerciale au Canada a commencé à prendre de l'expansion dans la dernière moitié du XIXe siècle. En 1844, la valeur estimative des prises n'était que de $125,000. Elle doubla dans la décade suivante et, dès 1860, elle dépassait $1,000,000. Dix ans plus tard elle atteignait $6,000,000, chiffre plus que doublé en 1878. En 1900 elle avait atteint un total de $21,000,000 et l'augmentation s'est continuée avec peu d'interruption jusqu'en 1918, alors qu'elle toucha la cime de $60,000,000. Depuis lors, il y a eu des diminutions, mais elles sont attribuables à l'abaissement des prix plutôt qu'à une réduction de la prise. En 1937 la valeur s'établit à $38,976,294. Il est entendu que ces chiffres représentent la valeur totale du poisson vendu soit frais, soit séché, soit en conserve ou autrement préparé. Le nombre d'employés a augmenté en même temps en proportion égale. Il s'est élevé à plus de 90,000 certaines années. Le capital engagé s'est élevé d'ailleurs jusqu'à $64,000,000. En 1937 le nombre d'employés est de 84,025 et le capital immobilisé est de $44,926,764.

Entre tous les poissons, la morue de l'Atlantique et le saumon du Pacifique se disputèrent longtemps la primauté mais depuis 1895 le saumon tient définitivement la première place et la quantité de homard et son prix élevé ont plus d'une fois, ces dernières années, relégué la morue au troisième rang. La valeur de la production de la pêche du saumon de 1869 à 1937 est d'environ $474,000,000 et celle de la pêche de la morue, de $293,000,000. Cela a modifié, bien entendu, le rang des provinces entre elles, la Colombie Britannique occupant maintenant la première place qui appartenait auparavant à la Nouvelle-Ecosse.

COMMERCE

La consommation domestique (a) de poisson est relativement faible au Canada et le commerce dépend largement des marchés étrangers. On peut évaluer approximativement à 60 ou 70 p.c. des prises annuelles la portion exportée, dont les Etats-Unis absorbent environ un tiers et le Royaume-Uni, un quart. L'année civile 1937 les exportations totales s'élèvent à $28,902,152, dont $14,004,575 vont aux Etats-Unis et $6,721,764, au Royaume-Uni. Une autre division révèle que $11,178,572 vont aux pays de l'Empire Britannique et $17,723,580, aux pays étrangers. Le plus important des poissons exportés est le saumon en boîte (expédié au Royaume-Uni et aux marchés européens), suivi par le homard frais, le homard en boîte, le saumon frais, le corégone frais et la morue séchée (aux Antilles et en Amérique du Sud, etc.). Pour le poisson frais, les Etats-Unis constituent le principal débouché. En 1937 les importations canadiennes de poisson s'élèvent à $2,877,131.

(a) Voir le paragraphe intitulé "Aide directe", à la p. 238 pour renseignements sur l'œuvre entreprise par le gouvernement fédéral dans le but d'augmenter la consommation de poisson du Canada et d'étendre les marchés à l'extérieur.

STATISTIQUES DES PÊCHERIES DU CANADA, 1937

La valeur globale des produits poissonniers du Canada en 1937 est de $38,976,294, comparativement à $39,165,055 en 1936 et $34,427,854 en 1935. Ces chiffres représentent la valeur de tous les produits tels que mis sur le marché, qu'ils aient été vendus pour consommation à l'état frais ou qu'ils aient subi un traitement ou une transformation quelconques dans une usine ou au domicile des pêcheurs. Le tableau qui suit montre les prises et la valeur marchande des principaux poissons commerciaux (dont la pêche a donné une valeur de $100,000 ou plus) les cinq dernières années, avec une indication dans la dernière colonne de l'augmentation ou diminution en 1937 comparativement à 1936.

1.—Quantité (a) **et valeur** (b) **des principaux poissons commerciaux pêchés au Canada, 1933-1937**

(a) Quantité prise. (b) Valeur des ventes.

(c) Antérieurement à 1934, les totaux concernant le flétan comprenaient les prises débarquées dans des ports de la Colombie Britannique par des vaisseaux des Etats-Unis, alors que depuis 1934 les débarquements américains sont exclus des statistiques, les chiffres se rapportant uniquement aux prises débarquées par des vaisseaux canadiens. Voir renvoi page 140, pour les prises débarquées par des navires américains en 1937.

(d) Comprise avec mactre ou praire antérieurement à 1935.

REVUES DES PÊCHERIES, ANNÉE CIVILE 1937

L'année civile 1937 les pêcheurs commerçants du Canada débarquent 10,918,048 quintaux de poisson, crustacés et mollusques; la prise a une valeur marchande de $38,976,294. En regard des résultats de l'année civile 1936, il y a diminution de 170,231 quintaux dans la prise et de $188,761 dans la valeur marchande. La production des pêcheries maritimes a une valeur marchande de $31,984,047 et la production des pêcheries intérieures, $6,992,247. Ce dernier chiffre représente une augmentation de $778,696, mais la valeur de la prise des pêcheries maritimes est inférieure de $967,457 au chiffre de 1936. La valeur augmente dans la Nouvelle-Ecosse, le Nouveau-Brunswick, l'Ontario, le Manitoba, la Saskatchewan et l'Alberta; mais elle diminue dans la Colombie Britannique, le Québec, l'Ile du Prince-Edouard et le territoire du Yukon.

Grande pêche.—La prise de saumon de l'année surpasse encore en valeur marchande celle de toutes les autres pêcheries du Dominion, bien que la prise de 1,724,213 quintaux soit inférieure de 305,491 quintaux à celle de l'année précédente. La valeur marchande du saumon ($12,370,219) accuse une diminution de $1,497,294. La pêche du homard vient après la pêche du saumon au point de vue de la valeur marchande; elle s'établit à $4,633,429, à rapprocher de $4,383,428 en 1936. La prise de homard, 309,950 quintaux, montre une augmentation de 26,677 quintaux. Selon l'importance de leur valeur marchande viennent ensuite les pêcheries de morue, de hareng et de corégone. Dans le cas de la morue, la prise s'élève à 1,523,626 quintaux ayant une valeur marchande de $3,140,230, diminution de 176,348 quintaux en quantité et de $191,520 en valeur. La prise de hareng s'établit à 3,057,503 quintaux, augmentation de 205,122 quintaux, et sa valeur marchande est de $2,556,883, soit $19,650 de moins qu'en 1936. La prise et la valeur marchande du corégone montrent également une augmentation. La prise totale de corégone, provenant en entier des eaux intérieures, est de 173,675 quintaux, augmentation de 29,072 quintaux. Sa valeur marchande s'élève à $1,887,889, augmentation de $362,189.

Pêcheries maritimes de l'Atlantique

Le tableau suivant donne la prise totale de poissons, de mollusques et crustacés de commerce sur le littoral de l'Atlantique, par province, les années civiles 1936 et 1937:

	1936	1937
	qtx	qtx
Nouvelle-Ecosse	2,650,922	2,703,078
Nouveau-Brunswick	1,586,450	1,377,907
Ile du Prince-Edouard	248,138	275,250
Québec	892,594	715,936
Prises totales	5,378,104	5,072,171

Morue, églefin, merluche et brosmius, et merlan.—En 1937 la prise de toutes ces espèces de poisson sur le littoral de l'Atlantique s'établit à 2,367,209 quintaux, contre 2,449,253 l'année précédente. La valeur marchande de la prise montre une diminution de $113,271; elle s'élève à $4,914,789 comparativement à $5,028,060 l'année précédente. La prise de merlan en 1937 accuse une forte augmentation, approchant les 100 p.c.; elle s'établit à 239,845 quintaux. La prise de merluche et brosmius, 229,225 quintaux, augmente légèrement; mais la production de l'année, tant de la merluche que de la morue, est plus faible qu'en 1936. La prise d'églefin, 388,823 quintaux, montre une diminution de 14,187 quintaux sur celle de l'année précédente; mais la valeur marchande, $1,296,313, augmente un peu. La prise totale de morue est de 1,509,320 quintaux d'une valeur marchande de $3,097,278. Au point de vue production, la diminution est de 182,555 quintaux et, au point de vue valeur, la baisse est de $208,536.

La Nouvelle-Ecosse, qui produit beaucoup plus de morue que toute autre province, voit sa prise augmenter un peu pendant l'année et il y a un faible gain dans l'Ile du Prince-Edouard. D'autre part, il y a une diminution dans le Nouveau-Brunswick; mais la plus grande réduction se produit dans le Québec, qui n'occupe que le deuxième rang après la Nouvelle-Ecosse comme producteur de morue. En 1936 la prise du Québec était de 418,950 quintaux, mais en 1937 elle tombe à moins de 231,864 quintaux. Tout l'églefin, à l'exception de 3,776 quintaux, est capturé par les pêcheurs de la Nouvelle-Ecosse et leur prise est de 6,801 quintaux de moins que l'année précédente. Dans chacune des trois autres provinces de l'Atlantique l'églefin a été pris en plus faible quantité que l'année précédente. Le Nouveau-Brunswick est la seule province qui fait voir une réduction dans la prise de merluche et brosmius.

Dans le Nouveau-Brunswick et la Nouvelle-Ecosse, provinces productrices de merlan, il y a une forte augmentation dans la prise de l'année. Au Nouveau-Brunswick la prise de 1,333,360 quintaux est beaucoup plus que le double de ce qu'elle était en 1936; tandis qu'en Nouvelle-Ecosse la prise est de 106,485 quintaux, comparativement à 75,210. Il s'en faut de peu que la valeur marchande totale du merlan, $222,208, soit le double de celle de l'année précédente.

Production de poisson séché.—Il y a une certaine augmentation dans la production de poisson séché (morue, églefin, merluche et brosmius, et merlan), elle s'établit à 261,285 quintaux comparativement à 234,960 en 1936. La valeur marchande des produits, $1,123,552, montre une augmentation de $133,393. La plus grande partie de poisson séché comprend la morue et la Nouvelle-Ecosse est la plus grande source d'approvisionnement. Au cours de l'année la production de morue séchée est de 189,930 quintaux, indiquant un faible gain sur 1936. La baisse violente dans la production du Québec est une caractéristique adverse. En Nouvelle-Ecosse l'augmentation est importante; au Nouveau-Brunswick l'augmentation est relativement forte. Dans l'Ile du Prince-Edouard il y a une diminution, mais l'industrie du séchage du poisson n'y est pas exploitée sur une grande échelle. La production de morue séchée dans le Québec est moins de la moitié de ce qu'elle était l'année précédente—26,702 quintaux, à rapprocher de 58,209 quintaux. La valeur marchande de la production de morue séchée dans toutes les quatre provinces est de $923,496, soit une augmentation de $41,603. Comme la prise de merlan augmente beaucoup, il y a naturellement augmentation dans la quantité de poisson séché—48,558 quintaux comparativement à 31,158 quintaux. La valeur marchande du merlan séché est de $130,190, augmentation de $58,957. La production de merluche et brosmius séchés baisse au Nouveau-Brunswick, augmente un peu dans l'Ile du Prince-Edouard, mais est bien plus considérable en Nouvelle-Ecosse qu'elle l'a été en 1936. Le résultat net est que la production globale est de 21,470 quintaux comparativement à 13,516 quintaux et la valeur marchande, $65,264, est près de deux fois plus considérable que celle de l'année précédente. La production de merluche séchée accuse une légère augmentation. Pour ce qui est de l'églefin, une quantité comparativement faible seulement est séchée. La production totale de poisson sans arêtes sur la côte, 24,245 quintaux, n'est pas aussi considérable que celle de 1936.

Hareng, maquereau et sardine.—Dans le cas de la pêche du hareng, la prise accuse une augmentation dans le Québec et l'Ile du Prince-Edouard; mais il y a diminution dans le Nouveau-Brunswick, la plus grande productrice de hareng de l'Atlantique, et en Nouvelle-Ecosse. La prise totale de hareng sur la côte, 1,077,472 quintaux, est inférieure à celle de 1936 de 103,365 quintaux. La forte augmentation dans la prise de maquereau du Québec est le principal facteur qui porte la production totale de ces poissons à 239,163 quintaux, soit 12,525 quintaux de plus qu'en 1936. La prise du Québec, 41,840 quintaux, est deux fois et demie plus grande qu'en 1936. Il y a une faible augmentation de la prise de l'Ile du Prince-Edouard, une faible diminution au Nouveau-Brunswick et une baisse assez importante en Nouvelle-Ecosse. La valeur marchande du maquereau atteint le total de $635,740, augmentation de $173,874.

A peu près toute la sardine est capturée dans le sud-ouest du Nouveau-Brunswick et en 1937 la prise s'élève à 158,842 barils, à rapprocher de 246,368 barils l'année précédente. D'autre part, la production de sardine en boîte montre une augmentation, s'élevant à 423,043 caisses comparativement à 393,854 caisses. La valeur marchande de la sardine en boîte est de $1,458,817, augmentation de $77,589.

Turbot, flétan et espadon.—Au cours de l'année la production de turbot enregistre une brusque augmentation, accompagnée d'une hausse de la valeur de la quantité débarquée. Il y a également augmentation dans la prise de flétan; mais la pêche de l'espadon, qui est entièrement faite par les pêcheurs de la Nouvelle-Ecosse, ne rapporte en tout que 15,020 quintaux comparativement à 17,853 en 1936. Comme d'habitude, la plus grande partie de la prise de turbot est faite par les pêcheurs de la Nouvelle-Ecosse. En Nouvelle-Ecosse la prise de ce poisson, 10,445 quintaux, augmente de 3,829. Les chiffres relatifs au turbot dans les autres provinces n'affichent que très peu de changements. La prise de flétan sur l'Atlantique, de beaucoup la plus grande, est également faite par les pêcheurs de la Nouvelle-Ecosse et l'année sous revue ils débarquent quelques quintaux de plus qu'en 1936, soit 31,301 quintaux comparativement à 31,044. La prise du Québec augmente; mais au Nouveau-Brunswick, faible producteur, il y a une diminution.

Saumon et autres poissons frayant dans les rivières.—La prise de saumon au cours de l'année, 30,361 quintaux, est légèrement inférieure à celle de l'année précédente alors que 31,931 quintaux ont été débarqués. La prise s'élève à 15,637 quintaux au Nouveau-Brunswick; 4,647 quintaux en Nouvelle-Ecosse; 10 quintaux dans l'Ile du Prince-Edouard—diminutions dans toutes les trois provinces. Dans le Québec, toutefois, la prise s'établit à 10,067 quintaux comparativement à 9,317. La prise d'éperlan accuse une diminution dans chacune des quatre provinces; au Nouveau-Brunswick, où se fait la plus grande partie de la prise annuelle d'éperlan, la baisse est de 21,155 quintaux. La prise totale sur le littoral est de 66,048 quintaux, à rapprocher de 93,007 quintaux l'année précédente. Il y a également une brusque réduction de la prise de gasparot au Nouveau-Brunswick; bien que la prise de ce poisson fasse voir une augmentation dans la Nouvelle-Ecosse et l'Ile du Prince-Edouard, les deux autres provinces productrices, il en résulte que la prise sur l'ensemble de la côte est de 73,854 quintaux, c'est-à-dire 14,319 quintaux de moins qu'en 1936. Au Nouveau-Brunswick la prise de gasparot donne un total de 43,113 quintaux, contre 61,122. En Nouvelle-Ecosse la prise s'établit à 29,078 quintaux, comparativement à 26,707; dans l'Ile du Prince-Edouard, 1,663 comparativement à 344 quintaux.

Homard.—La pêche du homard, qui ne se fait que dans les eaux du littoral de l'Atlantique, rapporte 309,950 quintaux et montre une augmentation de 26,677 quintaux sur la production de l'année précédente. La valeur marchande totale est de $4,633,429 et fait voir une augmentation de $250,001. L'augmentation nette de la prise est attribuable au fait que la pêche a été plus fructueuse qu'en 1936 dans les eaux de la Nouvelle-Ecosse et du Nouveau-Brunswick. Dans ces deux provinces la prise montre des augmentations brusques: au Nouveau-Brunswick elle augmente de 16,087 quintaux et en Nouvelle-Ecosse, de 13,870 quintaux.

Autres mollusques et crustacés.—Le pétoncle, l'huître et la coque, parmi les autres mollusques et crustacés, sont tous capturés en plus grande quantité en 1937. Il y a une réduction, et elle est faible, dans le cas de la praire seulement, coque à coquille dure. Le Nouveau-Brunswick et l'Ile du Prince-Edouard sont les principaux producteurs de praire; dans la première province il y a une légère diminution au cours de l'année, tandis qu'il y a une augmentation dans l'Ile du Prince-Edouard. La production baisse en Nouvelle-Ecosse. Pour les trois provinces ensemble, la prise de praires s'élève à 2,282 barils comparativement à 2,351 en 1936. La valeur de la prise, $9,217, accuse une faible réduction. Dans le cas de la pêche du pétoncle, qui se fait en majeure partie dans l'ouest de la

Nouvelle-Ecosse, la prise totale, 183,755 gallons (sans coquille) est de 12,993 gallons plus considérable qu'en 1936; mais les prix sont plus faibles que l'année précédente et il en résulte que la valeur marchande totale n'est que de $296,529, à rapprocher de $334,424. L'augmentation de la prise est attribuée entièrement à la Nouvelle-Ecosse. Au Nouveau-Brunswick la prise diminue très brusquement et dans le Québec il y a également une réduction, bien que la pêche du pétoncle ne soit pas importante en cette province.

L'augmentation de la récolte d'huîtres au Nouveau-Brunswick est la cause qui élève la production totale du littoral à 22,355 barils, soit 1,585 barils de plus que l'année précédente. Au Nouveau-Brunswick la prise augmente de 9,109 barils en 1936 à 11,546 barils en 1937. Dans l'Ile du Prince-Edouard la prise est de 6,478 barils, soit 264 barils de moins qu'en 1936. La prise de la Nouvelle-Ecosse, 4,331 barils, accuse une baisse de 588 barils. La valeur marchande totale de la récolte d'huîtres pour l'ensemble du littoral est de $143,880, augmentation de $13,645.

La prise de coques augmente de 4,770 barils au Nouveau-Brunswick et de 1,591 barils dans l'Ile du Prince-Edouard, mais il y a une diminution de 3,438 barils en Nouvelle-Ecosse et de 640 barils dans le Québec. La prise totale de coques sur la côte, 48,197 barils, a une valeur marchande de $144,813. Comparativement à 1936, il y a augmentation de 2,283 barils en volume et de $40,325 en valeur marchande.

Pêcheries du littoral du Pacifique

Au cours de l'année les pêcheurs commerçants de la Colombie Britannique font des prises qui s'élèvent à 4,954,195 quintaux ayant une valeur marchande de $16,155,439. Au point de vue prise, il y a augmentation de 57,442 quintaux sur 1936; mais, dans le cas de la valeur marchande, il y a diminution de $1,076,095. Cette baisse dans la valeur est principalement due à la réduction dans le rendement de la pêche du saumon, qui est la pêche individuelle la plus importante du Dominion.

Saumon.—La prise de saumon est de 1,691,736 quintaux comparativement à 1,995,499 en 1936. Comme la prise diminue, il y a naturellement réduction dans la production de saumon en boîte dans la province. Pour tout dire, la valeur marchande de la production de saumon de l'année est de $11,907,905, à rapprocher de $13,387,344 en 1936. Les diminutions dans la mise en boîte de bécard et de saumon argenté sont les principaux facteurs qui abaissent la mise en boîte de saumon à 1,508,577 caisses, contre 1,881,026 caisses l'année précédente. Il y a en 1937 une réduction assez importante dans la quantité de saumon salé à sec et des diminutions relativement faibles également dans la production d'huile et de poudre de saumon.

Flétan.—La prise de flétan par les pêcheurs de la Colombie Britannique montre encore une augmentation, elle atteint 117,212 quintaux comparativement à 105,918 quintaux en 1936. Au point de vue valeur marchande, il y a augmentation de $150,177, le total de l'année étant de $1,190,056.

Hareng.—La prise de hareng sur le Pacifique accuse une augmentation de 309,170 quintaux au cours de l'année. En 1936 la prise de hareng s'élevait à 1,620,625 quintaux; mais en 1937 elle augmente à 1,929,795 quintaux. Cependant, l'augmentation de la valeur marchande n'est que de $39,069 et la valeur totale s'établit à $1,181,466. Par suite de la perturbation sur les marchés d'Orient, où est vendu tout le hareng salé à sec de la Colombie Britannique, la production des salaisons au cours de l'année, 203,401 quintaux, montre une diminution de 179,936 quintaux. La production de poudre de hareng augmente de 4,342 tonnes et atteint 14,427 tonnes. Il y a une forte augmentation dans la production d'huile de hareng, soit 1,283,658 gallons comparativement à 782,499 gallons en 1936.

Pilchard.—Comme pour le hareng, il y a augmentation dans la prise de pilchard qui est de 961,485 quintaux, soit 72,448 quintaux de plus que l'année précédente. La production d'huile de pilchard passe de 1,217,097 à 1,707,276 gallons. D'autre part, la production de poudre de pilchard diminue de 232 tonnes. La valeur marchande totale de la prise de pilchard pour l'année, $902,619, fait voir une augmentation de $235,306.

Autres pêcheries.—La capture de baleines est moins considérable, soit 317 comparativement à 370 en 1936. Toutefois, la valeur marchande de la prise augmente de $48,050 et s'établit à $220,251. L'augmentation de la valeur est attribuable aux prix plus fermes de l'huile de baleine; la production d'huile n'est que de 662,355 gallons comparativement à 763,740 gallons en 1936, mais la valeur ($197,227) augmente de $52,476. La prise de poisson gris ou roussette, 113,220 quintaux, n'est pas tout à fait aussi considérable que celle de 1936 et il y a des diminutions dans la production de poudre et d'huile. Au point de vue valeur marchande, il y a diminution de $2,929. Il y a une brusque diminution dans la prise de lingue, qui passe de 68,932 quintaux en 1936 à 42,858 quintaux. La production d'huîtres et de coques est plus faible qu'en 1936. La pêche de crabes enregistre une certaine augmentation et la prise de crevettes, qui n'est jamais très considérable, est beaucoup plus grande que l'année précédente. La prise de cabillaud augmente très brusquement, mais il y a diminution dans la prise de morue rouge et de morue de roche.

Pêcheries intérieures

La valeur marchande du produit des pêcheries intérieures accuse une augmentation en 1937. En 1936 la production de ces pêcheries intérieures ou d'eau douce avait une valeur marchande de $6,213,551, tandis qu'en 1937 la valeur est de $6,992,247. Les revenus augmentent dans l'Ontario, le Manitoba, la Saskatchewan, l'Alberta et le Nouveau-Brunswick; mais ils diminuent dans le Québec et le territoire du Yukon. L'Ontario enregistre le plus fort gain, $406,244.

Le corégone est la plus importante espèce de commerce qui se rencontre dans les régions intérieures du Canada et l'on remarque d'après le tableau 1 du présent rapport que la prise en 1937 est beaucoup plus grande que la production moyenne de la période 1933–1936. De la prise totale de corégone l'an dernier, 55,185 quintaux sont capturés par les pêcheurs de l'Ontario, 32,301 quintaux proviennent des eaux du Manitoba, 54,725 de la Saskatchewan et 27,836 de l'Alberta. Dans le Québec la prise de corégone est de 3,535 quintaux. Dans le Nouveau-Brunswick et le territoire du Yukon la production de ce poisson est toujours faible. La prise de l'Ontario en 1937 n'est pas aussi grande que celle de 1936, mais dans chacune des Provinces des Prairies la prise augmente.

La prise de doré, quoiqu'elle ne soit pas aussi considérable qu'en 1936, est beaucoup plus grande qu'en 1935, 1934 ou 1933. Le Manitoba continue d'être le plus grand producteur de la prise totale de doré, soit 104,095 quintaux sur 143,020. La prise de sandre, qui ne se fait que dans les eaux ontariennes, est plus considérable que l'année précédente. En 1936 la prise a été de 68,995 quintaux, tandis qu'en 1937 elle s'élève à 94,496 quintaux.

La prise de truite destinée au commerce, 70,588 quintaux, n'est pas aussi grande qu'en 1936, mais la valeur marchande augmente. L'année précédente la prise de truite valait $840,958, mais l'année sous revue la valeur atteint $1,031,740.

Nota.—La précédente revue des pêcheries canadiennes pour l'année 1937 est publiée grâce à la courtoisie du sous-ministre des Pêcheries, au ministère duquel elle a été préparée.

STATISTIQUES DES PÊCHERIES

Le tableau suivant indique, pour l'ensemble du Canada, tout le poisson pris et mis sur le marché au cours de l'année 1937; les chiffres de 1936 paraissent en regard. Pour chaque espèce, la quantité prise et sa valeur au débarquement sont d'abord données. Viennent ensuite des détails sur la forme sous laquelle chaque espèce a été mise sur le marché, ainsi que la valeur.

2. Quantité et valeur du poisson pêché et mis en vente, Canada, 1936 et 1937

OUTILLAGE-CAPITAL ET EMPLOYÉS

Opérations primaires

Capital.—Les vaisseaux, barques et appareils employés dans les opérations primaires de la prise et du débarquement du poisson en 1937 représentent des immobilisations totales de $26,796,379, dont $21,882,937 pour les pêcheries maritimes et $4,913,442 pour les pêcheries intérieures. Par groupes principaux, le capital se répartit comme il suit: 1,008 vaisseaux valant $4,562,314; 39,477 barques valant $10,431,716; filets, seines et divers engins de pêche, $11,802,349. En regard de l'année précédente, les immobilisations totales montrent une diminution de $462,171, mais une augmentation de $442,997 sur 1935.

Employés.—Le nombre d'hommes employés aux opérations primaires au cours de l'année est de 69,981; le travail ayant trait aux pêcheries maritimes absorbe 55,798 du nombre total et celui des pêcheries intérieures, le reste, soit 14,183. En 1936 le nombre total d'employés était de 71,735, tandis qu'en 1935 il était de 68,557.

Conserveries et saurisseries

Capital.—Le capital immobilisé dans les conserveries et les saurisseries, représenté par les terrains, les bâtiments et la machinerie, les produits et approvisionnements en main, l'argent en caisse, les comptes courants et billets à recevoir, a eu en 1937 une valeur totale de $18,130,385, diminution de $484,207 sur l'année précédente mais augmentation de $985,579 sur 1935.

Employés.—Pendant l'année ces établissements fournissent de l'emploi à 14,044 personnes, comparativement à 15,238 en 1936 et 14,361 en 1935.

Les tableaux 3 à 6 qui suivent montrent en résumé l'outillage-capital et les employés aux opérations primaires et dans les conserveries et saurisseries pour l'ensemble du Canada; d'autres tableaux de l'introduction présentent les statistiques par province, tandis que la Partie II du rapport donne les statistiques par comté et sous-district de pêche.

3. Outillage-capital—Opérations primaires. Valeur des vaisseaux, barques, filets, pièges, môles et quais, etc., employés dans les pêcheries canadiennes, 1935, 1936 et 1937

Détails sur les conserveries et les saurisseries

Nombre d'établissements.—Les établissements en opération en 1937 se chiffrent à 597 et se classifient comme il suit: 277 homarderies, 72 saumoneries, 21 conserveries de mollusques et crustacés, 12 sardineries et conserveries d'autres poissons; 178 saurisseries, 19 glacières et 18 huileries. L'industrie de la conserverie et du saurissage du poisson se confine aux provinces touchant à la mer et les établissements sont situés sur les rives des baies et estuaires où les pêcheurs ont un accès facile pour faire la livraison de leurs prises.

Employés, salaires et gages.—Le nombre total d'employés par l'industrie pendant l'année est de 14,044 et se répartit comme il suit: (1) 602 employés salariés, (2) 9,671 employés à gages et (3) 3,771 apiéceurs. Les employés de la classification (3) se trouvent principalement dans les saumoneries de la Colombie Britannique où une grande partie du travail se fait à l'entreprise; l'entrepreneur embauche et paie ses propres employés et est lui-même rémunéré par l'exploitant de la conserverie selon la quantité de poisson mis en conserve. Environ 70 p.c. des ouvriers employés dans les saumoneries de la Colombie Britannique se classifient sous cet en-tête.

Les statistiques du nombre total d'employés des établissements sont basées sur l'emploiement mensuel moyen de travailleurs à gages et sur le nombre total de salariés et d'apiéceurs pour l'entière saison, la méthode de calcul étant comme il suit: sur le rapport de chaque établissement est faite l'addition du nombre de travailleurs à gages indiqués pour chaque mois, et le total ainsi obtenu est divisé par le nombre de mois pendant lesquels l'établissement a été en exploitation durant l'année. Par exemple, une homarderie emploie 12 personnes en mai, 14 en juin, 12 en juillet et 10 en août, en tout 48. On divise ce total par le nombre de mois d'exploitation, c'est-à-dire 4, ce qui donne 12 comme nombre d'ouvriers à gages de l'établissement. A ce nombre on ajoute celui des salariés et celui des apiéceurs, dont l'emploiement est une base annuelle ou saisonnière et non mensuelle. Le chiffre définitivement obtenu sera le nombre d'employés attribué à l'établissement en question pour l'année, et le calcul de ces totaux fournit le nombre d'employés dans toute l'industrie. La période d'emploiement varie selon la longueur de la saison des opérations: les homarderies sont exploitées pendant une période allant d'un mois à trois mois, et les saumoneries pendant des périodes plus longues, alors que plusieurs des saurisseries restent en exploitation toute l'année. En outre, dans quelques-unes des conserveries, le saurissage s'effectue avant et après l'époque consacrée à la mise en conserve. Les fluctuations de l'emploiement sont indiquées par les statistiques du nombre de travailleurs à gages employés chaque mois. Les statistiques mensuelles relatives aux apiéceurs ne sont pas disponibles. Il faut noter, en outre, que dans cette industrie, surtout celle des homarderies, il y a beaucoup d'employés à temps partiel; car le travail dépend grandement du volume des livraisons quotidiennes de poisson aux conserveries. Quand une quantité considérable arrive, il faut des employés supplémentaires pour les opérations de conserverie et un nombre additionnel de personnes, dont plusieurs femmes, sont employées pendant deux ou trois jours de la semaine. Dans les tableaux il n'y a pas de distinction entre les employés à temps entier et à temps partiel.

Pendant l'année l'industrie paie en salaires et gages un total de $4,042,565, dont $722,651 aux salariés, $2,632,120 aux employés à gages et $687,794 aux apiéceurs.

Le tableau suivant donne le nombre d'employés que comprend chacune des catégories et les salaires et gages payés à ces derniers.

7. Employés des conserveries et saurisseries en 1935, 1936 et 1937—nombre, salaires et gages

Année	Salariés		Employés à gages		Ouvriers à l'entreprise et à la pièce		Mombre total d'employés, salaires et gages	
	nomb.	$	nomb.	$	nomb.	$	nomb.	$

1936	558	734,678	10,073	2,544,903	4,607	724,269	15,238	4,003,850
1937	602	722,651	9,671	2,632,120	3,771	687,794	14,044	4,042,565

Employés à gages par mois.—Les détails sur l'emploiement mensuel ne sont colligés que pour les employés à gages. Dans le cas des salariés la formule demande le nombre employé à une date donnée pendant l'année, tandis que pour les apiéceurs le relevé porte sur le nombre moyen employé pendant l'année. Les mois où l'emploiement est le plus considérable pour les employés à gages dans l'ensemble de l'industrie sont mai et juin, la tendance à la hausse en ces mois étant principalement attribuable à l'emploiement dans les homarderies, où la saison est à son apogée. Dans les saumoneries la saison s'étend de mai à octobre inclusivement; l'emploiement est à peu près constant toute l'année dans les sardineries, les conserveries d'autres poissons et les saurisseries.

Le tableau suivant donne le nombre d'employés à gages, hommes et femmes, par mois, et le nombre moyen pour l'année.

8. Travailleurs à gages dans les conserveries et les saurisseries inscrits sur la liste de paie chaque mois, 1935, 1936 et 1937 (a)

(a) A l'exclusion des travailleurs à l'entreprise et à la pièce.

Sommes hebdomadaires versées aux divers groupes d'employés à gages.—La question de la formule portant cet en-tête requiert que les employés à gages soient classifiés d'après les montants qui leur sont payés pour une semaine complète dans le mois où l'emploiement est le plus considérable. L'échelle des paiements commence avec le groupe de ceux qui reçoivent moins de $6 par semaine et va jusqu'au groupe qui est le mieux rémunéré et qui comprend les employés recevant $50 et plus pour une semaine de travail. Chez les ouvrières, le plus grand groupe individuel est la classification couvrant les paiements de moins de $6 et le nombre d'ouvrières de ce groupe forme un total de 2,137. Toutefois, la question ne fait pas de distinction entre les employées à temps entier et les employées à temps partiel; il est probable que plusieurs de celles qui se trouvent dans le groupe le moins rémunéré sont des travailleuses à temps partiel. Chez les hommes, le plus grand groupe individuel est celui des ouvriers recevant de $12 à $12.99; ce groupe comprend 740 travailleurs.

Le tableau suivant donne le nombre des divers groupes d'employés à gages les années 1936 et 1937.

9. Sommes hebdomadaires versées aux divers groupes d'employés à gages: Sommes payées aux ouvriers des conserveries et des saurisseries pour le travail d'une semaine du mois pendant lequel l'emploi a été le plus élevé, 1936 et 1937 (a)

(a) A l'exclusion des travailleurs à l'entreprise et à la pièce.

Matières premières.—Le prix d'achat du poisson et autres matières premières employées par l'industrie en 1937 est de $16,318,781. Ce total comprend $12,179,219 pour le poisson et $4,139,562 pour les item divers tels que huiles comestibles, sel, récipients, etc. La quantité de poisson employé est de 7,431,030 quintaux, soit 75 p.c. de la quantité totale de poisson de mer pris et débarqué par les pêcheurs canadiens pendant l'année. Le reste de la prise représente la quantité mise directement sur le marché par les pêcheurs, soit à l'état frais, soit en conserves domestiques. Le tableau 10 donne la valeur des divers item pour les années 1935–1937.

10. Quantité et valeur des matières premières utilisées dans les conserveries et les saurisseries, 1935, 1936 et 1937

Matières premières	1935		1936		1937

(a) Ne paraît pas séparément avant 1936.

Production.—La valeur de production des établissements en 1937 est de $26,088,625, dont $19,032,584 ou 73 p.c. du total pour la valeur des produits manufacturés et $7,056,041 ou 27 p.c. pour celle du poisson mis sur le marché pour consommation à l'état frais. Comparativement à l'année précédente, la valeur totale montre une réduction de $596,176 ou de 2 p.c. Le principal groupe, pour ce qui est de la valeur du produit, comprend les saumoneries dont la valeur est de $11,060,968 ou 42 p.c. du montant enregistré pour tous les établissements. Le groupe contenant les saurisseries occupe le deuxième rang et la branche de l'industrie comprenant les homarderies, le troisième. Parmi les provinces, la Colombie Britannique occupe la première place et la Nouvelle-Ecosse, la deuxième. La relation qui existe entre la valeur de production de l'industrie dans chaque province et le total pour le Canada paraît, d'après le pourcentage, dans

l'état suivant: Colombie Britannique, 59; Nouvelle-Ecosse, 24; Nouveau-Brunswick, 12; Québec, 3; Ile du Prince-Edouard, 2. La valeur de production de la conserverie et du saurissage en 1937 représente 82 p.c. de la valeur de tous les produits des pêcheries maritimes mis sur le marché, tandis que la valeur du poisson mis directement sur le marché par les pêcheurs, soit pour consommation à l'état frais, soit en conserves domestiques, s'attribue les 18 p.c. qui restent.

Le tableau suivant donne, pour chaque classification d'établissement, la valeur de production du poisson vendu pour consommation à l'état frais et du poisson apprêté, de 1935 à 1937

11. Valeur de la production des conserveries et des saurisseries, 1935, 1936 et 1937

Tableaux d'ensemble.—Une section des tableaux d'ensemble du présent rapport est consacrée aux statistiques des conserveries et des saurisseries; on y trouve, par province et par comté ou district, des détails sur le capital, les employés, les salaires et gages, la valeur de la production et les autres aspects de l'industrie qui ont fait l'objet d'un résumé succinct dans les paragraphes précédents.

Revue des pêcheries par province

Les tableaux ci-dessous (12-18) montrent, par province: la valeur totale des pêcheries; la quantité prise et débarquée et la valeur marchande des principaux poissons du commerce; la quantité et la valeur de tout le poisson pris, débarqué et mis sur le marché; les valeurs totales, par comté ou district, du poisson de mer pris, débarqué et mis sur le marché; la quantité de poisson de mer produite par les pêcheries côtières; l'outillage-capital; le personnel.

(a) Quantité prise. (b) Valeur des ventes.

(c) Antérieurement à 1934, les totaux concernant le flétan comprenaient les prises débarquées dans des ports de la Colombie Britannique par des vaisseaux des Etats-Unis, alors que depuis 1934 les débarquements américains sont exclus des statistiques, les chiffres se rapportant uniquement aux prises débarquées par des vaisseaux canadiens. Voir renvoi page 140 pour les prises débarquées par des navires américains en 1937.

Primes

En vertu d'une "Loi pour encourager le développement des pêcheries maritimes et la construction des navires de pêche", une somme de $160,000 est donnée en primes chaque année par le Gouverneur en conseil. Sous le nom de primes de pêche elles sont distribuées par le ministère des Pêcheries parmi les pêcheurs et les propriétaires de navires et de barques de pêche du littoral de l'Atlantique selon les règlements édictés de temps à autre par le Gouverneur en conseil.

En 1937, les versements sont effectués sur la base suivante:

Aux propriétaires de navires de pêche ayant droit à cette prime, $1 par tonne enregistrée; avec un maximum de $80 par navire.

A chaque membre de l'équipage ayant droit à la prime, $7.60.

Aux propriétaires de barques mesurant au moins 12 pieds de quille, $1 par embarcation.

A chaque pêcheur d'une barque ayant droit à une prime, $6.90.

Le montant payé en 1937 est de $159,857.25. réparti comme il suit:

A 541 propriétaires de navires et leurs équipages.....$ 33,457.60
A 9,981 barques et leurs équipages.....$ 126,399.65

Commerce extérieur

Exportations.—La valeur des exportations canadiennes de poisson et de produits poissonniers en 1937 est de $28,902,152, augmentation de $3,504,050 ou de 14 p.c. sur l'année précédente et augmentation de $4,042,666 ou de 16 p.c. sur 1935. Les principaux clients sont les Etats-Unis et le Royaume-Uni; les exportations au premier pays valent $6,721,764 ou 23 p.c. du total, tandis que les exportations au dernier pays valent $14,004,575 ou 48 p.c. Les exportations à tous les pays de l'Empire Britannique donnent une valeur totale de $11,178,572; les exportations aux pays étrangers donnent une valeur totale de $17,723,580, celles des Etats-Unis s'élevant à 79 p.c. de ce dernier chiffre. Les tableaux relatifs au commerce donnent un total de 84 pays recevant des expéditions de poisson et produits poissonniers canadiens en 1937. Les item individuels d'exportation les plus considérables sont: saumon en boîte, $7,533,648; homard frais, $2,438,400; homard en boîte, $1,984,167; saumon frais et congelé, $1,652,145; corégone frais et congelé, $1,605,862; morue séchée, $1,210,661. Les exportations de saumon en boîte se font dans le monde entier, en 1937 les expéditions sont dirigées sur 66 pays dont les principaux sont: Royaume-Uni (196,729 qtx), Australie (144,809 qtx), France (59,212 qtx), Etats-Unis (55,975 qtx), Sud-Africain britannique (35,510 qtx). Les principaux pays de destination pour les exportations de homard en boîte sont le Royaume-Uni, les Etats-Unis et la France; pour la morue séchée, les Antilles et les Etats-Unis. L'exportation de poisson frais et congelé se fait surtout aux Etats-Unis.

Importations.—Les importations canadiennes de poisson et produits poissonniers sont relativement faibles. En 1937 les importations ont une valeur totale de $2,877,131, diminution de $41,120 sur l'année précédente. Les principaux item d'importation sont l'huile de foie de morue ($369,109), la sardine ($319,202), les huîtres ($275,345), les crabes et les coques ($225,011).

Revue rétrospective

Les cinq tableaux suivants présentent une revue rétrospective de l'industrie de la pêche au Canada pendant les années passées. En ce qui concerne la production, les données sont établies par province et par année et remontent jusqu'à 1870. Quant au nombre et à la valeur des navires, barques, etc., les chiffres partent de l'année 1880; le personnel qu'emploie cette industrie est révélé depuis 1895.

19. Revue rétrospective—(a) Valeur totale des pêcheries dans les différentes provinces du Canada pour les années 1870 et 1875 jusqu'à 1937 inclusivement

20. Tableau de conversion de la pesée du poisson.

Dans ce tableau, dans le cas de la morue, de l'églefin, de la merluche et du brosmius, du merlan et du flétan (littoral de l'Atlantique) on entend par poisson frais le poisson dont on a enlevé les entrailles et non la tête. Le poids du flétan sur la côte du Pacifique est pris après l'enlèvement de la tête et des entrailles. Dans le cas de l'espadon et du thon le poids comprend le poisson après l'enlèvement de la tête, de la queue et des entrailles. Pour tous les autres poissons le terme "poisson frais" signifie le poisson tel qu'il est sorti de l'eau.

MORUE, ÉGLEFIN, MERLUCHE ET BROSMIUS OU MERLAN

300 lb de poisson frais donnent 1 qtl de filets frais.
160 lb de poisson frais donnent une caisse de poisson en boîte.
200 lb de poisson frais donnent 1 qtl de poisson salé vert.
300 lb de poisson frais donnent 1 qtl de filets fumés.
200 lb de poisson frais donnent 1 qtl de poisson fumé.
300 lb de poisson frais donnent 1 qtl de poisson séché.
400 lb de poisson frais donnent 1 qtl de poisson désossé.

HARENG

70 lb de hareng frais donnent une caisse de hareng en boîte.
200 lb de poisson frais donnent 1 qtl de hareng fumé.
300 lb de poisson frais donnent un baril de hareng saumuré.
200 lb de poisson frais donnent un baril de boette (fraîche ou salée).
200 lb de poisson frais donnent un baril d'engrais.
125 lb de poisson frais donnent 1 qtl de hareng salé à sec.

MAQUEREAU OU ALOSE

70 lb de poisson frais donnent une caisse de poisson en boîte.
300 lb de poisson frais donnent un baril de poisson saumuré.
400 lb de poisson frais donnent un baril de filets de maquereau salés.

SARDINE

Un baril de poisson frais donne de 4 à 5 caisses de poisson en boîte.
Une caisse de 25 livres équivaut à 100 boîtes de $\frac{1}{4}$ de lb chacune.

PILCHARD

70 lb de poisson frais donnent une caisse de poisson en boîte.
200 lb de poisson frais donnent un baril de boette.

GASPAROT

200 lb de poisson frais donnent 1 qtl de poisson fumé.
275 lb de poisson frais donnent un baril de poisson saumuré.

SAUMON

84 lb de poisson frais (Pacifique) donnent une caisse de 48 lb de poisson en boîte.
70 lb de poisson frais (Atlantique) donnent une caisse de 48 lb de poisson en boîte.
170 lb de poisson frais donnent 1 qtl de poisson fumé.
125 lb de poisson frais donnent 1 qtl de poisson salé à sec.
150 lb de poisson frais donnent 1 qtl de poisson fumé doux.
150 lb de poisson frais donnent 1 qtl de poisson saumuré.

THON

100 lb de poisson frais donnent une caisse de poisson en boîte.

ENCORNET

Un baril pèse 250 livres.

COQUES

Un baril de coques fraîches donne une caisse de chair en boîte.
(48 boîtes de 6 onces de chair chacune.)

HOMARD

200 lb de homard frais donnent une caisse de homard en boîte.
(48 boîtes de 12 onces de chair chacune.)
500 lb de homard frais donnent 1 qtl de chair.

PREFACE

This Report is issued under an arrangement for statistical co-operation between the Dominion Bureau of Statistics and the Government departments having jurisdiction with regard to fisheries throughout Canada. These departments comprise: the Dominion Fisheries Department which exercises jurisdiction over the fisheries of the Maritime provinces, Yukon, British Columbia and the Magdalen Islands, and the Fisheries Branches of departments of Ontario, Quebec, Manitoba, Saskatchewan and Alberta which have jurisdiction over the fisheries of their respective provinces, excepting in the case of Quebec, the fisheries of the Magdalen Islands. The province of British Columbia has a Fisheries Branch, but it does not engage in independent statistical work.

Under the arrangement above referred to, the statistics of the catch, and of the products marketed in a fresh state or domestically prepared, are collected by the local fisheries officers, checked in the Department of Fisheries, and co-ordinated and compiled in the Dominion Bureau of Statistics. In the case of manufactured fish products, schedules in conformity with those of other sections of the Census of Industry are sent by the Bureau to the operators of canneries, fish-curing establishments, etc., the fisheries officers assisting in securing an expeditious and accurate return. The grateful acknowledgments of the Bureau are tendered to the officers of the provincial governments who co-operate in these arrangements.

R. H. COATS,

Dominion Statistician

Dominion Bureau of Statistics,

Ottawa, November 7, 1939.

89667—1½

THE FISHERIES OF CANADA

The Early Fisheries.—*Fishing is one of the earliest and most historic industries of Canada. Leaving aside inconclusive evidence in favour of authentic record, one must ascribe to John Cabot the honour of having discovered, in 1497, the cod banks of Newfoundland, when he first sighted the mainland of North America. He reported that the sea was so covered with fish that they could be caught "with baskets, a stone being attached to make the basket sink in the water". Cape Breton, one of the oldest place-names in America, is a memorial of the early French fishermen —and the Spaniards and the Portuguese were but little behind. Fernandez de Navarette mentions all three as frequenters of the "Grand Banks" before 1502. The fishing was by hand lines over barrels made fast to the bulwarks to prevent fouling, the vessels remaining during fine weather, then returning to France with from 30,000 to 50,000 cod. Voyages along the coast soon showed the cod as plentiful inshore as on the outer banks, and it became common for a crew to anchor in a bay, erect a hut on shore, and make daily excursions to the fishing grounds—the product being salted and dried on land and at the end of the season shipped to France. Jacques Cartier, when he went up the St. Lawrence in 1534, found traces everywhere of these early "Captains Courageous" and of their rivalries in arms no less than in the capture of the teeming product which had tempted them so far from home. An establishment of the kind mentioned was founded at Tadoussac by Chauvin in 1599. Soon the fishermen began to stay all winter and thus to erect permanent fishing settlements. The first grant of the fisheries of Canada was made by the King of France to de Monts in 1603. Fishing, therefore, may well be regarded as the first industry to be systematically prosecuted by Europeans in what is to-day the Dominion of Canada. It has never since ceased to yield a perennial harvest.*

The Canadian Fishing Grounds.—*Canada's fishing grounds are perhaps the most extensive in the world. On the Atlantic, from Grand Manan to Labrador, the coast line, not including the lesser bays and indentations, measures over 5,000 miles. The bay of Fundy, 8,000 square miles in extent, the gulf of St. Lawrence, fully ten times that size, and other ocean waters comprise not less than 200,000 square miles or over four-fifths of the area of the fishing grounds of the North Atlantic. In addition there are on the Atlantic seaboard 15,000 square miles of inshore waters controlled entirely by the Dominion. Large as are these areas they represent only a part of the fishing grounds of Canada. The Pacific coast of the Dominion measures 7,180 miles in length and is exceptionally well sheltered, whilst throughout the interior is a series of lakes which together contain more than half of the fresh water on the planet, Canada's share of the Great Lakes alone amounting to over 34,000 square miles, a total which of course does not include lake Winnipeg (9,457 square miles) lake Manitoba, and others of even greater area.*

Still more important than the extent of the Canadian fishing grounds is the quality of their product. It is an axiom among authorities that food fishes improve in proportion to the purity and coldness of the waters in which they are taken. Judged by this standard, the Canadian salmon, cod, halibut, herring, mackerel and whitefish are the peers of any in the world. It is possible, therefore, to state that by far the most valuable fisheries of the western hemisphere, if not of the globe, belong to Canada.

It will be seen from the foregoing that it is impossible to deal with the Canadian fisheries in the aggregate; they are those of a continent rather than of a country, and are of corresponding diversity. Omitting the Hudson Bay and peri-Arctic region, which extends from Ungava to Alaska, there are roughly the following divisions of the Canadian fisheries:

Giant Tuna Fish of 680 lb. at Hubbards, N.S.

Testing vacuum in cans of salmon at the canned salmon inspection laboratory conducted at Vancouver, B.C. by the Dominion Department of Fisheries. All British Columbia canned salmon must be submitted for inspection by this federal laboratory.

1. Atlantic Fisheries.—*These were the first Canadian fisheries in point of time and until 1918 they remained the most important for aggregate value of product. Cod, halibut, haddock, herring, mackerel, smelt, sardine, swordfish, salmon lobster and oyster fisheries are included. Conditions are fairly uniform throughout these fisheries, which are commonly divided into the inshore and deep-sea fisheries. The inshore or coastal fishery is carried on in small boats, usually motor driven, with crews of two or three men, and in a class of small vessels with crews of from four to seven men. The means of capture employed by boat fishermen are gill nets and hooks and lines, both hand lines and trawls; whilst from the shore are operated trap nets, haul seines and weirs. Haddock as well as cod is a staple product; during the spring and summer it is split and salted but the important season comes with the autumn, when the fish are shipped fresh or smoked. The deep-sea fisheries are worked by vessels of from 40 to 100 tons, carrying from twelve to twenty men operating mainly with trawl lines from dories, although some fishing is done directly from the vessels by means of hand lines. The fleets operate on the various fishing banks, such as Grand Bank, Middle Ground and Banquereau. The vessels, built in the home shipyards, remain at sea, sometimes for months at a time, and in the hands of sailors who have no superior, seldom come to grief. When they return, the fish, which have been split and salted on board, are taken on shore and washed and dried. The West Indies provide the chief market for this product; no cod fish in the world stands the tropical climate like that cured by the fishermen of the Maritime provinces. Steam trawling as it is carried on in the North Sea was introduced on the Atlantic coast of Canada a number of years ago. The trawlers operate practically the whole year and their catches are utilized entirely for the fresh fish trade. Under the Fisheries Act, trawlers must be registered as British ships in Canada, owned in Canada and licensed by the Minister of Fisheries, and their operations must be restricted to waters at least 12 miles from shore.*

Lobstering operations, which commenced about 1870, provide a distinctive industry. In that year there were three lobster canneries on the Atlantic coast of Canada; in 1938 the canneries numbered 215 and gave work to nearly 5,000 people; 30,000,000 lobsters is a normal catch. In addition to the canned product, a large quantity of lobster is marketed in shell, the greater part of which is exported to the United States. The difficulty of enforcing regulations prohibiting the capture of undersized and spawning lobsters offers a constant problem in connection with the output, but with the co-operation of the fishermen themselves the fishery may be maintained and the annual harvest show no decline. In New Beunswick the canning of sardines, which are young herrings and not a distinct type of fish, occupies the position of the leading fisheries industry. The oyster fishery, whose early abundance was for a number of years greatly diminished, is being brought back to its former position of importance through the development by the Government of oyster farming; favourable areas in Prince Edward Island and Nova Scotia waters have been seeded, and the work in connection with the oyster culture is being carried on under the direction of experts.

The fishing population of the Maritime provinces is a specialized and stable industrial class. The coast-wise fisheries are operated from April to November, or to January in sheltered districts; and although the larger vessels work all winter, several thousand men are available for a time each year for other employment. This they find about the small plots of land which the most of them own or occupy, in the lumber camps of New Brunswick, or in the collieries of Nova Scotia. A few from Lunenburg and other centres engage in the West Indian trade. Apart from restrictions of weather and close seasons, the prevailing method of paying the men on shares has a further tendency in years of low catches or prices to drive them into secondary occupations.

2. Inland Fisheries.—*The Great Lakes and tributary waters of the St. Lawrence are a second great division of the Canadian fisheries. The value of the inland fisheries of Quebec lies chiefly in the output of the eel, pickerel, and sturgeon*

fisheries. In Ontario, whitefish, trout, blue pickerel, lake herring, perch, pickerel and tullibee are the most important commercial fishes, though pike, sturgeon and coarse fish yield a fair return. The season on the Great Lakes lasts from six to eight months, and though fishing through the ice is followed by many a large number depend on miscellaneous employment between the seasons. Moving westward, lake Winnipeg, lake Winnipegosis, lake Manitoba and the smaller lakes to the north and east furnish most of the fish products of Manitoba. Whitefish and pickerel are the chief products, but pike, tullibee, goldeye and many other varieties are found. In Saskatchewan and Alberta commercial fishing is confined to the regions north of the Saskatchewan river, where whitefish in large quantities are taken. The difficulties in connection with transportation have not yet been surmounted; some of the greatest lakes of the continent—Reindeer, Great Slave, Great Bear—and hundreds of smaller bodies of water are still beyond reach from a marketing point of view. The lakes of the west, however, repeating the part which the St. Lawrence played in the days of the French regime, and the cod banks in the history of New England, have assisted greatly in the settlement of the country by providing a much needed food supply for early arrivals.

3. Pacific Fisheries.—*In British Columbia there is an interior fishing region which corresponds in the main to the prairie section; in the early history of the province it is doubtful if the fur trade (which opened the door by way of the Rocky Mountains to later enterprise) could have established its footing but for these fisheries. The great wealth of British Columbia, however, in this respect—the source from which she contributes approximately two-fifths of the marketed value of the fish products of Canada and has built up a trade which reaches to the ends of the earth—is in the estuarian salmon fisheries of the Fraser, the Skeena, the Naas, and other rivers of the Pacific slope. Every species of this king of food fishes known to the waters of the Pacific (which, however, is not the salmo salar or true salmon) is to be found on the British Columbia coast—the sockeye, the spring, the cohoe, the pink and the chum salmon. Of these, the sockeye, though not taken in such great numbers as the pink and chum species, is by far the most important, owing to its prevailing deep red colour and excellent texture, which have created so keen a demand for it in British and foreign markets. On the Fraser river, which used to be the chief source of supply, but which has now yielded place to the northern waters, the yield varies to a considerable extent from year to year. The run begins late in July and is at its height in the opening weeks of August, while the northern rivers have a somewhat earlier season. The spring or quinnat salmon is a much larger fish; it was the first species used in the United States for canning. The run begins early in the spring and continues until the end of July. The cohoes are smaller, running, like the sockeye, in schools, during September and October on the Fraser, and earlier on the northern streams. The chum salmon is canned and a considerable quantity also is salted for export to the Orient. The run of pink salmon comes about three or four weeks later than that of the sockeye.*

Halibut abounds off Vancouver island and between the Queen Charlotte Islands and the mainland, and though the first endeavour to establish an industry was unsuccessful, by 1903 British Columbia supplied 10,000,000 pounds of 25,000,000 pounds taken on the whole Pacific coast north of California. The former figure has since, in many years, been trebled, although after 1930 the quantity was reduced owing to the restrictions imposed under the provisions of the Treaty signed by Canada and the United States for the conservation of this fishery. Herring is taken in large quantities by British Columbia fishermen and is used chiefly in the preparation of the dry-salted product and in the manufacture of oil and meal. The pilchard, which is of the herring family, and is reported for Canada on the Pacific coast only, occupies third place among the chief commercial fishes of British Columbia. There is a large annual output of canned pilchard, but the principal items of production of the fishery are oil and meal. There is also the whale fishery, which has two stations on the Queen Charlotte Islands. The catch includes whales of many kinds—

sulphur bottom, finback, humpback and sperm, the last mentioned predominating. Whale hunting is carried on in boats with Svend Foyn harpoon guns—a method which was introduced from Norway. Every scrap of the whale is used—oil, meal and fertilizer are its more important products. Black and ling cod, flounders, skate, soles, clams and oysters are also abundant in British Columbia waters.

A word might be added with regard to the Canadian fur-seal fisheries of the Pacific, whose historic headquarters were the city of Victoria. Early in the present century the industry had, owing to the scarcity of the animals, been reduced to small proportions, and in 1911 a treaty was arranged between Great Britain, the United States, Japan and Russia, the terms of which prohibit pelagic or open-sea fishing. This treaty, still in effect, has for its object the conservation of the seals and it has resulted in greatly increasing the size of the herds. As compensation for the suspension of her sealing rights Canada receives annually from the Governments of the United States, Japan and Russia a share of the proceeds of the sealing on the Pribaloff Islands and other rookeries owned by the respective countries. The Indians of British Columbia are exempt from the provisions of the Treaty, but their hunting must be carried on from open boats, manned by not more than five persons each and without the use of firearms.

Game Fish.—*The above is a purely industrial and commercial survey. Fishing for sport, however, has its economic side in a country of such famous game fish as the salmon of the Restigouche and other rivers of the Maritime provinces, the black bass and speckled trout of the Quebec and Ontario highlands, the red trout of the Nipigon and the salmon and rainbow trout of British Columbia. A considerable public revenue is derived from the leasing of waters in sparsely settled districts to clubs and individuals for sporting purposes. Several hundreds of guides find employment here during the summer months.*

The Government and the Fisheries*

Upon the organization of the Dominion Government at Confederation, the administration of the Canadian fisheries was placed under the Department of Marine and Fisheries. Early in 1930 a Department of Fisheries, in charge of its own Minister, was organized. This Department now administers all the tidal fisheries (except those of the mainland portion of Quebec, which, by agreement, are under provincial administration), the non-tidal fisheries of Nova Scotia, and the fisheries of Yukon and the Northwest Territories. The non-tidal fisheries of New Brunswick, Prince Edward Island, Ontario, the Prairie Provinces, and British Columbia, and both the tidal and non-tidal fisheries of Quebec (except the fisheries of the Magdalen Islands) are administered by the respective provinces, although the Dominion Department does certain protective work in non-tidal waters of New Brunswick, Prince Edward Island, and British Columbia. The right of fisheries regulation for all the provinces, however, rests with the Dominion Government. See the Fisheries Act (22-23 Geo. V, c. 42). The expenditure of the Dominion on the fisheries in the fiscal year 1938-39, including civil government salaries, contingencies, etc., was $2,568,443 and the revenue $112,778.

Conservation.—*River and lake fisheries certainly, and sea fisheries probably, if left to themselves, conform to the economic law of diminishing returns. The Canadian Government, accordingly, has had for a main object the prevention of depletion by the enforcement of close seasons, the forbidding of obstructions and pollutions and the regulation of nets, gear, and fishing operations generally. In addition, an extensive system of fish culture has been organized; the Dominion, in 1938, operated 13 main hatcheries, 1 subsidiary hatchery, 6 rearing stations, 8 salmon retaining ponds, and several egg collecting stations at a cost of $233,408, and distributed 33,685,000 trout and salmon eggs, fry, and older fish. Distributions were made in suitable selected waters. Investigations and experiments directed*

* Revised under the direction of J. J. Cowie, Acting Deputy Minister, Department of Fisheries, Ottawa.

toward the establishment of commercial oyster farming have been successfully carried on since 1929 in Prince Edward Island by the Dominion Department of Fisheries and have more recently been extended to Nova Scotia. In each of these provinces control of the oyster areas was transferred to Federal authority by the Provincial Government. In the two other oyster producing provinces, New Brunswick and British Columbia, control of the areas is in provincial hands, saving on a small strip of the New Brunswick coast where areas have been transferred by the Provincial Government to the control of the Dominion Department of Fisheries in order that certain investigations might be carried on.

Direct Assistance.—*On the Atlantic coast, where conditions attending fishing operations make such a service desirable, a system has been established of broadcasting radio reports as to weather probabilities, bait and ice supplies and ice conditions. Systems of instruction in improved methods of fish handling, fish curing, etc. have been carried on for some years past by the Department of Fisheries.*

Continuing the plan which had been followed for several years in connection with direct aid to needy fishermen, the sum of $500,000 was made available in the appropriations of the Department of Fisheries for the fiscal year 1938-39. In co-operation with the governments of Nova Scotia, New Brunswick, Prince Edward Island and Quebec, loans and grants were made during the year to 14,308 fishermen and 36 associations of fishermen. Joint aid funds were set up in each province by contributions from the Department and the Provincial Government, and from these funds assistance was given to fishermen in re-establishing themselves, total spendings from the departmental appropriation amounting to $369,443.

Nation-wide advertising of fish foods was again carried on by the Department of Fisheries during the year in order to assist the fishermen by expanding the demand for their product. Approximately $150,000 was spent for this purpose during 1937-38. All of this sum save $15,000 was expended within Canada. An amount of $15,000 was transferred to the United Kingdom for use in supplementing the advertising of Canadian canned salmon and canned lobster in the "Canada Calling" campaign. In addition to the advertising in the Dominion, fish cookery lecturer-demonstrators were kept in the field by the Department as a further means of increasing the use of fish foods.

Scientific Research.—*Under the direction of the Fisheries Research Board of Canada (formerly the Biological Board of Canada), stations for the conduct of research into the numerous complex problems occurring in connection with the fisheries are established at Halifax, N.S., St. Andrews, N.B., Grand Riviere, Que., and Nanaimo and Prince Rupert, B.C. Another station, chiefly for oyster investigation work, is conducted by the Board at Ellerslie, P.E.I., and a sub-station for salmon investigations at Cultus Lake, B.C. A permanent staff of scientists is employed by the Board. The life histories of edible fishes, the bacteriology of fresh and cured fish, improved methods of handling and preparing fish, and numerous other practical problems have been taken up and scientific memoirs and reports issued.*

International Problems.—*Fisheries problems of international importance have arisen from time to time on both coasts of the Dominion, as well as in the Great Lakes area where problems are complicated by the number of State governements concerned. A major international problem has been the question of United States privileges in the Atlantic fisheries of Canada. An outline of the history of this question may be found on pages 9 and 10 of* Fisheries Statistics of Canada, 1935. *Since 1933, under the former* modus vivendi *plan, which grew out of the unratified treaty of 1888, United States fishing vessels have again been permitted to enter Canadian ports to buy bait and other fishing supplies.*

Joint steps to deal with two important Pacific Coast fisheries problems have been taken in recent years by Canada and the United States—one problem the preservation of the halibut fishery of the Northern Pacific Ocean and Bering Sea, the other the protection, preservation and extension of the sockeye salmon fisheries in the Fraser River system.

The first treaty relating to the halibut fishery was signed on March 2, 1923. Under this treaty a closed season for halibut fishing in each year was provided for and an international commission was set up to conduct an investigation into the fishery and the life history of the halibut. A further convention, signed at Ottawa on May 9, 1930, and ratified by the respective Governments on May 9, 1931, provided for the regulation of the fishery by the commission through the division of the convention waters into fishing areas, changing of dates for closed seasons, and so on. A new convention was signed at Ottawa on January 29, 1937, extending the regulatory powers of the commission. Steps taken by the international commission under the several conventions have resulted in steady improvement in the state of the halibut fishery in the waters concerned.

The sockeye Salmon Fisheries Convention was signed at Washington on May 26, 1930, but exchange of ratifications did not take place until July 28, 1937, although the Canadian Parliament had given approval to the treaty several years before that time. The convention waters include not only the Fraser River watershed in British Columbia but also certain Canadian, United States and international waters making up the Fraser approach and through which the Fraser River sockeye pass.

Under the sockeye treaty the International Pacific Salmon Fisheries Commission was set up in 1937, consisting of three members appointed by Canada and a like number appointed by the United States. The commission which has established its headquarters at New Westminster, B.C., is empowered by the convention to make "a thorough investigation into the natural history of the Fraser River sockeye salmon, into the hatchery methods, spawning ground conditions, and other related matters," to conduct the sockeye salmon fish cultural opertions in treaty waters, and to recommend to the Governments "removing or overcoming obstructions to the ascent of sockeye salmon, that may now exist or may from time to time occur, in any of the waters covered by this convention. . ." Certain powers of regulation were also given the commission by the convention but one of the understandings on which the treaty was approved by the two countries was that "The commission shall not promulgate or enforce regulations until the scientific investigations provided for in the convention have been made covering two cycles of sockeye salmon runs, or eight years."

Fishing Bounties.—*By an Act of 1882 (45 Vict., c. 18) for the development of the sea fisheries and the encouragement of boat-building, provision was made for the distribution, annually, among fishermen and the owners of fishing boats and vessels on the Atlantic waters, of $150,000 in bounties, representing the interest on the amount of the Halifax Award. An Act of 1891 (54-55 Vict., c. 42) increased the amount to $160,000, the details of the expenditure to be settled each year by Order in Council.*

THE MODERN INDUSTRY

The latter half of the nineteenth century saw the commencement of expansion in the commercial fishing industry of Canada. In 1844 the estimated value of the catch was only $125,000. It doubled in the following decade and by 1860 had passed the million mark. Ten years later it was six millions and this was again more than doubled in 1878. By 1900 it had reached a total of 21 millions and the growth continued with little interruption until 1918, when it reached the high record of 60 millions. Since then there have been decreases in value, but these are due to lower prices rather than to smaller catches. In 1938 the value was $40,492,976. It will be understood that the figures given represent the total value of the fish as marketed,

whether in a fresh, dried, canned or otherwise prepared state. Meanwhile the number of employees has increased in like proportion, mounting in some years to over 90,000, while the capital investment has gone as high as $64,000,000. In 1938 the number of employees was 85,994, and the capital investment, $48,561,442.

Among the different kinds of fish, the cod of the Atlantic and the salmon of the Pacific, in the earlier years of the fishing industry, disputed the primacy, but since 1895 salmon has definitely taken the lead, and the heavy pack and high price of lobsters have, in more recent years, sent cod down to third place. For the salmon fishery the yearly average of production in the period 1929 to 1938 was $12,515,482; for the lobster fishery, $4,567,646; and for the cod fishery, $3,319,603. For salmon, the high record year in the period was 1930, with $17,731,891; and for the lobster and cod fisheries, 1929, with $5,696,542 and $5,394,636 respectively. In earlier times the leadership among the provinces belonged to Nova Scotia, but British Columbia now occupies first place, with Nova Scotia second and New Brunswick third.

Trade.—*In view of the immense quantity of fish taken annually by Canadian fishermen, the trade must depend to a large extent upon the foreign market as an outlet for the product. From 60 to 70 per cent of the yearly capture is an average export, of which the United States takes approximately one-half and the United Kingdom one-fourth. In the calendar year 1938, total exports amounted to $27,543,680 of which $12,713,819 went to the United States and $6,880,661 to the United Kingdom. Another grouping of the export statistics shows that $11,457,680 went to British Empire countries and $16,086,000 to foreign countries. The most important single export is canned salmon (to the United Kingdom and European markets), followed by fresh lobster, canned lobster, fresh salmon, fresh whitefish, and dried cod (to the West Indies, South America, etc.). For fresh fish the United States is the chief market. Canadian imports of fish in 1938 amounted to $3,036,227.*

REVIEW OF THE FISHERIES FOR THE YEAR 1938

Commercial landings of fish and shellfish by Canadian fishermen in 1938 show some decrease from the total for 1937, but the marketed value of the year's production, $40,492,976, records an increase of more than a million and a half, and was greater than the marketed value of any other year since 1930. Total catch from sea and freshwater fisheries was 10,741,150 hundredweights, or approximately 176,900 hundredweights less than in the year before. The decrease was in the landings from the sea fisheries, which amounted to 9,845,723 hundredweights as against 10,026,396 hundredweights in the preceding year. The landings from the inland or freshwater fisheries, 895,427 hundredweights, increased by between three and four thousand hundredweights. The landed value of the sea fisheries catch or in other words, the value of the catch to the fishermen as landed, increased by more than $58,000, notwithstanding that the aggregate quantity of fish and shellfish taken during the year was smaller than the catch of 1937. On the other hand, in the case of the inland fisheries there was a decrease of $422,279 in landed value, in spite of the fact that the catch had increased. On the marketed value side the increase was in the return from the sea fisheries—a gain of $1,790,101. The marketed value of the catch from the inland fisheries, $6,718,828, decreased by $273,419. Five of the provinces (Manitoba, Alberta, Prince Edward Island, Quebec and British Columbia) had increases in marketed value to their credit. The great gain, however, over $2,517,000, was in British Columbia.

Major Fisheries.—Taking the Dominion as a whole, the salmon fishery again leads in the marketed value of the year's catch. There was an increase of more than 42,500 hundredweights in the landings of salmon, and their marketed

value, $14,992,500 roundly stated, was greater by over $2,622,000 than the marketed value for 1937. The lobster fishery, second to the salmon fishery in point of marketed value return, yielded an increased catch as compared with the 1937 total, but a weakening of the prices in export markets had the effect of reducing the marketed value by more than $840,000. The value of the lobster catch as marketed was $3,793,219. In the case of the cod fishery, there was an increase both in catch and marketed value. The landings by the cod fishermen, approximately 1,702,000 hundredweights, increased by nearly 178,400 hundredweights and their marketed value, $3,335,231, showed a gain of $195,000. The herring fishery was not as successful as in the preceding year, and both catch and marketed value decreased. Whitefish was again of first importance in the freshwater fisheries, although catch and value alike decreased. Total landings of whitefish were 154,244 hundredweights and their marketed value was $1,650,347 which means a decrease of approximately 19,400 hundredweights on the one side and $237,500 on the other side. Other fish to show marketed value of more than one million dollars were as follows, some of them taken in the sea fisheries, others in freshwater operations: Halibut, $1,789,444; sardines, $1,393,129; haddock, $1,361,992; trout, $1,036,292; pickerel, $1,031,868.

SEA FISHERIES RESULTS

Figures showing by provinces the total catch of sea fish and shellfish during each of the calendar years 1938 and 1937 are given in the following table:

	1938	1937
	lb.	lb.
British Columbia	456,286,400	495,419,500
Quebec	86,507,800	71,596,600
New Brunswick	127,173,100	137,790,700
Prince Edward Island	29,420,400	27,525,000
Nova Scotia	285,184,600	270,307,800
Totals	984,572,300	1,002,639,600

Production in most of the more important fisheries was greater in 1938 than it had been in 1937, though aggregate catch from the sea fisheries decreased. The total Atlantic coast landings of cod, for instance, amounted to 168,338,800 pounds, or approximately 17,400,000 pounds more than in 1937. Atlantic herring landings, 114,906,400 pounds, were about 7,160,000 pounds greater than in the preceding year. The haddock, lobster, mackerel and sardine fisheries each showed an increase in catch, with the totals for 1938 amounting to 39,358,900 pounds in the case of haddock, 31,438,500 pounds of lobsters, 28,556,500 pounds of mackerel and 184,450 barrels of sardines.

On the Pacific coast the catch of salmon was 173,466,400 pounds as against 169,173,600 in 1937. The quantity of halibut landed in British Columbia by Canadian fishing vessels was 12,024,700 pounds, an increase of 303,000 pounds in round figures. British Columbia's herring production, however, decreased quite sharply and amounted to slightly less than 132,892,000 pounds, as compared with 192,979,500 pounds in the preceding year. While the herring catch decreased, the landings of pilchards, like the landings of salmon and halibut, show a gain. In 1937 the pilchard fishermen landed 96,148,500 pounds, but in 1938 their catch was 103,537,000 pounds. The combined landings from all of British Columbia's fisheries was less in 1938, however, than it had been in the previous year.

INLAND FISHERIES

Two of the areas in which fresh-water fisheries are carried on, Alberta and Manitoba, show increases in the value of fisheries production in 1938 as compared with 1937, but elsewhere there were decreases, with the net result that fresh-water production as a whole was valued at only $6,718,828, or $273,400 less, in round figures, than in 1937. The major decrease, close to $262,000, was in Ontario, and here the reduction was due in much the largest part to the lessened success of the blue pickerel fishery. The catch of blue pickerel—it is only in Ontario that this particular species of fish is taken—was less by some 21,300 hundredweights than in the year before when it had totalled about 94,500 hundredweights, roundly stated. The marketed value of the 1938 catch, slightly over $497,500, showed a decrease of $315,100.

The gain in Alberta was $59,600, and in Manitoba $15,100. In Saskatchewan's fisheries there was a decrease of $58,500 in marketed value, while in the case of Quebec's fresh-water fisheries, the reduction was $21,200. New Brunswick's inland output fell off by nearly $3,000, and in the Yukon Territory there was a decrease of close to $3,500. Round figures have been given here in all cases.

NOTE.—The foregoing "Review of the Fisheries, 1938", is issued through the courtesy of the Deputy Minister of Fisheries, in whose Department it was prepared.

FISHERIES STATISTICS OF CANADA, 1938

The total value of production of the fisheries of Canada for the year 1938 was $40,492,976, compared with $38,976,294 in 1937 and $39,165,055 in 1936. These totals represent the value of the product as marketed, whether sold for consumption fresh, domestically prepared or factory made. The following table shows the quantity caught and the value marketed of the chief commercial fishes (those valued at $100,000 or upwards) for the past five years, with a statement in the final column of the increase or decrease for 1938 compared with 1937.

1. Quantity (a) **and Value** (b) **of the Chief Commercial Fishes, Canada, 1934 to 1938**

Kind of Fish		1934	1935	1936	1937	1938	Increase or decrease 1938 compared with 1937 inc. + dec. −

Capital Equipment and Employees

In Primary Operations

Capital.—The capital investment, represented by the vessels, boats, and gear used in the primary operations of catching and landing the fish, had a total value in 1938 of $26,598,944, of which $21,679,805, or 82 per cent, is credited to the sea fisheries, and $4,919,139, or 18 per cent, to the inland fisheries. Comprised in the total are 41,319 vessels and boats, valued at $14,760,329, and nets, seines, traps and other gear to the value of $11,838,615. Compared with the preceding year, the capital investment of the sea fisheries shows a reduction of $203,132, while the value of the equipment used in the inland fisheries increased by $5,697, making a reduction for the equipment of both fisheries, combined, of $197,435.

Employees.—The number of men engaged in fishing during the year was 71,510, comprising 57,034 employed in the sea fisheries, and 14,476 in the inland fisheries. Compared with the preceding year the total number of fishermen shows an increase of 1,529.

In Fish Canning and Curing

Capital.—The capital investment of the canning and curing branch of the fisheries industry rose from $18,130,385 in 1937 to $21,962,498 in 1938. The increase is attributable chiefly to the larger investment in the salmon canneries. The relation which the capital of each classification bears to the total investment is shown by the following statement of percentages: salmon canneries,

53 per cent; fish curing establishments, 24 per cent; sardine and other fish canneries, 10 per cent; lobster canneries, 6 per cent; reduction plants, 4 per cent; freezing plants, 2 per cent; and clam canneries, 1 per cent.

Employees.—The number of persons employed in the establishments during the year was 14,484, compared with 14,044 in the preceding year.

Tables 3 to 6, which follow, contain summaries of capital equipment and employees in the primary operations and in fish canning and curing establishments, for Canada as a whole: other tables of the introduction present the information by provinces, while statistics by counties and fishing sub-districts will be found in Part II of the report.

3. Capital Equipment—Primary Operations. Value of Fishing Vessels, Boats, Nets, Traps, Piers and Wharves, etc., Employed in the Canadian Fisheries, 1936, 1937 and 1938

Details of Fish Canning and Curing Establishments

Number of Establishments.—The returns of plants engaged in canning and curing operations are classified according to the principal item of production, and the statistics are given separately in the report for each group, except where there are less than three establishments in any one group. The total number of plants in operation in 1938 was 561, divided as follows: lobster canneries, 215; salmon canneries, 102; clam canneries, 25; sardine and other fish canneries, 11; fish curing establishments, 172; freezing pants, 18; and reduction plants, 18. The number of salmon canneries increased from 75 in 1937 to 102 in 1938, but the increase is almost entirely for canneries of small size in the province of Quebec, where the number rose from 33 to 62. The salmon canneries on the Pacific coast are all of large capacity and number 38, compared with 37 in 1937. The number of lobster canneries was 62 less than the number recorded in 1937. The total for all classifications shows a decrease of 36. The processing of fish is an industry that is confined to the provinces bordering on the sea, the plants being located on the shores of bays and estuaries where they are of easy accessibility to the fishermen in making delivery of their catches.

Employees and Salaries and Wages.—A total of 14,484 employees is recorded by the establishments in the year 1938, an increase over the preceding year of 440. Comprised in the total are 642 salaried employees, 9,092 wage-earners, and 4,750 piece workers. The piece workers are credited chiefly to the salmon canneries of British Columbia, where a large part of the work is done under contract, the contractor engaging and paying his own help and being himself paid according to the quantity of fish packed. Approximately 80 per cent of the number of factory workers recorded in the British Columbia salmon canneries are given under the classification of "piece worker". Following is the method used in arriving at the total number of employees: on the report of each establishment an addition is made of the number of wage-earners shown for each month, and the resulting total is divided by the number of months the plant was in operation during the year. For example, a cannery employs 12 persons in May, 14 in June, 12 in July, and 10 in August—a total of 48. This total is divided by the number of months in operation, viz., 4, and the result gives the number of wage-earners for the establishment as 12. To this number are added the number of salaried employees and the number of piece workers, which are recorded for the year or season and not by months. The final figure will be the number of employees credited to the establishment for the year, and the compilation of these totals provides the number of employees in the industry. Employment in the establishments is greatest during the summer months, with the peak in June. Work in many of the plants, especially the lobster canneries, is intermittent, depending largely on the volume of fish brought in for processing. When a large quantity is received, extra help is required, and employment is given to an additional number of persons, many of them women, for two or three days in the week. No distinction is made in the monthly statistics of employment between full time and part time employees.

The total salary and wage bill for the year was $4,227,955, recorded by classification of employment as follows: for salaried employees, $772,493; for wage-earners, $2,775,425; and for piece workers, $680,037. Compared with the preceding year the total amount shows an increase of $185,390.

The following table gives the number of employees, by classification fo employment, and the payments to each group in 1938 and in each of the two preceding years.

7. Employees in Fish Canning and Curing Establishments in 1936, 1937 and 1938 — Number and Salaries and Wages

Year	Employees on Salaries		Employees on Wages		Piece-Workers		Total of Employees and of Salaries and Wages	
	no.	$	no.	$	no.	$	no.	$
1936	558	734,678	10,073	2,544,903	4,607	724,269	15,238	4,003,850
1937	602	722,651	9,671	2,632,120	3,771	687,794	14,044	4,042,565
1938	642	772,493	9,092	2,775,425	4,750	680,037	14,484	4,227,955

Wage-earners by Months.—Employment in the industry as a whole is at its height in the months of May and June, being influenced by lobster canning operations, which are confined mainly to these two months. Work is found in the salmon canneries from May to October, while in many of the fish curing establishments and clam and sardine canneries, employment is given during the entire year. The following table presents the statistics of employment of wage-earners by months in the years 1936 to 1938.

8. Wage-earners in Fish Canning and Curing Establishments—Number on Pay Roll each month, 1936, 1937 and 1938 (a)

(a) Exclusive of piece workers

Materials Used.—The quantity of fish absorbed by the plants during the year 1938 was 7,826,520 cwt., or 79 per cent of the total catch for the sea fisheries of the Dominion. This compares with a total of 7,431,030 cwt. used, and a relation to catch of 75 per cent, in the preceding year. The remainder of the catch is marketed directly by the fishermen, either as fresh or domestically prepared.

The quantities and values of the fish and other kinds of materials used will be found, for the years 1936 to 1938, in the following table.

9. Quantity and Value of Materials Used in Fish Canning and Curing Establishments, 1936, 1937 and 1938

Materials		1936		1937		1938	
		Quantity	Value	Quantity	Value	Quantity	Value
			$		$		$
Fish	cwt.	7,786,296	11,916,080	7,431,030	12,179,219	7,826,520	12,589,724
Edible oils	gal.	178,208	137,144	182,171	133,998	217,308	104,043
Salt	cwt.	535,326	256,651	406,340	208,510	381,461	206,797
Containers		–	3,672,437	–	3,353,174	–	3,728,603
Other materials		–	477,626	–	443,880	–	452,893
Total		–	**16,459,938**	–	**16,318,781**	–	**17,082,060**

Production.—The output of the establishments in 1938 had a total value of $27,949,208, of which the amount of $21,896,811 is credited to the canned, cured or otherwise prepared product, and $6,052,397 to the fish marketed for consumption fresh. The total value shows an increase over the preceding year of $1,860,583, or 7 per cent. To the total value in 1938 the several classifications contributed as follows: salmon canneries, 50 per cent; fish curing establishments, 27 per cent; lobster canneries, 8 per cent; sardine and other fish canneries, 8 per cent; reduction plants, 4 per cent; freezing plants, 2 per cent; and clam canneries, 1 per cent. British Columbia, with its large salmon canning industry, occupies first place among the provinces with respect to total value of output, and second is Nova Scotia, dependent mainly on its freezing plants and lobster canneries. The position of each province in relation to the total for the Dominion, is shown by the following statement of percentages: British Columbia, 64 per cent; Nova Scotia, 23 per cent; New Brunswick, 9 per cent; and Quebec and Prince Edward Island, each 2 per cent. The value of production of the establishments in 1938 represents 83 per cent of the total marketed value of the sea fisheries for the year. The remainder—17 per cent—is marketed by the fishermen, directly, either as domestically prepared or for consumption fresh.

The following table gives for each classification of establishment, the value of output, divided between that sold for consumption fresh and the prepared product, in the years 1936 to 1938.

10. Value of Production of Fish Canning and Curing Establishments, 1936, 1937 and 1938

Description of establishment	1936			1937			1938

General Tables.—A section of the general tabular matter of the report is devoted to the statistics of fish canning and curing establishments, and in this section information regarding capital, employees, salaries and wages, value of production, and other phases, which has been briefly summarized in the foregoing paragraphs, is given in detail, by provinces and by counties or districts.

Review of the Fisheries by Provinces

The following tables (11-17) show by provinces: the total value of the fisheries; the quantity caught and landed and the value marketed of the chief commercial fishes; the quantity and value of all fish caught and landed and marketed; the total values for counties or districts of sea fish caught and landed and marketed; the quantity of sea fish taken offshore; the capital equipment; and the number of employees.

11. Value of the Fisheries by Provinces, 1934-1938, in Order of Value, 1938

FISHING BOUNTY

Under the authority of "An Act to Encourage the Development of the Sea Fisheries and the Building of Fishing Vessels" the sum of $160,000 is appropriated annually by the Governor in Council. It is distributed under the name of Fishing Bounty by the Department of Fisheries amongst fishermen and fishing vessel and boat owners on the Atlantic coast, under regulations made from time to time by the Governor in Council.

For the year 1938, payment was made on the following basis:—

To owners of vessels entitled to receive bounty—$1 per registered ton; payment to the owner of any one vessel not to exceed $80.

To vessel fishermen entitled to receive bounty—$6.00 each.

To owners of boats measuring not less than 12 feet keel—$1 per boat.

To boat fishermen entitled to receive bounty—$5.55.

The total amount paid in 1938 was $159,982.70, allocated as follows:—

To 734 vessels and their crews.....$ 35,642.30

To 11,660 boats and their crews.....$ 124,340.40

FOREIGN TRADE

Exports.—The total value of Canadian fish and fishery products exported during the calendar year 1938 was $27,543,680, compared with $28,902,152 in 1937 and $25,398,102 in 1936. The principal items in 1938, in order of value, were canned salmon ($7,128,194); fresh lobster ($1,952,697); canned lobster ($1,898,838); fresh and frozen whitefish ($1,514, 870); and dried cod ($1,175,645). The total value of all fresh and frozen fish exported during the year was $11,344,363; of processed fish (canned, salted, smoked, etc.) $13,965,030; of fish oils $975,491; and of miscellaneous fishery products, $1,258,796. The chief countries of destination are the following: the United States ($12,713,819); the United Kingdom ($6,880,661); Australia ($1,932,655); British West Indies (comprising Barbadoes, Jamaica, Trinidad and Tobago and other) ($946,528); France ($691,833); Germany ($687,844); British South Africa ($621,345); and New Zealand ($522,680). Altogether there were 87 countries to which Canadian fish and fishery products went in 1938, and the list of exports includes 58 separate items.

Imports.—The value of the fish and fishery products imported for consumption was $3,036,227, compared with $2,877,131 in the preceding year and $2,918,251 in 1936. Fresh salmon from the United States, Newfoundland and Alaska; oysters from the United States; sardines from Norway, France, Italy and Portugal and cod liver oil from the United Kingdom, the United States, Newfoundland and Norway comprise the chief imports.

The following table gives values of exports and imports in the years 1926 to 1938.

VALUES OF EXPORTS AND IMPORTS OF FISH AND FISHERY PRODUCTS IN THE YEARS ENDING DECEMBER 31, 1926 TO 1938

Year	Exports	Imports	Year	Exports	Imports
	$	$		$	$
1926	37,089,545	3,045,838	1933	20,223,610	1,694,325
1927	34,814,448	3,768,901	1934	22,497,135	2,121,762
1928	38,096,245	4,068,074	1935	24,859,486	2,597,856
1929	37,546,393	4,233,906	1936	25,398,102	2,918,251
1930	31,869,350	3,446,601	1937	28,902,152	2,877,131
1931	25,848,585	2,653,894	1938	27,543,680	3,036,227
1932	18,752,107	1,862,337			

HISTORICAL REVIEW

The five tables following will afford a review of the fishing industry of Canada for the past several years. In the case of production, returns are given, by provinces, back to 1870. In the case of the number and value of vessels, boats, etc., the review extends to 1880, and in the case of the number of employees to 1895.

18. Historical Review—(a) Total Value of the Fisheries in the Respective Provinces of Canada, for the years 1870 and 1875 to 1938

Year	Prince Edward Island	Nova Scotia	New Brunswick	Quebec	Ontario	British Columbia	Manitoba, Saskatchewan, Alberta and Yukon	Total for Canada
	$	$	$	$	$	$	$	$
1870	Not known	4,019,425	1,131,433	1,161,551	264,982	Not known	Not known	6,577,391

19. Table for Conversion of Weights of Fish

Fresh fish in this table in the case of cod, haddock, hake and cusk, pollock and halibut (Atlantic) means fish with the head on and the entrails removed. The weight of halibut on the Pacific cost is to be the weight minus head and entrails. In the case of swordfish and tuna, it means fish with the head, tail and entrails removed. In all other cases, fresh fish means fish as it comes from the water.

COD, HADDOCK, HAKE AND CUSK OR POLLOCK

300 lb. of fresh produce one cwt. of fresh fillets.
160 lb. of fresh produce one case of canned.
200 lb. of fresh produce one cwt. of green salted.
300 lb. of fresh produce one cwt. of smoked fillets.
200 lb. of fresh produce one cwt. of smoked.
300 lb. of fresh produce one cwt. (100 lb.) of dried.
400 lb. of fresh produce one cwt. of boneless.

HERRING

70 lb. of fresh produce one case of canned.
200 lb. of fresh produce one cwt. of smoked.
300 lb. of fresh produce one barrel of pickled.
200 lb. of fresh produce one barrel of bait (fresh or salted).
200 lb. of fresh produce one barrel of fertilizer.
125 lb. of fresh produce one cwt. of dry salted.

MACKEREL OR SHAD

70 lb. of fresh produce one case of canned.
300 lb. of fresh produce one barrel of pickled.
400 lb. of fresh produce one barrel of salt mackerel fillets.

SARDINES

One barrel of fresh produces 4 to 5 cases canned.
(One case of 25 lb. equals 100 tins $\frac{1}{4}$ lb. each.)

PILCHARDS

70 lb. of fresh produce one case of canned.
200 lb. of fresh produce one barrel of bait.

ALEWIVES

200 lb. of fresh produce one cwt. of smoked.
275 lb. of fresh produce one barrel of pickled.

SALMON

84 lb. of fresh (Pacific) produce one 48-lb. case canned.
70 lb. of fresh (Atlantic) produce one 48-lb. case canned.
170 lb. of fresh produce one cwt. of smoked.
125 lb. of fresh produce one cwt. of dry salted.
150 lb. of fresh produce one cwt. of mild cured.
150 lb. of fresh produce one cwt. of pickled.

TUNA

100 lb. of fresh produce one case canned.

CLAMS

Atlantic Coast—200 lb. of fresh produce one case of canned. (48 tins of 5 oz. of clam meat each).

Pacific Coast—
Razor clams—80-lb. of fresh produce one case of canned. (48 tins of 6 oz. of clam meat each).
Little neck, butter clams, etc.—150 lb. of fresh produce one case of canned. (48 tins of 6 oz. of clam meat each).

CRABS

800 lb. of fresh produce one case of canned.

LOBSTERS

200 lb. of fresh produce one case of canned. (48 tins of 12 oz. of lobster meat each.)
500 lb. of fresh produce one cwt. of lobster meat.

To British Empire	11,178,572	11,457,680
To Foreign Countries	17,723,580	16,086,000

III. (3) Statement showing the Exports of Dried Cod from the Chief Exporting Countries during the years 1936, 1937 and 1938 (a)

(Quantities in hundredweights of 100 lbs.)

Country	1936	1937	1938
	cwt.	cwt.	cwt.
Norway (b)	1,231,660	1,596,192	1,486,914
Newfoundland (c)	1,381,202	1,081,583	890,980
Iceland (d)	607,500	574,629	454,941
France	493,502	601,624	440,483
United Kingdom	246,475	270,601	332,356
Canada	213,444	205,992	210,278

(a) The information is obtained from the Trade Reports of the several countries. Where the metric system is used the quantities are reduced to hundredweights by using the proportion of 220·46 quintals to 100 pounds. The United Kingdom's hundredweight of 112 pounds and Newfoundland's quintal of 112 pounds are likewise reduced to the equivalent of the hundredweight of 100 pounds.

(b) The Norwegian figures comprise:
In 1936: 794,825 cwt. klipfish and 436,835 cwt. stockfish.
In 1937: 851,437 cwt. klipfish and 744,755 cwt. stockfish.
In 1938: 913,586 cwt. klipfish and 573,328 cwt. stockfish.

(c) Year ended June 30.

(d) The Icelandic figures comprise:
In 1936: 595,132 cwt. klipfish and 12,368 cwt. stockfish.
In 1937: 555,780 cwt. klipfish and 18,849 cwt. stockfish.
In 1938: 444,668 cwt. klipfish and 10,273 cwt. stockfish.

Totals	**19,884,332**	**18,866,479**	**18,057,328**	**21,038,515**

During the calendar year 1938 three steam trawlers were in operation.

The following statement, prepared from Canadian fisheries statistics for the year shows the catches by Canadian fishermen in 1938 in certain areas, defined by the North American Council on Fishery Investigations, an international body representative of Canada, United States, Newfoundland and France for the co-ordination of fishery investigations in the Atlantic waters of the Continent. The boundaries of the areas are indicated on the accompanying chart.

III. Miscellaneous—(9) Fisheries Production in 1938 in Certain Areas Defined by the North American Council on Fishery Investigations

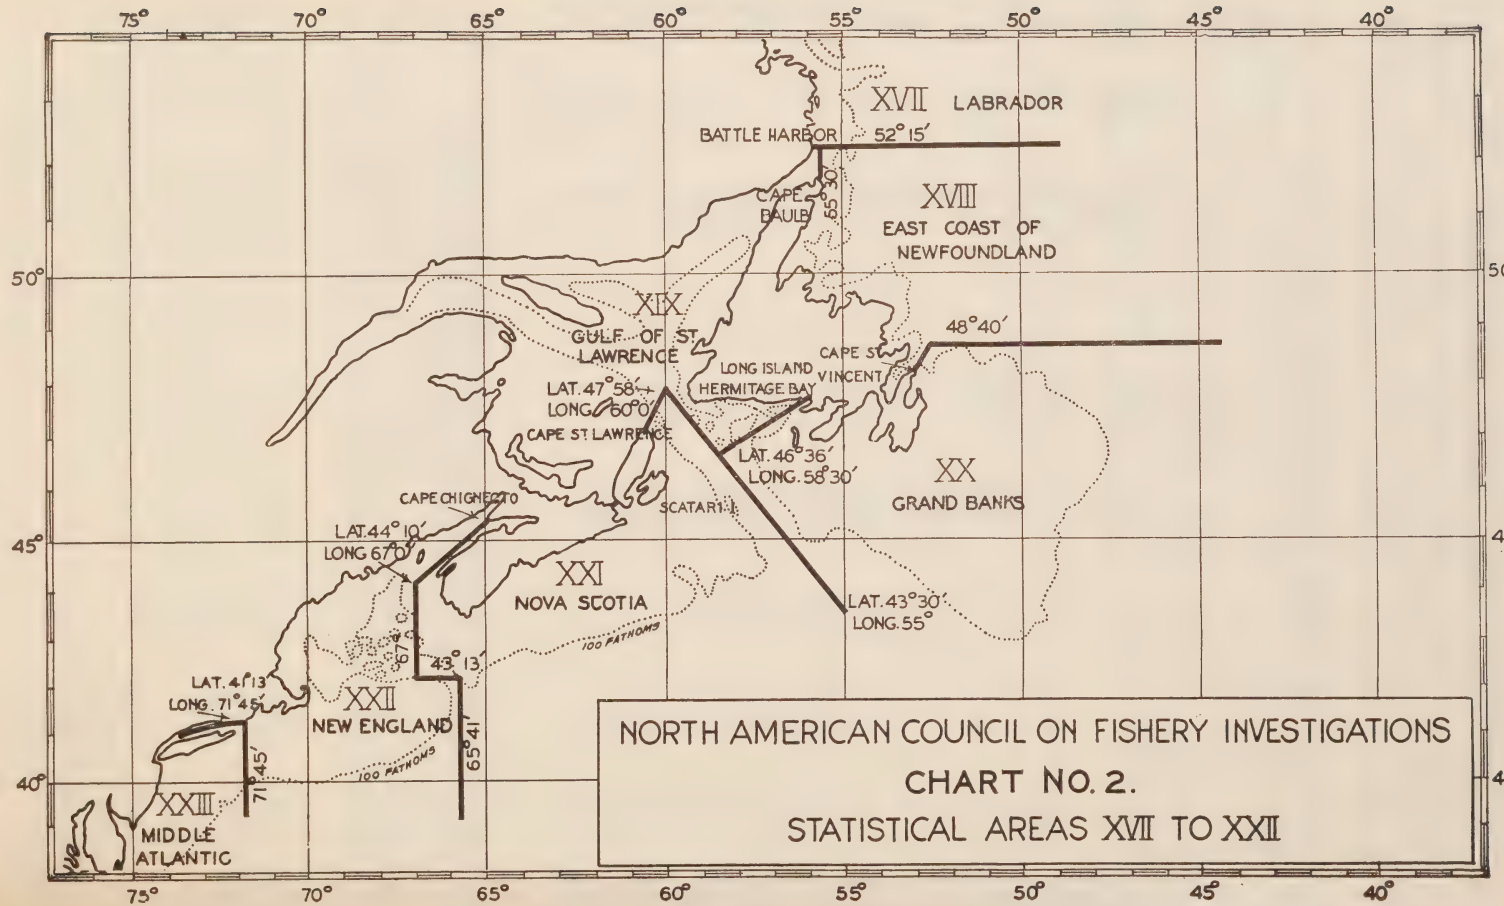

Kind of Fish	Area No. 19 (a)	Area No. 20 (b)	Area No. 21 (c)	Area No. 22 (d)	Total
Cod.....cwt.	476,370	362,376	817,806	26,836	1,683,388

PRÉFACE

Ce rapport est publié en vertu d'une entente établissant la coopération en matière de statistique entre le Bureau Fédéral de la Statistique et les différents services gouvernementaux ayant juridiction sur les pêcheries canadiennes. Ces services comprennent le Ministère fédéral des Pêcheries, qui exerce sa juridiction sur les pêcheries des Provinces Maritimes, du Yukon, de la Colombie Britannique et des Iles-de-la-Madeleine, et les divisions des Pêcheries des provinces d'Ontario, Québec, Manitoba, Saskatchewan et Alberta, qui régissent les pêcheries de leurs provinces respectives, sauf les pêcheries des Iles-de-la-Madeleine, en Québec, lesquelles sont sous la juridiction du Ministère des Pêcheries du Dominion. La Colombie Britannique possède une division des Pêcheries, mais cet organisme ne s'occupe pas de statistique pour son propre compte.

En vertu de l'arrangement dont il est parlé plus haut, les statistiques du poisson pêché et des produits offerts en vente à l'état frais ou après une préparation sommaire, sont recueillies par les fonctionnaires locaux du Ministère des Pêcheries, vérifiées et condensées au Ministère des Pêcheries, puis compilées au Bureau Fédéral de la Statistique. En ce qui concerne le poisson industriellement préparé et ses sous-produits, des formules similaires à celles en usage dans le recensement des autres branches de la production sont envoyées directement par le Bureau aux usines poissonnières, les fonctionnaires des services des Pêcheries s'assurant que ces formules sont consciencieusement remplies et promptement retournées. Les fonctionnaires des gouvernements provinciaux voudront bien accepter nos remerciements pour le concours qu'ils nous ont prêté.

R. H. COATS,
Statisticien du Dominion.

Bureau Fédéral de la Statistique,
Ottawa, le 7 novembre 1939.

LES PÊCHERIES DU CANADA

Le début des pêcheries.—*La pêche est une des plus anciennes industries du Canada. Laissant de côté les traditions et les légendes pour s'en remettre aux faits établis, il faut admettre que c'est à Jean Cabot que revient l'honneur d'avoir découvert, en 1497, les bancs de morue de Terre-Neuve, quand il vit pour la première fois la terre ferme de l'Amérique du Nord. Il rapporta que la mer y était si poissonneuse qu'il était possible de pêcher "avec un panier dans lequel il y avait une pierre pour le faire plonger". Cap-Breton, l'un des plus anciens noms géographiques de l'Amérique, est un souvenir des premiers pêcheurs français que les Espagnols et les Portugais ne tardèrent pas à suivre. Fernandez de Navarette nous apprend que des pêcheurs de ces trois nationalités fréquentaient le Grand Banc en 1502. La pêche se pratiquait au moyen de lignes à mains passées sur des barils fixés à l'extérieur du passavant pour éviter le contact des lignes avec les flancs du navire; les bateaux de pêche se livraient à leurs opérations tant que durait le beau temps, puis s'en retournaient en France avec leurs prises de 30,000 à 50,000 morues. Les voyages entrepris le long du littoral démontrèrent bientôt que la morue était aussi abondante en vue du rivage que sur les bancs lointains, et les équipages s'accoutumèrent alors à jeter l'ancre dans une baie, à construire une hutte sur la grève et à faire dans leurs petites chaloupes des excursions quotidiennes dont le produit était salé et séché à terre, puis expédié en France à la fin de la saison. Lorsqu'il remonta le Saint-Laurent en 1534, Jacques Cartier trouva partout les traces du passage de ces "capitaines courageux" et de leurs rivalités, lesquelles s'exerçaient aussi bien dans des rencontres armées que dans la capture du poisson qui les avait attirés si loin de chez eux. Chauvin fonda un établissement de cette sorte à Tadoussac, en 1599. Bientôt après les pêcheurs s'habituèrent à passer l'hiver en Amérique et à y construire de véritables villages. La première concession de pêche fut octroyée par le roi de France à de Monts, en 1603. On peut donc considérer la pêche comme la première industrie à laquelle se soient livrés systématiquement les Européens au Canada; depuis ces temps lointains elle n'a jamais cessé de donner sa récolte annuelle.*

Lieux de pêche du Canada.—*Les pêcheries canadiennes sont probablement les plus vastes de l'univers. Sur l'Atlantique, depuis Grand Manan jusqu'au Labrador, le rivage mesure plus de 5,000 milles, à l'exclusion des anses et échancrures qui le dentellent. La baie de Fundy avec 8,000 milles carrés, le golfe Saint-Laurent dix fois plus grand, et d'autres eaux océaniques représentent ensemble environ 200,000 milles carrés, c'est-à-dire plus des quatre cinquièmes des pêcheries du nord de l'Atlantique. De plus, l'on compte sur les bords de l'Atlantique 15,000 milles carrés d'eaux territoriales sous le contrôle absolu du Dominion. Mais ces vastes étendues ne représentent qu'une partie des eaux canadiennes. Sur le Pacifique, le littoral canadien mesure 7,180 milles; ses baies et fiords innombrables offrent aux pêcheurs une multitude d'abris très sûrs. Enfin, disséminés sur tout le territoire s'égrènent une série de lacs qui, tous ensemble, contiennent plus de la moitié des eaux douces du globe, la part du Canada dans les Grands Lacs seulement couvrant plus de 34,000 milles carrés, auxquels viennent s'ajouter le lac Winnipeg (9,457 milles carrés), le lac Manitoba et de nombreux autres non moins vastes.*

Mais la qualité des produits des pêcheries canadiennes est encore plus remarquable. Chacun sait que l'excellence de la chair du poisson est en proportion directe de la pureté et de la fraîcheur des eaux qu'il habite. Considérés sous cet angle, le saumon, la morue, le flétan, le hareng, le maquereau et le corégone du Canada n'ont pas de rivaux dans l'univers. Il est donc évident que les plus magnifiques pêcheries de l'hémisphère occidental, sinon du globe, appartiennent au Canada.

Le bref exposé qui précède démontre qu'il est impossible d'envisager les pêcheries canadiennes sous un unique aspect; embrassant tout un continent, elles offrent nécessairement une grande diversité. Laissant de côté la baie d'Hudson et la région subarctique qui s'étend depuis l'Ungava jusqu'à l'Alaska, on peut diviser comme suit les pêcheries canadiennes:

1. Pêcheries de l'Atlantique.—*Elles sont les premières en date et, jusqu'en 1918, elles furent les plus importantes par la valeur de leurs produits. On y prend la morue, le flétan, l'églefin, le hareng, le maquereau, l'éperlan, la sardine, l'espadon, le saumon, le homard et l'huître. Les opérations de pêche sont communément considérées sous deux aspects distincts, la pêche hauturière ou de haute mer et la pêche côtière. Cette dernière se pratique au moyen de petites embarcations le plus souvent automotrices, montées par deux ou trois hommes; on y emploie aussi de petits navires dont l'équipage se compose de quatre à sept hommes. Les engins de pêche le plus fréquemment employés sont les rets à mailles, les lignes à main et les chaluts; d'autre part, on dispose le long du rivage des filets, des seines et des nasses. L'églefin, comme la morue, est un produit de consommation courante; le printemps et l'été ce poisson est ouvert et salé mais la meilleure saison est l'automne, le poisson étant alors expédié frais ou fumé. La pêche en haute mer se pratique au moyen de navires de 40 à 100 tonnes, portant de douze à vingt hommes, qui pêchent surtout dans des doris au moyen de lignes de fond; en outre, on pêche parfois directement des navires au moyen de lignes à main. Les flotilles fréquentent tout à tour les différents bancs de pêche tels que le Grand Banc, le Banc Intermédiaire et le Banquereau. Ces navires, construits sur place, restent parfois plusieurs mois en mer; les naufrages sont rares, tant est grande l'habileté de leurs équipages. A leur retour, le poisson, qui a été vidé et salé à bord, est débarqué, lavé et séché. Les Antilles sont le principal débouché de ce produit; aucune autre morue ne pourrait supporter le climat tropical aussi bien que celle préparée par les pêcheurs de la Nouvelle-Ecosse. De grands chalutiers à vapeur, tels que ceux en usage dans la mer du Nord, ont été introduits depuis plusieurs années dans les pêcheries canadiennes du littoral de l'Atlantique. Ces chalutiers se livrent à la pêche presque toute l'année; leurs prises approvisionnent le commerce de poisson frais. En vertu de la loi des pêcheries, les chalutiers doivent être inscrits comme navires britanniques au Canada, appartenir à des gens du Canada et être pourvus d'un permis émanant du ministre des Pêcheries; leurs opérations doivent se restreindre aux eaux situées à 12 milles au moins du littoral.*

La pêche du homard est une industrie caractéristique. En 1870, il n'existait que trois homarderies sur le littoral de l'Atlantique; en 1938 on en compte 215, occupant près de 5,000 personnes; 30,000,000 de homards constituent une prise normale. En outre du homard en boîte, une forte quantité est mise sur le marché en carapace, dont la majeure partie est exportée aux Etats-Unis. L'un des constants problèmes de cette industrie, c'est d'assurer l'exécution des dispositions prohibant la capture des jeunes homards et des adultes au moment du frai; on croit qu'avec la coopération des pêcheurs le rendement de cette pêche peut se maintenir. Au Nouveau-Brunswick, la mise en boîte des sardines, qui sont de jeunes harengs et non une espèce distincte, est la principale industrie poissonnière. Grâce à l'ostréiculture, que le Gouvernement a développée, l'huître autrefois abondante mais qui avait de beaucoup diminué pendant un certain nombre d'années reprend sa position importante de jadis. On a mis du naissain dans les endroits favorables des eaux de l'Ile du Prince-Edouard et de la Nouvelle-Ecosse. Ce travail est dirigé par des experts en ostréiculture.

Les pêcheurs des Provinces Maritimes constituent une population industrielle spécialisée. La pêche côtière s'y pratique d'avril à novembre et même en janvier dans les districts abrités et, quoique les plus grands navires travaillent pendant tout l'hiver, plusieurs milliers d'hommes sont disponibles à certains moments de l'année pour d'autres travaux. Les uns cultivent des parcelles de terre entourant leurs maisons, les autres travaillent dans les chantiers de bois du Nouveau-Brunswick ou bien dans les charbonnages de la Nouvelle-Ecosse. Quelques pêcheurs de Lunenburg et d'ailleurs font du négoce avec les Antilles. Outre les restrictions imposées par la température et les saisons fermées, la méthode généralement répandue de payer les hommes au tantième tend encore, les années où la prise et les prix sont faibles, à les attirer vers les occupations secondaires.

2. Pêcheries intérieures.—*Les Grands Lacs et les eaux tributaires du St-Laurent constituent une deuxième grande division des pêcheries canadiennes. La valeur des pêcheries intérieures du Québec se compose principalement de produits de la pêche à l'anguille, au doré et à l'esturgeon. En Ontario, le corégone, la truite, la sandre, le hareng des lacs, la perche, le doré et le tullibee sont les poissons les plus importants, commercialement parlant, quoique le brochet, l'esturgeon et quelques autres poissons ne soient pas à dédaigner. Dans les Grands Lacs la saison de pêche dure de six à huit mois; quelques pêcheurs continuent leurs opérations durant l'hiver en creusant des trous dans la glace, mais le plus grand nombre cherchent une autre occupation dans l'intermède des saisons. En se dirigeant plus à l'ouest, le lac Winnipeg, le lac Winnipegosis, le lac Manitoba et des lacs plus petits au nord et à l'est de celui-ci, fournissent la plupart des poissons du Manitoba. Le corégone et le doré sont les principaux d'entre eux, mais le brochet, le tullibee, l'œil-d'or et nombre d'autres variétés s'y trouvent aussi. En Saskatchewan et en Alberta, la pêche pour le commerce est confinée aux régions situées au nord de la rivière Saskatchewan où l'on prend de grandes quantités de corégone. Les difficultés du transport n'ont pas encore été surmontées; quelques-uns des plus grands lacs du continent, les lacs Reindeer, Grand Esclave, Grand Ours et des centaines de lacs plus petits n'ont aucune communication avec les marchés de consommation. Toutefois, les lacs de l'Ouest jouent le même rôle que le St-Laurent au temps du régime français et que les bancs de morue dans l'histoire de la Nouvelle-Angleterre, en facilitant la colonisation du pays, puisqu'ils offrent un aliment certain aux colons nouvellement arrivés.*

3. Pêcheries du Pacifique.—*La Colombie Britannique possède des pêcheries d'eau douce presque similaires à celles de la région des Prairies; il est douteux que le commerce des fourrures (qui devait être l'agent de liaison entre cette province et le reste du Canada à travers les Montagnes Rocheuses) eût pu s'établir au commencement de l'histoire de cette province si ces pêcheries n'eussent pas existé. Les pêcheries de la Colombie Britannique sont d'une grande richesse; elles représentent environ les deux cinquièmes de l'industrie poissonnière du Canada et ses produits se consomment jusqu'aux extrémités de la terre; ils sont essentiellement constitués par le saumon pêché à l'embouchure du fleuve Fraser, de la Skeena, de la Naas et d'autres rivières qui descendent le versant occidental des montagnes. Chacune des variétés de ce roi des poissons comestibles (qui toutefois n'est pas le* salmo salar *ou vrai saumon) fréquentant les eaux du Pacifique se trouve sur le littoral de la Colombie Britannique, c'est-à-dire le sockeye ou dos bleu, le saumon de printemps, le saumon argenté, le saumon rose et le saumon bécard. Entre tous ceux-ci, le sockeye, bien qu'il ne donne pas d'aussi fortes prises que le saumon rose et le bécard, est de beaucoup le plus important, en raison de l'excellence de sa chair, dont la belle couleur rougeâtre est tant appréciée des consommateurs de la Grande-Bretagne et des pays étrangers. Le fleuve Fraser était autrefois la principale source d'approvisionnement de saumon, mais sa production est aujourd'hui dépassée par celle des eaux septentrionales; la prise varie considérablement d'année en année. La montée du saumon commence vers la fin de juillet et atteint son apogée dans les premières semaines d'août; néanmoins, les régions septentrionales ont une saison plus hâtive. Le saumon de printemps ou quinnat est un très gros poisson, c'est la première espèce qui fut mise en boîte aux Etats-Unis; la migration de ce poisson s'opère au commencement du printemps et se continue jusqu'en juillet. Le saumon argenté est plus petit; comme le sockeye, il voyage par bandes innombrables, pendant septembre et octobre, dans le fleuve Fraser, et un peu plus tôt dans les cours d'eau plus au nord. Le saumon bécard est mis en boîte et une quantité considérable est salée pour l'exportation en Orient. La montée du saumon rose se produit environ trois ou quatre semaines après celle du sockeye.*

Le flétan abonde à hauteur de l'île Vancouver et entre les îles de la Reine Charlotte et le continent; quoique la première tentative d'exploitation industrielle de ce poisson ait avorté, dès 1903 la Colombie Britannique contribuait pour 10,000,000

de livres à la production de 25,000,000 de livres pêchées sur le littoral du Pacifique au nord de la Californie, chiffre qui a triplé depuis plusieurs années, bien que depuis 1930 cette pêche ait diminué à la suite des restrictions imposées en vertu des dispositions du traité conclu entre le Canada et les Etats-Unis pour la conservation de ces pêcheries. Le hareng est pris en grandes quantités par les pêcheurs de la Colombie Britannique et il est surtout employé à la préparation de produits salés à sec (pour exportations à la Chine et au Japon) et à la production d'huile et de poudre. Le pilchard, qui est de la famille du hareng et pour lequel les rapports au Canada n'ont trait qu'à la prise du littoral du Pacifique, occupe le troisième rang parmi les principaux poissons de commerce de la Colombie Britannique. La production de pilchard en boîte est considérable, mais les principaux item de production de la pêche sont l'huile et la poudre. On y pêche aussi la baleine et deux stations sont en opération dans les îles de la Reine Charlotte. On y pêche des cétacés de différentes sortes: baleines franches, rorquals, dauphins et cachalots. La pêche à la baleine se pratique dans des bateaux rapides armés de canons lance-harpons Svend Foyn, système venu de Norvège. Aucune partie de la baleine ne se perd, l'huile et la poudre ou engrais en sont les produits les plus importants. Le cabillaud, la lingue, l'oulachon, le turbot, la raie, la sole, la coque et l'huître sont également abondants dans les eaux de la Colombie Britannique.

Il convient d'ajouter un mot concernant les pêcheries de phoque à fourrure du Pacifique dont le siège historique était autrefois à Victoria. Au début du siècle actuel, par suite de la raréfaction des animaux, cette industrie n'avait plus qu'une bien faible importance, et en 1911 un traité fut conclu entre la Grande-Bretagne, les Etats-Unis, le Japon et la Russie, à l'effet d'interdire la pêche pélagique ou hauturière. Ce traité, qui est resté en vigueur, a pour objet la conservation du phoque et il en est résulté un accroissement considérable des bandes de ces animaux. A titre de compensation pour la renonciation à ses droits de pêche au phoque, le Canada touche annuellement des gouvernements des Etats-Unis, du Japon et de la Russie une part du revenu de la pêche du phoque aux îles Pribaloff et à d'autres endroits, appartenant à ces trois pays, où se trouvent des colonies de phoques. Les Indiens de la Colombie Britannique sont exempts des dispositions de ce traité, mais ils ne peuvent pratiquer ce genre de chasse qu'à l'aide de bateaux non pontés, dont chacun ne peut avoir un équipage de plus de cinq personnes, l'emploi d'armes à feu leur étant interdit.

Le sport de la pêche.—*Le relevé ci-dessus est purement industriel et commercial; mais le sport de la pêche comporte un aspect économique dans un pays où foisonnent des poissons aussi réputés que le saumon de la Restigouche et autres rivières du Nouveau-Brunswick, l'achigan et la truite mouchetée du Québec et des hautes terres d'Ontario, la truite rouge du Nipigon et le saumon et la truite arc-en-ciel de la Colombie Britannique. Le gouvernement perçoit des revenus très élevés en louant soit à des clubs, soit à des particuliers, le droit de pêche dans les lacs et les cours d'eau des contrées les moins peuplées; d'autre part, des centaines de guides y trouvent une occupation pendant les mois d'été.*

LE GOUVERNEMENT ET LES PÊCHERIES

Dès l'organisation du Gouvernement fédéral à la Confédération, le Ministère de la Marine et des Pêcheries administrait les pêcheries canadiennes. De bonne heure en 1930 un ministère des Pêcheries, sous la direction d'un ministre, a été organisé. Ce ministère administre maintenant toutes les pêcheries en eau salée (excepté celles de la partie continentale du Québec qui, en vertu d'un accord, relèvent de l'administration provinciale), les pêcheries en eau douce de la Nouvelle-Ecosse et les pêcheries du Yukon et des Territoires du Nord-Ouest. Les pêcheries en eau douce du Nouveau-Brunswick, de l'Ile du Prince-Edouard, de l'Ontario, des Provinces des Prairies et de la Colombie Britannique, et les pêcheries du Québec, tant

* Revisé sous la direction de J. J. Cowie, sous-ministre suppléant, Ministère des Pêcheries, Ottawa.

en eau salée qu'en eau douce, (excepté celles des Iles-de-la-Madeleine) sont administrées par les provinces respectives, bien que le ministère fédéral exécute certains travaux de protection dans les eaux douces du Nouveau-Brunswick, de l'Ile du Prince-Edouard et de la Colombie Britannique. Cependant, le Gouvernement fédéral possède seul le droit de légiférer sur les pêcheries. (Voir loi des pêcheries, 22–23 Geo. V, c. 42.) L'année fiscale 1938–39 les dépenses du Dominion pour les pêcheries, y compris les salaires du gouvernement civil, les contingences, etc., sont de $2,568,443 et les recettes, de $112,778.

Conservation.—*Les pêcheries fluviales et lacustres incontestablement et les pêcheries maritimes probablement, si elles étaient abandonnées à elles-mêmes, subiraient la loi économique de l'appauvrissement. Pour combattre cette tendance le Gouvernement canadien dut légiférer, interdisant la pêche en certaines saisons, la pollution des rivières et l'obstruction de leur cours; il dut aussi spécifier les dimensions des mailles de filets, réglementer les agrès et les opérations de pêche. En outre, un vaste système de pisciculture a été organisé. En 1938 le Dominion a exploité 13 frayères, 1 vivier auxiliaire, 6 aleviniers, 8 bassins à saumon et plusieurs stations de cueillette des œufs, ayant coûté $233,408 et ayant distribué 33,685,000 alevins et poissons des espèces saumon et truite. La distribution s'est faite dans des eaux appropriées choisies. Depuis 1929 le Ministère fédéral des Pêcheries a poursuivi avec succès dans l'Ile du Prince-Edouard des recherches et des expériences en vue d'établir l'ostréiculture commerciale; depuis quelque temps ces opérations s'étendent à la Nouvelle-Ecosse. Le gouvernement de chacune de ces provinces a transféré à l'autorité fédérale le contrôle des régions huîtrières. Dans les deux autres provinces productrices d'huîtres, le Nouveau-Brunswick et la Colombie Britannique, le contrôle des régions est entre les mains de la province, sauf une petite bande du littoral du Nouveau-Brunswick dont les régions ont été tranférées par le gouvernement provincial au contrôle du Ministère fédéral des Pêcheries, pour y poursuivre certaines recherches.*

Aide directe.—*Sur la côte de l'Atlantique où les conditions qui accompagnent les opérations de la pêche rendent un tel service désirable, il a été établi un système de radio qui émet des rapports sur les probabilités de la température, les approvisionnements de boitte et de glace et les conditions de la glace. Ces quelques dernières années le Ministère des Pêcheries a organisé des systèmes d'instruction sur les nouvelles méthodes de manutention du poisson, de saurissage, etc.*

Continuant le plan suivi pendant plusieurs années relativement à l'aide directe pour les pêcheurs nécessiteux, la somme de $500,000 a été allouée à cette fin à même les crédits du Ministère des Pêcheries pour l'année fiscale 1938-39. En coopération avec les gouvernements de la Nouvelle-Ecosse, du Nouveau-Brunswick, de l'Ile du Prince-Edouard et du Québec, 14,308 pêcheurs et 36 associations de pêchuers ont joui de prêts et subventions pendant l'année. Des fonds communs de secours ont été constitués en chaque province au moyen de contribution du ministère et du gouvernement provincial, et à même ces fonds les pêcheurs ont reçu de l'aide pour s'établir; les dépenses totales provenant des crédits alloués par le ministère se sont élevées à $369,443.

Le Ministère des Pêcheries a poursuivi encore pendant l'année une campagne nationale de réclame en faveur des aliments poissonniers, afin d'aider les pêcheurs en faisant augmenter la demande pour leurs produits. Environ $150,000 ont été dépensés à cette fin en 1937–38. Toute cette somme, sauf $15,000, a été dépensér au Canada. Un montant de $15,000 a été transféré au Royaume-Uni pour servir à alimenter la campagne de réclame "L'Appel du Canada" en faveur du saumon en boîte et du homard en boîte. En outre de la réclame dans le Dominion, le ministère a retenu les services de conférencières-démonstratrices ambulantes traitant de la cuisson du poisson, comme autre moyen d'augmenter l'usage des aliments poissonniers.

Recherches scientifiques.—*Sous la direction du Conseil de recherches sur les pêcheries (autrefois le Conseil biologique du Canada), des stations pour la poursuite de recherches sur les nombreux problèmes complexes relatifs aux pêcheries sont établies à Halifax, N.-E., St-Andrews, N.-B., Grande-Rivière, Québec, et Nanaimo et Prince-Rupert, C.B. Le Conseil dirige une autre station à Ellerslie, I.P.-E., pour recherches en ostréiculture principalement, et une sous-station à Cultus-Lake, C.B., pour recherches sur le saumon. Le Conseil emploie un personnel permanent de techniciens. Le cycle évolutif des poissons comestibles, la bactériologie du poisson frais ou sauri, l'amélioration des méthodes de manutention et de préparation du poisson, et de nombreux autres problèmes pratiques ont fait le sujet d'importants mémoires et rapports scientifiques.*

Problèmes internationaux.—*Des problèmes d'importance internationale concernant les pêcheries ont surgi de temps en temps sur les deux littoraux du Dominion, de même que dans la région des Grands Lacs où les problèmes sont compliqués par le nombre de gouvernements des Etats concernés. La question des privilèges des Etats-Unis dans les pêcheries canadiennes de l'Atlantique a été un problème international important. L'esquisse historique de cette question se trouve aux pages 233-234 de la* Statistique des Pêcheries, 1935. *Depuis 1933, en vertu de l'ancien système de* modus vivendi, *résultat du traité non ratifié de 1888, les vaisseaux des Etats-Unis ont encore reçu la permission d'entrer dans les ports canadiens pour acheter de la boitte et tous autres approvisionnements.*

Le Canada et les Etats-Unis ont pris ces dernières années des mesures conjointes pour traiter deux importants problèmes concernant les pêcheries du littoral du Pacifique—le premier est la protection de la pêche du flétan dans le Pacifique septentrional; l'autre est la protection, la préservation et l'extension des pêcheries de saumon sockeye dans le système du fleuve Fraser.

Le premier traité concernant les pêcheries de flétan a été signé le 2 mars 1923. En vertu de ce traité, la pêche du flétan est interdite pendant un certain temps chaque année et une commission internationale a été établie pour faire une enquête sur la pêche et le cycle évolutif du flétan. Une autre convention, signée à Ottawa le 9 mai 1930 et ratifiée par les gouvernements respectifs le 9 mai 1931, pourvoit à la réglementation de la pêche par la commission en divisant en zones de pêche les eaux visées par la convention, en changeant les dates des saisons prohibées, etc. Une nouvelle convention a été signée à Ottawa le 29 janvier 1937, étendant les pouvoirs de réglementation de la commission. Les mesures prises par la commission internationale en vertu des diverses conventions ont eu pour résultat d'améliorer continuellement l'état des pêcheries de flétan dans les eaux concernées.

La convention relative aux pêcheries de saumon sockeye a été signée à Washington le 26 mai 1930, mais l'échange de ratifications n'a pas eu lieu avant le 28 juillet 1937, bien que le Parlement canadien eût approuvé le traité plusieurs années avant cette date. Les eaux visées par la convention comprennent non seulement la ligne de partage des eaux du fleuve Fraser en Colombie Britannique, mais aussi certaines eaux canadiennes, américaines et internationales formant les abords du Fraser et où passe le sockeye du fleuve Fraser.

En vertu du traité relatif au sockeye, la Commission internationale des Pêcheries du saumon dans le Pacifique a été établie en 1937 et comprend trois membres nommés par le Canada et un nombre égal nommé par les Etats-Unis. La commission qui a établi son siège à New-Westminster, C.B., est autorisée par la convention à faire "une étude complète de l'histoire naturelle du saumon sockeye du fleuve Fraser, des méthodes de pisciculture, des conditions des frayères et autres sujets qui s'y rattachent", à diriger les activités de la culture du saumon sockeye dans les eaux visées par le traité et à recommander aux gouvernements "l'enlèvement ou tout autre moyen de faire disparaître les obstacles qui empêchent le saumon sockeye de remonter les cours d'eau désignés par la présente convention. . ." La convention a également

donné à la commission certains pouvoirs de réglementation, mais l'une des ententes conditionnant l'approbation du traité par les deux pays veut que "La commission ne doit pas promulguer ou mettre en vigueur des règlements avant que les recherches scientifiques prévues dans la convention n'aient couvert deux cycles de montée du saumon sockeye, soit huit ans".

Primes.—*Une loi de 1882 (45 Vict., c. 18), pour le développement des pêcheries maritimes et l'encouragement à la construction des navires de pêche, a consacré une somme annuelle de $150,000, représentant l'intérêt sur le montant de la sentence arbitrale d'Halifax, à la distribution de primes aux pêcheurs et aux propriétaires de bateaux de pêche sur l'Atlantique et à leurs équipages. Une autre loi, votée en 1891, (54-55 Vict., c. 42) éleva ces primes à $160,000, les détails de leur distribution étant réglés chaque année par arrêté ministériel.*

INDUSTRIE MODERNE

L'industrie de la pêche commerciale au Canada a commencé à prendre de l'expansion dans la dernière moitié du XIXe siècle. En 1844, la valeur estimative des prises n'était que de $125,000. Elle doubla dans la décade suivante et, dès 1860, elle dépassait $1,000,000. Dix ans plus tard elle atteignait $6,000,000, chiffre plus que doublé en 1878. En 1900 elle avait atteint un total de $21,000,000 et l'augmentation s'est continuée avec peu d'interruption jusqu'en 1918, alors qu'elle toucha la cime de $60,000,000. Depuis lors, il y a eu des diminutions, mais elles sont attribuables à l'abaissement des prix plutôt qu'à une réduction de la prise. En 1938 la valeur s'établit à $40,492,976. Il est entendu que ces chiffres représentent la valeur totale du poisson vendu soit frais, soit séché, soit en conserve ou autrement préparé. Le nombre d'employés a augmenté en même temps en proportion égale. Il s'est élevé à plus de 90,000 certaines années. Le capital engagé s'est établi d'ailleurs jusqu'à $64,000,000. En 1938 le nombre d'employés est de 85,994 et le capital immobilisé est de $48,561,442.

Entre tous les poissons, la morue de l'Atlantique et le saumon du Pacifique se disputèrent longtemps la primauté; mais depuis 1895 le saumon tient définitivement la première place et la quantité de homard et son prix élevé ont plus d'une fois, ces dernières années, relégué la morue au troisième rang. La valeur annuelle moyenne de la production de la pêche de saumon au cours de la période de 1929 à 1938 est de $12,515,482; celle de la pêche de homard, de $4,567,646; celle de la pêche de morue, de $3,319,603. Pour le saumon la cime est 1930 ($17,731,891); pour le homard et la morue, c'est 1929 ($5,696,542 et $5,394,636 respectivement). Les premiers temps la Nouvelle-Ecosse était à la tête des provinces; mais la Colombie Britannique occupe maintenant la première place, la Nouvelle-Ecosse vient au deuxième rang et le Nouveau-Brunswick est troisième.

COMMERCE

Vu la quantité immense de poisson pris annuellement par les pêcheurs canadiens, le commerce doit dépendre dans une large mesure du marché étranger comme débouché du produit. On peut évaluer approximativement à 60 ou 70 p.c. des prises annuelles la portion exportée, dont les Etats-Unis absorbent environ la moitié et le Royaume-Uni, le quart. L'année civile 1938 les exportations totales s'élèvent à $27,543,680; les Etats-Unis en reçoivent pour $12,713,819 et le Royaume-Uni, pour $6,880,661. Un autre groupement des statistiques des exportations indique que les pays de l'Empire Britannique en reçoivent pour $11,457,680 et les pays étrangers, pour $16,086,000. Le plus important des poissons exportés est le saumon en boîte (expédié au Royaume-Uni et aux marchés européens), suivi par le homard

frais, le homard en boîte, le saumon frais, le corégone frais et la morue séchée (aux Antilles et en Amérique du Sud, etc.). Pour le poisson frais, les Etats-Unis constituent le principal débouché. En 1938 les importations canadiennes de poisson se placent à $3,036,227.

REVUE DES PÊCHERIES, ANNÉE CIVILE 1938

En 1938 les prises commerciales de poissons, mollusques et crustacés des pêcheurs canadiens montrent une diminution en regard du total de 1937; mais la valeur marchande de la production de l'année ($40,492,976) accuse une augmentation de plus de $1,500,000 et est plus forte que la valeur marchande de toute autre année depuis 1930. La prise totale provenant des pêcheries maritimes et d'eau douce est de 10,741,150 quintaux, soit environ 176,900 quintaux de moins que l'année précédente. Il y a diminution des prises des pêcheries maritimes, qui s'élèvent à 9,845,723 quintaux comparativement à 10,026,396 quintaux l'année précédente. Les prises des pêcheries intérieures ou d'eau douce, 895,427 quintaux, augmentent de 3,000 à 4,000 quintaux. La valeur au débarquement de la prise des pêcheries maritimes ou, en d'autres termes, la valeur de la prise pour les pêcheurs au débarquement augmente de plus de $58,000, bien que la prise de poissons, mollusques et crustacés pendant l'année soit plus faible que celle de 1937. D'autre part, dans le cas des pêcheries intérieures la valeur au débarquement fait voir une diminution de $422,279, bien que la prise soit plus considérable. Au point de vue de la valeur marchande, ce sont les pêcheries maritimes qui montrent une augmentation, soit de $1,790,101. La valeur marchande de la prise des pêcheries intérieures, $6,718,828, diminue de $273,419. Cinq des provinces (Manitoba, Alberta, Ile du Prince-Edouard, Québec et Colombie Britannique) ont à leur crédit des augmentations de valeur marchande. Toutefois, le plus grand gain (plus de $2,517,000) est celui de la Colombie Britannique.

Grande pêche.—Pour l'ensemble du Dominion la pêche au saumon tient encore la tête au point de vue de la valeur marchande de la prise de l'année. La prise de saumon augmente de plus de 42,500 quintaux et sa valeur marchande ($14,992,500 en chiffres ronds) surpasse de plus de $2,622,000 celle de 1937. La pêche au homard, venant en deuxième lieu après le pêche au saumon au point de vue de la valeur marchande, accuse une augmentation de prise comparativement à 1937; mais la faiblesse des prix sur les marchés d'exportation a pour effet de réduire la valeur marchande de plus de $840,000. La valeur marchande de la prise de homard est de $3,793,219. Pour ce qui est de la pêche à la morue, il y a une augmentation tant de la prise que de la valeur marchande. Les prises des pêcheurs de morue, environ 1,702,000 quintaux, augmentent de près de 178,400 quintaux et leur valeur marchande, $3,335,231, montre un gain de $195,000. La pêche au hareng n'est pas aussi heureuse qu'elle l'a été l'année précédente, la prise de même que la valeur marchande diminuent. Le corégone est encore de première importance dans les pêcheries d'eau douce, bien que la prise et la valeur diminuent. Les débarquements de corégone atteignent 154,244 quintaux et leur valeur marchande est de $1,650,347, soit une diminution d'environ 19,400 quintaux d'une part et de $237,500 d'autre part. Les autres poissons, d'eau salée ou d'eau douce, dont la valeur marchande s'établit à plus de $1,000,000 sont les suivants: flétan, $1,789,444; sardine, $1,393,129; églefin, $1,361,992; truite, $1,036,292; doré, $1,031,868.

PÊCHERIES MARITIMES

Le tableau suivant donne, par province, les chiffres montrant la prise de poissons, mollusques et crustacés de mer les années civiles 1938 et 1937:

	1938	1937
	lb	lb
Colombie Britannique	456,286 400	495,419 500
Québec	86,507 800	71,596,600
Nouveau-Brunswick	127,173,100	137,790,700
Ile du Prince-Edouard	29,420,400	27,525,000
Nouvelle-Ecosse	285,184,600	270,307,800
Totaux	984,572,300	1,002,639,600

Pour la plupart des plus importantes pêcheries la production est plus grande en 1938 qu'en 1937, bien que la prise globale des pêcheries maritimes augmente. La morue débarquée sur le littoral de l'Atlantique, par exemple, s'établit à 168,338,800 livres, soit environ 17,400,000 livres de plus qu'en 1937. Les débarquements de hareng de l'Atlantique, 114,906,400 livres, sont d'environ 7,160,000 livres plus considérables que l'année précédente. La prise d'églefin, de homard, de maquereau et de sardine fait voir une augmentation en 1938; le hareng s'établit à $39,358,900 livres; le homard, à 31,438,500 livres; le maquereau, à 28,556,500 livres; la sardine, à 184,450 barils.

Sur la côte du Pacifique, la prise de saumon est de 173,466,400 livres contre 169,173,600 en 1937. La quantité de flétan débarquée en Colombie Britannique par les bateaux de pêche canadiens est de 12,024,700 livres, augmentation de 303,000 livres en chiffres ronds. La production de hareng de la Colombie Britannique, cependant, diminue tout à fait brusquement et se place à moins de 132,892,000 livres comparativement à 192,979,500 livres l'année précédente. Tandis que la prise de hareng diminue, les débarquements de pilchard montrent un gain, tout comme ceux de saumon et de flétan. En 1937 les pêcheurs de pilchard ont débarqué 96,148,500 livres, mais en 1938 leurs prises s'élèvent à 103,537,000 livres. Toutefois, les prises globales de toutes les pêcheries de la Colombie Britannique sont moins considérables en 1938 qu'elles ne l'étaient l'année précédente.

PÊCHERIES INTÉRIEURES

Deux des régions où se pratique la pêche d'eau douce, l'Alberta et le Manitoba, font voir des augmentations dans la valeur de la production poissonnière en 1938 comparativement à 1937; mais ailleurs il y a des diminutions et le résultat net est que la production de l'ensemble des pêcheries d'eau douce ne vaut que $6,718,828, soit $273,400 de moins (en chiffres ronds) qu'en 1937. La diminution majeure (près de $262,000) se produit en Ontario et dans cette province la réduction est attribuable en majeure partie au succès moins grand de la pêche à la sandre. La prise de sandre—cette espèce particulière de poisson ne se prend qu'en Ontario—diminue de quelque 21,300 quintaux en regard de l'an dernier, alors qu'elle s'élevait à 94,500 quintaux (en chiffres ronds). La valeur marchande de la prise de 1938, légèrement supérieure à $497,500, fait voir une diminution de $315,100.

En Alberta le gain est de $59,600 et au Manitoba, de $15,100. En Saskatchewan la valeur marchande de la pêche diminue de $58,500, tandis que pour les pêcheries d'eau douce du Québec la réduction est de $21,200. La production des pêcheries intérieures du Nouveau-Brunswick baisse de près de $3,000; au Yukon la diminution approche $3,500. Il s'agit des chiffres ronds dans tous les cas donnés ici.

NOTA.—La précédente "Revue des Pêcheries, 1938" est publiée grâce à la courtoisie du sous-ministre des Pêcheries, au ministère duquel elle a été préparée

STATISTIQUES DES PÊCHERIES DU CANADA, 1938

La valeur globale des produits poissonniers du Canada en 1938 est de $40,492,976, comparativement à $38,976,294 en 1937 et $39,165,055 en 1936. Ces chiffres représentent la valeur de tous les produits tels que mis sur le marché, qu'ils aient été vendus pour consommation à l'état frais ou qu'ils aient subi un traitement ou une transformation quelconques dans une usine ou au domicile des pêcheurs. Le tableau qui suit montre les prises et la valeur marchande des principaux poissons commerciaux (dont la pêche a donné une valeur de $100,000 ou plus) les cinq dernières années, avec une indication dans la dernière colonne de l'augmentation ou diminution en 1938 comparativement à 1937.

OUTILLAGE-CAPITAL ET EMPLOYÉS

Opérations primaires

Capital.—Les immobilisations représentées par les vaisseaux, barques et appareils employés dans les opérations primaires de la prise et du débarquement du poisson ont une valeur totale de $26,598,944 en 1938, dont $21,679,805 ou 82 p.c. pour les pêcheries maritimes et $4,919,139 ou 18 p.c. pour les pêcheries intérieures. Le total comprend 41,319 vaisseaux et barques valant $14,760,329, des filets, seines, pièges et autres appareils valant $11,838,615. Comparativement à l'année précédente, les immobilisations des pêcheries maritimes montrent une réduction de $203,132, tandis que la valeur de l'outillage employé dans les pêcheries intérieures augmente de $5,697, soit une diminution de $197,435 pour l'outillage global des deux pêcheries.

Employés.—Les hommes employés dans les pêcheries au cours de l'année se chiffrent à 71,510, dont 57,034 dans les pêcheries maritimes et 14,476 dans les pêcheries intérieures. Comparativement à l'année précédente, le nombre de pêcheurs augmente de 1,529.

Conserveries et saurisseries

Capital.—Les immobilisations des conserveries et saurisseries, branche de l'industrie des pêcheries, passent de $18,130,385 en 1937 à $21,962,498 en 1938. L'augmentation est principalement attribuable aux plus grandes immobilisations dans les saumoneries. L'état suivant des pourcentages montre la relation qui existe entre le capital de chaque classification et les immobilisations totales: saumoneries, 53 p.c.; saurisseries, 24 p.c.; sardineries et autres conserveries, 10 p.c.; homarderies, 6 p.c.; huileries, 4 p.c.; glacières, 2 p.c.; conserveries de coques, 1 p.c.

Employés.—Les personnes employées dans les établissements pendant l'année se chiffrent à 14,484, à rapprocher de 14,044 l'année dernière.

Les tableaux 3 et 6 qui suivent montrent en résumé l'outillage-capital et les employés aux opérations primaires et dans les conserveries et saurisseries pour l'ensemble du Canada; d'autres tableaux de l'introduction présentent les statistiques par province, tandis que la Partie II du rapport donne les statistiques par comté et sous-district de pêche.

3. Outillage-capital—Opérations primaires. Valeur des vaisseaux, barques, filets, pièges, môles et quais, etc., employés dans les pêcheries canadiennes en 1936, 1937 et 1938

Détails sur les conserveries et les saurisseries

Nombre d'établissements.—Les rapports des établissements s'occupant des opérations de conserverie et saurisserie sont classifiés d'après l'item principal de production, et les statistiques sont données séparément dans le rapport pour chaque groupe, excepté lorsqu'il y a moins de trois établissements dans un groupe. Les établissements en opération en 1938 se chiffrent à 561 et se répartissent comme suit: 215 homarderies, 102 saumoneries, 25 conserveries de mollusques et crustacés, 11 sardineries et conserveries d'autres poissons, 172 saurisseries, 18 glacières et 18 huileries. Les saumoneries augmentent de 75 en 1937 à 102 en 1938; mais cette augmentation a trait presque entièrement aux petites saumoneries dans la province de Québec, où le nombre passe de 33 à 62. Sur le littoral du Pacifique toutes les saumoneries ont une grande capacité, elles se chiffrent à 38 comparativement à 37 en 1937. Il y a 62 homarderies de moins qu'en 1937. Le total de toutes catégories accuse une diminution de 36. La préparation du poisson est une industrie qui se confine aux provinces bordant la mer et les établissements sont situés sur les rives des baies et estuaires où les pêcheurs ont un accès facile pour faire la livraison de leurs prises.

Employés, salaires et gages.—En 1938 les établissements emploient 14,484 personnes, augmentation de 440 sur l'année précédente. Le total comprend 642 employés salariés, 9,092 employés à gages et 4,750 apiéceurs. Les apiéceurs se rencontrent principalement dans les saumoneries de la Colombie Britannique où une grande partie du travail se fait à l'entreprise; l'entrepreneur embauche et paie ses propres employés et est lui-même rémunéré selon la quantité de poisson mis en conserve. Environ 80 p.c. des travailleurs dans les saumoneries de la Colombie Britannique sont classifiés comme apiéceurs. Voici la méthode employée pour en arriver au nombre total d'employés: sur le rapport de chaque établissement est faite l'addition du nombre de travailleurs à gages indiqués pour chaque mois, et le total ainsi obtenu est divisé par le nombre de mois pendant lesquels l'établissement a été en exploitation durant l'année. Par exemple, une homarderie emploie 12 personnes en mai, 14 en juin, 12 en juillet et 10 en août, en tout 48. On divise ce total par le nombre de mois d'exploitation, c'est-à-dire 4, ce qui donne 12 comme nombre d'ouvriers à gages de l'établissement. A ce nombre on ajoute celui des salariés et celui des apiéceurs, dont l'emploiement est une base annuelle ou saisonnière et non mensuelle. Le chiffre définitivement obtenu sera le nombre d'employés attribué à l'établissement en question pour l'année, et le calcul de ces totaux fournit le nombre d'employés dans toute l'industrie. L'emploiement dans les établissements est le plus

considérable pendant les mois d'été, il atteint sa cime en juin. Dans plusieurs établissements, spécialement les homarderies, le travail est intermittent; il dépend largement du volume de poisson entré pour préparation. Quand il en arrive une quantité considérable, il faut des employés supplémentaires et un nombre additionnel de personnes, dont plusieurs femmes, sont employées pendant deux ou trois jours de la semaine. Dans les statistiques mensuelles de l'emploiement il n'est pas fait de distinction entre les employés à temps entier et les employés à temps partiel.

Le bordereau de paye de l'année s'établit à $4,227,955 et se répartit comme suit parmi les classes d'employés: $772,493 pour les salariés, $2,775,425 pour les employés à gages et $680,037 pour les apiéceurs. Comparativement à l'année précédente, il y a une diminution de $185,390.

Le tableau suivant donne le nombre d'employés que comprend chacune des catégories et les salaires et gages payés à ces derniers en 1938 et chacune des deux années précédentes.

7. Employés des conserveries et saurisseries en 1936, 1937 et 1938—nombre, salaires et gages

Année	Salariés		Employés à gages		Apiéceurs		Nombre total d'employés, salaires et gages	
	nomb.	$	nomb.	$	nomb.	$	nomb.	$
1936	558	734,678	10,073	2,544,903	4,607	724,269	15,238	4,003,850
1937	602	722,651	9,671	2,632,120	3,771	687,794	14,044	4,042,565
1938	642	772,493	9,092	2,775,425	4,750	680,037	14,484	4,227,955

Employés à gages par mois.—Dans l'ensemble de l'industrie l'emploiement est à son apogée pendant les mois de mai et de juin, étant influencé par les opérations des homarderies qui se confinent principalement à ces deux mois. Dans les saumoneries le travail se poursuit de mai à octobre, tandis que dans plusieurs saurisseries et conserveries de coques et sardineries l'emploiement dure toute l'année. Le tableau suivant présente les statistiques de l'emploiement des employés à gages par mois de 1936 à 1938.

8. Travailleurs à gages dans les conserveries et les saurisseries inscrits sur le bordereau de paye chaque mois, 1936, 1937 et 1938 (a)

(a) A l'exclusion des apiéceurs.

Matières premières.—La quantité de poisson absorbée par les établissements en 1938 est de 7,826,520 quintaux, soit 79 p.c. de la prise totale des pêcheries maritimes du Dominion, comparativement à 7,431,030 quintaux et une proportion de 75 p.c. l'année précédente. Le reste de la prise est mis sur le marché directement par les pêcheurs, soit à l'état frais, soit en conserves domestiques.

Le tableau suivant donne la quantité et la valeur du poisson et de toutes autres matières employées les années 1936 à 1938.

9. Quantité et valeur des matières premières utilisées dans les conserveries et les saurisseries, 1936, 1937 et 1938

Matière premières	1936		1937		1938	
	Quantité	Valeur	Quantité	Valeur	Quantité	Valeur
		$		$		$
Poisson qtx	7,786,297	11,916,080	7,431,030	12,179,219	7,826,520	12,589,724

Sel qtx	535,326	256,651	406,340	208,510	381,461	206,797
Récipients	–	3,672,437	–	3,353,174	–	3,728,603
Autres matières premières	–	477,626	–	443,880	–	452,893
Total	–	**16,459,938**	–	**16,318,781**	–	**17,082,060**

Production.—La production des établissements en 1938 a une valeur totale de $27,949,208, dont $21,896,811 pour les produits mis en boîte, en conserve ou autrement préparés et $6,052,397 pour le poisson mis sur le marché pour consommation à l'état frais. La valeur totale montre une augmentation de $1,860,583 ou de 7 p.c. sur l'année précédente. Les diverses classifications contribuent comme suit à la valeur totale en 1938: saumoneries, 50 p.c.; saurisseries, 27 p.c.; homarderies, 8 p.c.; sardineries et conserveries d'autres poissons, 8 p.c.; huileries, 4 p.c.; glacières, 2 p.c.; conserveries de coques, 1 p.c. La Colombie Britannique, avec ses importantes saumoneries, occupe la première place parmi les provinces pour ce qui est de la valeur totale de la production; la Nouvelle-Ecosse, dont la production dépend principalement des glacières et homarderies, se classe deuxième. L'état suivant des pourcentages donne la position de chaque province en relation du total pour le Dominion: Colombie Britannique, 64 p.c.; Nouvelle-Ecosse, 23 p.c.; Nouveau-Brunswick, 9 p.c.; Québec et Ile du Prince-Edouard, 2 p.c. chacun. La valeur de production des établissements en 1938 représente 83 p.c. de la valeur totale des produits des pêcheries maritimes mis sur le marché pendant l'année. Le reste—17 p.c.—est mis directement sur le marché par les pêcheurs, soit en conserves domestiques, soit pour consommation à l'état frais.

Le tableau suivant donne pour chaque classification d'établissement la valeur de la production du poisson vendu pour consommation à l'état frais et du poisson apprêté, de 1936 à 1938.

10. Valeur de la production des conserveries et des saurisseries, 1936, 1937 et 1938

Primes

En vertu d'une "Loi pour encourager le développement des pêcheries maritimes et la construction des navires de pêche", une somme de $160,000 est donnée en primes chaque année par le Gouverneur en conseil. Sous le nom de primes de pêche elles sont distribuées par le Ministère des Pêcheries parmi les pêcheurs et les propriétaires de navires et barques de pêche du littoral de l'Atlantique selon les règlements édictés de temps à autre par le Gouverneur en conseil.

En 1938 les versements sont effectués sur la base suivante:—

Aux propriétaires de navires de pêche ayant droit à cette prime, $1 par tonne enregistrée; avec un maximum de $80 par navire.

A chaque membre de l'équipage ayant droit à la prime, $6.00.

Aux propriétaires de barques mesurant au moins 12 pieds de quille, $1 par embarcation.

A chaque pêcheur d'une barque ayant droit à une prime, $5.55.

Le montant payé en 1938 est de $159,982.70, réparti comme suit:

A 734 propriétaires de navires et leurs équipages.....$ 35,642.30
A 11,660 barques et leurs équipages.....$124,340.40

Commerce extérieur

Exportations.—La valeur totale du poisson et produits poissonniers canadiens exportés pendant l'année civile 1938 est de $27,543,680, à rapprocher de $28,902,152 en 1937 et $25,398,102 en 1936. Par ordre de valeur, les principaux item sont les suivants en 1938: saumon, $7,128,194; homard frais, $1,952,697; homard en boîte, $1,898,838; corégone frais et congelé, $1,514,870; morue séchée, $1,175,645. Pendant l'année la valeur totale des exportations de poisson frais et congelé est de $11,344,363; celle du poisson préparé (en boîte, salé, fumé, etc.), $13,965,030; celle des huiles de poisson, $975,491; celle des produits poissonniers divers, $1,258,796. Les principaux pays de destination sont les suivants: Etats-Unis, $12,713,819; Royaume-Uni, $6,880,661; Australie, $1,932,655; Antilles britanniques (comprenant Barbades, Jamaïque, Trinidad et Tobago, et autres), $946,528; France, $691,833; Allemagne, $687,844; Sud-Africain britannique, $621,345; Nouvelle-Zélande, $522,680. En tout 87 pays reçoivent du poisson et des produits poissonniers canadiens en 1938 et la liste des exportations renferme 58 item distincts.

Importations.—La valeur du poisson et des produits poissonniers importés pour consommation s'établit à $3,036,227, en regard de $2,877,131 l'année précédente et $2,918,251 en 1936. Les principales importations sont les suivantes: saumon frais des Etats-Unis, de Terre-Neuve et de l'Alaska; huîtres des Etats-Unis; sardines de la Norvège, de la France, de l'Italie et du Portugal; huile de foie de morue du Royaume-Uni, des Etats-Unis, de Terre-Neuve et de la Norvège.

Le tableau suivant donne la valeur des exportations et des importations de 1926 à 1938.

Valeur des exportations et des importations de poisson et de produits poissonniers, années terminées le 31 décembre, 1926 à 1938

Année	Exportations	Importations	Année	Exportations	Importations
	$	$		$	$
1926	37,089,545	2,045,838	1933	20,223,610	1,694,325
1927	34,814,448	3,768,901	1934	22,497,135	2,121,762

1931	25,848,585	2,653,894	1938	27,543,680	3,036,227
1932	18,752,107	1,862,337			

Revue rétrospective

Les cinq tableaux suivants présentent une revue rétrospective de l'industrie de la pêche au Canada pendant les années passées. En ce qui concerne la production, les données sont établies par province et par année et remontent jusqu'à 1870. Quant au nombre et à la valeur des navires, barques, etc., les chiffres partent de l'année 1880; le personnel qu'emploie cette industrie est révélé depuis 1895.

18. Revue rétrospective—(a) Valeur totale des pêcheries dans les différentes provinces du Canada pour les années 1870 et 1875 jusqu'à 1938 inclusivement

20. Tableau de conversion de la pesée du poisson

Dans ce tableau, dans le cas de la morue, de l'églefin, de la merluche et du brosmius, du merlan et du flétan (littoral de l'Atlantique) on entend par poisson frais le poisson dont on a enlevé les entrailles et non la tête. Le poids du flétan sur la côte du Pacifique est pris après l'enlèvement de la tête et des entrailles. Dans le cas de l'espadon et du thon le poids comprend le poisson après l'enlèvement de la tête, de la queue et des entrailles. Pour tous les autres poissons le terme "poisson frais" signifie le poisson tel qu'il est sorti de l'eau.

MORUE, ÉGLEFIN, MERLUCHE ET BROSMIUS OU MERLAN

300 lb de poisson frais donnent 1 qtl de filets frais.
160 lb de poisson frais donnent une caisse de poisson en boîte.
200 lb de poisson frais donnent 1 qtl de poisson salé vert.
300 lb de poisson frais donnent 1 qtl de filets fumés.
200 lb de poisson frais donnent 1 qtl de poisson fumé.
300 lb de poisson frais donnent 1 qtl de poisson séché.
400 lb de poisson frais donnent 1 qtl de poisson désossé.

HARENG

70 lb de poisson frais donnent une caisse de hareng en boîte.
200 lb de poisson frais donnent 1 qtl de hareng fumé.
300 lb de poisson frais donnent un baril de hareng saumuré.
200 lb de poisson frais donnent un baril de boette (fraîche ou salée).
200 lb de poisson frais donnent un baril d'engrais.
125 lb de poisson frais donnent 1 qtl de hareng salé à sec.

MAQUEREAU OU ALOSE

70 lb de poisson frais donnent une caisse de poisson en boîte.
300 lb de poisson frais donnent un baril de poisson saumuré.
400 lb de poisson frais donnent un baril de filets de maquereau salés.

SARDINE

Un baril de poisson frais donne de 4 à 5 caisses de poisson en boîte.
Une caisse de 25 livres équivaut à 100 boîtes de $\frac{1}{4}$ de lb chacune.

PILCHARD

70 lb de poisson frais donnent une caisse de poisson en boîte.
200 lb de poisson frais donnent un baril de boette.

GASPAROT

200 lb de poisson frais donnent 1 qtl de poisson fumé.
275 lb de poisson frais donnent un baril de poisson saumuré.

SAUMON

84 lb de poisson frais (Pacifique) donnent une caisse de 48 lb de poisson en boîte.
70 lb de poisson frais (Atlantique) donnent une caisse de 48 lb de poisson en boîte.
170 lb de poisson frais donnent 1 qtl de poisson fumé.
125 lb de poisson frais donnent 1 qtl de poisson salé à sec.
150 lb de poisson frais donnent 1 qtl de poisson fumé doux.
150 lb de poisson frais donnent 1 qtl de poisson saumuré.

THON

100 lb de poisson frais donnent une caisse de poisson en boîte.

COQUES

Littoral de l'Atlantique—
200 lb de coques fraîches donnent une caisse de coques en boîte. (48 boîtes de 5 onces de chair chacune.)

Littoral du Pacifique—
Couteaux.—80 lb de chair fraîche donnent une caisse de chair en boîte. (48 boîtes de 6 onces de chair chacune.)
Praires du Pacifique, amandes de mer, etc.—150 lb de chair fraîche donnent une caisse de chair en boîte. (48 boîtes de 6 onces de chair chacune.)

CRABES

800 lb de crabe frais donnent une caisse de crabe en boîte.

HOMARD

200 lb de homard frais donnent une caisse de homard en boîte.
(48 boîtes de 12 onces de chair chacune.)
500 lb de homard frais donnent 1 qtl de chair.

PREFACE

This Report is issued under an arrangement for statistical co-operation between the Dominion Bureau of Statistics and the Government departments having jurisdiction with regard to fisheries throughout Canada. These departments comprise: the Dominion Fisheries Department which exercises jurisdiction over the fisheries of the Maritime provinces, Yukon Territory, British Columbia and the Magdalen Islands, and the Fisheries Branches of departments of Ontario, Quebec, Manitoba, Saskatchewan and Alberta which have jurisdiction over the fisheries of their respective provinces, excepting in the case of Quebec, the fisheries of the Magdalen Islands. The province of British Columbia has a Fisheries Branch, but it does not engage in independent statistical work.

Under the arrangement above referred to, the statistics of the catch, and of the products marketed in a fresh state or domestically prepared, are collected by the local fisheries officers, checked in the Department of Fisheries, and co-ordinated and compiled in the Dominion Bureau of Statistics. In the case of manufactured fish products, schedules in conformity with those of other sections of the Census of Industry are sent by the Bureau to the operators of canneries, fish-curing establishments, etc., the fisheries officers assisting in securing an expeditious and accurate return. The grateful acknowledgments of the Bureau are tendered to the officers of the provincial governments who co-operate in these arrangements.

For reasons of economy the present volume omits certain reading matter and tables which were contained in the Introduction of former reports, among which may be mentioned: the short history of the fisheries of Canada and the annual write-up of fishing conditions during the year.

R. H. COATS,
Dominion Statistician.

FISHERIES STATISTICS OF CANADA, 1939

The total value of production of the fisheries of Canada for the year 1939 was $40,075,922, compared with $40,492,976 in 1938 and $38,976,294 in 1937. These totals represent the value of the product as marketed, whether sold for consumption fresh, domestically prepared or factory made. Table 1, which follows, shows the quantity caught and the value marketed of the chief commercial fishes (those valued at $100,000 or upwards) for the past five years, with a statement in the final column of the increase or decrease for 1939 compared with 1938, while table 2 gives the quantity and value of all fish as caught and marketed, for the years 1938 and 1939.

1. Quantity (a) **and Value** (b) **of the Chief Commercial Fishes, Canada, 1935 to 1939**

Capital Equipment and Employees

In Primary Operations

Capital.—The amount of capital invested in the vessels, boats, nets, traps, piers and wharves, etc. used in the primary operations of catching and landing the fish in 1939, was $25,844,436, of which $20,926,725 is credited to the sea fisheries and $4,917,711 to the inland fisheries. Compared with the preceding year the total amount shows a decrease of $754,508.

Employees.—The number of men engaged in fishing during the year was 68,941, this total comprising 55,205 men employed in the sea fisheries and 13,736 in the inland fisheries. In the preceding year the total number of fishermen was 71,510.

In Fish Canning and Curing

Capital.—The fish processing industry—canning, curing, etc.—had a total capital investment in 1939 of $21,479,200. The number of establishments in operation was 523, comprising 194 lobster canneries, 166 fish curing establishments, 84 salmon canneries, and 79 plants under various other classifications.

Employees.—The number of persons engaged in work in the establishments in the year 1939 was 14,814, compared with 14,484 in the year before.

Tables 3 to 6, which follow, contain summaries of capital equipment and employees in the primary operations and in fish canning and curing establishments, for Canada as a whole: other summary tables present information by provinces, while statistics by counties and fishing districts will be found in Part II of the Report.

Review of the Fisheries by Provinces

The following tables (7-13) show by provinces: the total value of the fisheries; the quantity caught and landed and the value marketed of the chief commercial fishes; the quantity and value of all fish caught and landed and marketed; the total values for counties or districts of sea fish caught and landed and marketed; the quantity of sea fish taken offshore; the capital equipment; and the number of employees.

7. Value of the Fisheries by Provinces, 1935-1939, in Order of Value, 1939

FISHING BOUNTY

Under the authority of "An Act to Encourage the Development of the Sea Fisheries and the Building of Fishing Vessels" the sum of $160,000 is appropriated annually by the Governor in Council. It is distributed under the name of Fishing Bounty by the Department of Fisheries amongst fishermen and fishing vessel and boat owners on the Atlantic coast, under regulations made from time to time by the Governor in Council.

For the year 1939, payment was made on the following basis:—

To owners of vessels entitled to receive bounty—$1 per registered ton; payment to the owner of any one vessel not to exceed $80.

To vessel fishermen entitled to receive bounty—$6.20 each.

To owners of boats measuring not less than 12 feet keel—$1 per boat.

To boat fishermen entitled to receive bounty—$5.85.

The total amount paid in 1939 was $159,993.85, allocated as follows:—

To 646 vessels and their crews	$ 32,356.55
To 11,466 boats and their crews	$ 127,637.30

FOREIGN TRADE

Exports.—Canada's export trade in fish and fishery products had a total value in 1939 of $29,641,232, an increase over the preceding year of $2,097,552, or 7 per cent. The chief items of export, in order of value, were canned salmon ($8,627,557); fresh lobster ($2,011,163); fresh and frozen salmon ($1,664,176); fresh and frozen whitefish ($1,444,331); canned lobster ($1,431,294); dried cod ($1,241,712); and fresh and frozen halibut ($1,203,135). The United Kingdom and the United States, together, took 75 per cent of the exports, the former country's purchases amounting to $8,718,246, or 29 per cent of the total exports, and the latter's to $13,661,128, or 46 per cent of the total. Compared with the preceding year the value of the exports to the United Kingdom shows an increase of $1,837,585, or 27 per cent, and of the exports to the United States, an increase of $947,309, or 7 per cent.

Imports.—The value of fish and fishery products imported into Canada, for consumption, in the year 1939 was $3,438,644, compared with $3,036,227 in 1938. The principal kinds imported are sardines, canned, chiefly from Norway; tuna fish, prepared or preserved, from the British East Indies and Japan; and salmon, fresh, from Newfoundland and Alaska.

The following table gives values of exports and imports in the years 1926 to 1939.

14. Values of Exports and Imports of Fish and Fishery Products in the years ending December 31, 1926 to 1939

Year	Exports	Imports	Year	Exports	Imports
	$	$		$	$
1926	37,089,545	3,045,838	1933	20,223,610	1,694,325
1927	34,814,448	3,768,901	1934	22,497,135	2,121,762
1928	38,096,245	4,068,074	1935	24,859,486	2,597,856
1929	37,546,393	4,233,906	1936	25,398,102	2,918,251
1930	31,869,350	3,446,601	1937	28,902,152	2,877,131
1931	25,848,585	2,653,894	1938	27,543,680	3,036,227
1932	18,752,107	1,862,337	1939	29,641,232	3,438,644

HISTORICAL REVIEW

The five tables following will afford a review of the fishing industry of Canada for the past several years. In the case of production, returns are given, by provinces, back to 1870. In the case of the number and value of vessels, boats, etc., the review extends to 1880, and in the case of the number of employees to 1895.

19. Table for Conversion of Weights of Fish

Fresh fish in this table in the case of cod, haddock, hake and cusk, pollock and halibut (Atlantic) means fish with the head on and the entrails removed. The weight of halibut on the Pacific Coast is to be the weight minus head and entrails. In the case of swordfish and tuna, it means fish with the head, tail and entrails removed. In all other cases, fresh fish means fish as it comes from the water.

COD, HADDOCK, HAKE AND CUSK OR POLLOCK

300 lb. of fresh produce one cwt. of fresh fillets.
160 lb. of fresh produce one case of canned.
200 lb. of fresh produce one cwt. of green salted.
300 lb. of fresh produce one cwt. of smoked fillets.
200 lb. of fresh produce one cwt. of smoked.
300 lb. of fresh produce one cwt. (100 lb.) of dried.
400 lb. of fresh produce one cwt. of boneless.

HERRING

70 lb. of fresh produce one case of canned.
200 lb. of fresh produce one cwt. of smoked.
300 lb. of fresh produce one barrel of pickled.
200 lb. of fresh produce one barrel of bait (fresh or salted).
200 lb. of fresh produce one barrel of fertilizer.
125 lb. of fresh produce one cwt. of dry salted.

MACKEREL OR SHAD

70 lb. of fresh produce one case of canned.
300 lb. of fresh produce one barrel of pickled.
400 lb. of fresh produce one barrel of salt mackerel fillets.

SARDINES

One barrel of fresh produces 4 to 5 cases canned.
(One case of 25 lb. equals 100 tins $\frac{1}{4}$ lb. each.)

PILCHARDS

70 lb. of fresh produce one case of canned.
200 lb. of fresh produce one barrel of bait.

ALEWIVES

200 lb. of fresh produce one cwt. of smoked.
275 lb. of fresh produce one barrel of pickled.

SALMON

80 lb. of fresh (Pacific) produce one 48-lb. case canned.
70 lb. of fresh (Atlantic) produce one 48-lb. case canned.
170 lb. of fresh produce one cwt. of smoked.
125 lb. of fresh produce one cwt. of dry salted.
150 lb. of fresh produce one cwt. of mild cured.
150 lb. of fresh produce one cwt. of pickled.

TUNA

100 lb. of fresh produce one case canned.

CLAMS

Atlantic Coast—200 lb. of fresh produce one case of canned. (48 tins of 5 oz. of clam meat each).

Pacific Coast—

Razor clams—80-lb. of fresh produce one case of canned. (48 tins of 6 oz. of clam meat each).

Little neck, butter clams, etc.—150 lb. of fresh produce one case of canned. (48 tins of 6 oz. of clam meat each).

CRABS

Pacific Coast—100 lb. of fresh (approximately 6 dozen) produce one case of canned (48 tins of $6\frac{1}{2}$ oz. each of drained crab meat).

LOBSTERS

200 lb. of fresh produce one case of canned. (48 tins of 12 oz. of lobster meat each).
500 lb. of fresh produce one cwt. of lobster meat.

III. Miscellaneous—(4) Statement showing the Salmon Pack (b) of the Province of British Columbia, by Districts and Species, 1939

Species	Fraser River	Naas River	Skeena River	Rivers Inlet and Smiths Inlet	Central Area and Queen Charlotte Islands	District No. 3 (Vancouver Island, etc.)	Total
	cases	cases	cases	cases	cases	cases	cases
Sockeye	73,216	18,834	96,358	36,937	21,213	23,329	269,888
Red Spring	5,092	17	3,277	285	301	1,329	10,302
Pink Spring	475	297	1,488	32	357	199	2,848
White Spring	1,511	137	348	306	69	576	2,947
Blueback	32,833	–	–	–	–	15,376	48,209
Steelhead	86	15	55	82	428	131	797
Cohoe	48,120	1,667	48,973	6,302	46,519	42,943	196,887
Pink	204,681	19,479	127,521	19,256	115,422	132,113	620,595
Chum	143,020	1,784	15,666	4,903	76,371	104,033	386,584
Total	**509,034**	**42,230**	**293,686**	**68,103**	**260,680**	**320,029**	**1,539,057**

(a) A number of "Late" claims amounting in all to $2,130.70, which are included in this statement, are for the season of 1938. As the basis of distribution for 1938 differed from that of 1939, a number of the figures in the "Amount" columns do not, as a result, balance with the number of claims paid.

(b) Standard cases of 48 pounds.

III. Miscellaneous—(5) Statement showing the Salmon Pack (a) of the Province of British Columbia, by Species, 1930 to 1939

(Furnished by the Canadian Manufacturers' Association)

(a) During the year 1939, three steam trawlers were in operation part of the year before being taken over by the for war purposes, and these were replaced by two which operated until the end of the year.

The following statement, prepared from Canadian fisheries statistics for the year shows the catches by Canadian fishermen in 1939 in certain areas, defined by the North American Council on Fishery Investigations, an international body representative of Canada, United States, Newfoundland and France for the co-ordination of fishery investigations in the Atlantic waters of the Continent. The boundaries of the areas are indicated in the accompanying chart.

III. Miscellaneous—(8) Fisheries Production in 1939 in Certain Areas Defined by the North American Council on Fishery Investigations

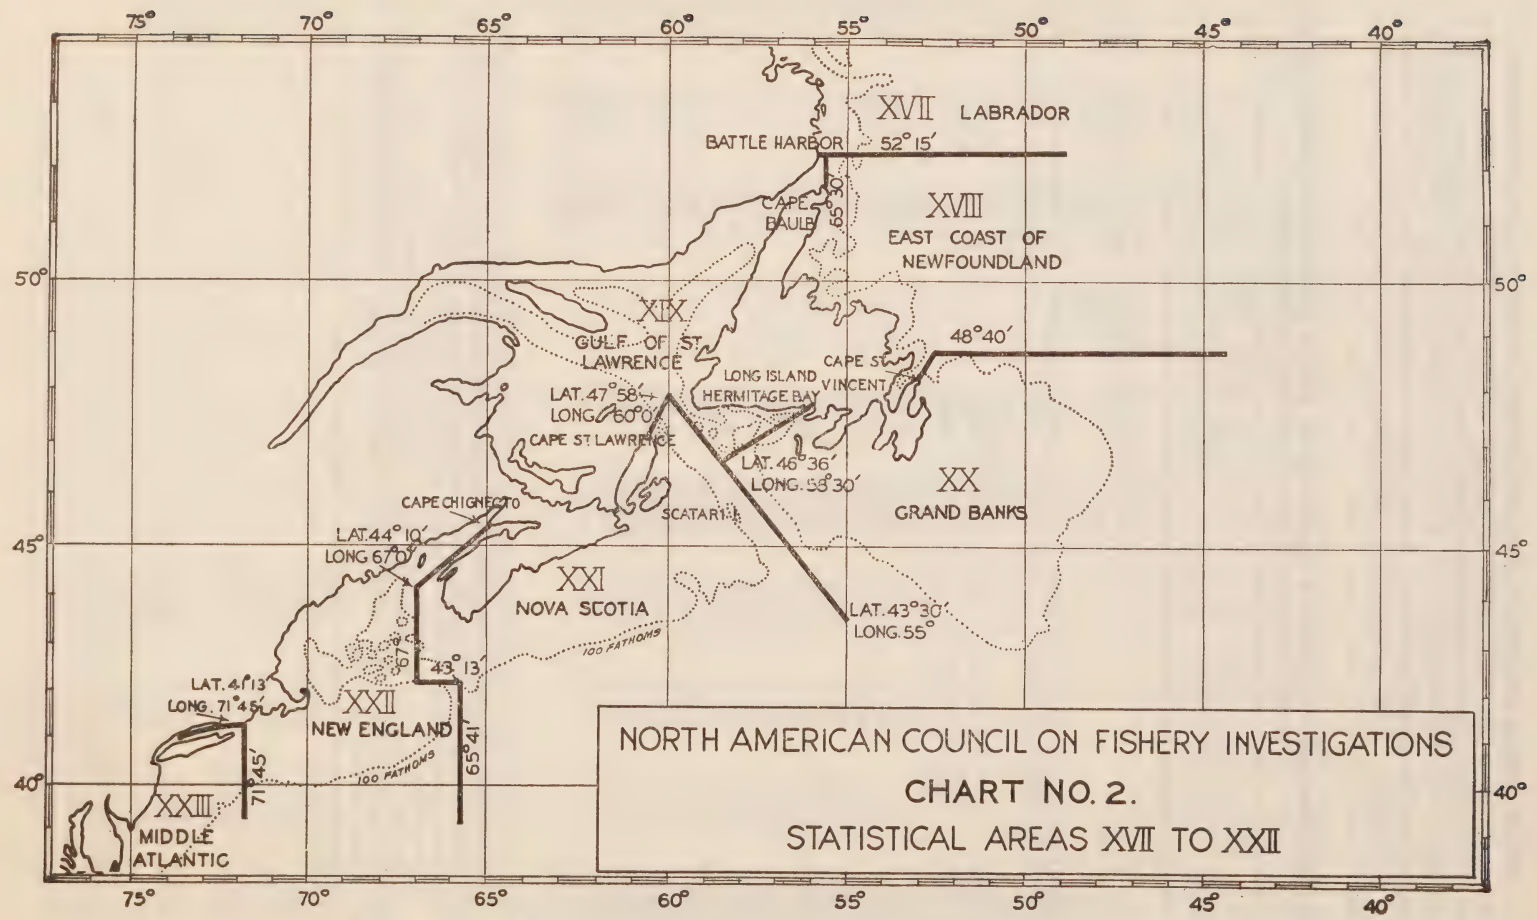

Kind of Fish	Area No. 19 (a)	Area No. 20 (b)	Area No. 21 (c)	Area No. 22 (d)	Total

PRÉFACE

Ce rapport est publié en vertu d'une entente établissant la coopération en matière de statistique entre le Bureau Fédéral de la Statistique et les différents services gouvernementaux ayant juridiction sur les pêcheries canadiennes. Ces services comprennent le Ministère fédéral des Pêcheries, qui exerce sa juridiction sur les pêcheries des Provinces Maritimes, du Yukon, de la Colombie Britannique et des Iles-de-la-Madeleine, et les divisions des Pêcheries des provinces d'Ontario, Québec, Manitoba, Saskatchewan et Alberta, qui régissent les pêcheries de leurs provinces respectives, sauf les pêcheries des Iles-de-la-Madeleine, en Québec, lesquelles sont sous la juridiction du Ministère des Pêcheries du Dominion. La Colombie Britannique possède une division des Pêcheries, mais cet organisme ne s'occupe pas de statistique pour son propre compte.

En vertu de l'arrangement dont il est parlé plus haut, les statistiques du poisson pêché et des produits offerts en vente à l'état frais ou après une préparation sommaire, sont recueillies par les fonctionnaires locaux du Ministère des Pêcheries, vérifiées et condensées au Ministère des Pêcheries, puis compilées au Bureau Fédéral de la Statistique. En ce qui concerne le poisson industriellement préparé et ses sous-produits, des formules similaires à celles en usage dans le recensement des autres branches de la production sont envoyées directement par le Bureau aux usines poissonnières, les fonctionnaires des services des Pêcheries s'assurant que ces formules sont consciencieusement remplies et promptement retournées. Les fonctionnaires des gouvernements provinciaux voudront bien accepter nos remerciements pour le concours qu'ils nous ont prêté.

Pour raisons d'économie le présent volume omet du texte et des tableaux, contenus dans l'Introduction des rapports antérieurs, dont on peut mentionner: l'historique des pêcheries au Canada et le résumé annuel des conditions de la pêche durant l'année.

R. H. COATS,
Statisticien du Dominion.

Bureau Fédéral de la Statistique,
Ottawa, 31 octobre 1940.

III. 1) Classification des vaisseaux et navires utilisés pour la pêche en haute mer, d'après les principales espèces de poissons pêchés, 1939 ... 186
2) a) Quantités et valeurs du poisson et de produits poissonniers importés au Canada pour y être consommés, en 1937, 1938 et 1939 ... 202
b) Quantités et valeurs du poisson et des produits poissonniers de provenance canadienne exportés du Canada en 1937, 1938 et 1939 ... 203
c) Quantités et valeurs du poisson et des produits poissonniers de provenance canadienne exportés du Canada, par pays de destination, en 1939 ... 204
d) Valeur totale des exportations de poisson et de produits poissonniers de provenance canadienne, par pays de destination, 1938 et 1939 ... 212
3) Primes aux vaisseaux de pêche, 1939 ... 213
4) Mise en conserve du saumon en Colombie Britannique, par district et par espèce, 1939 ... 213
5) Mise en conserve du saumon en Colombie Britannique, par espèce, 1930 à 1939 ... 214
6) Mise en conserve du homard au Canada, 1918 à 1939 ... 214
7) Débarquements des chalutiers à vapeur sur la côte de l'Atlantique, 1936 à 1939 ... 214
8) Production poissonnière dans certaines zones définies par le conseil d'enquête sur les pêcheries de l'Amérique du Nord, 1939 ... 215

STATISTIQUES DES PÊCHERIES DU CANADA, 1939

La valeur totale de la production des pêcheries du Canada en 1939 est de $40,075,922 contre $40,492,976 en 1938 et $38,976,294 en 1937. Ces chiffres représentent la valeur des produits tels que vendus, livrés à la consommation immédiate, préparés par les pêcheurs ou transformés dans un établissement. Le tableau 1, qui suit, montre les prises et la valeur marchande des principaux poissons commerciaux (valant $100,000 et plus) ces cinq dernières années; la dernière colonne l'augmentation ou la diminution sur 1938 en 1939. Le tableau 2 donne la quantité et la valeur du poisson pêché et mis en vente, en 1938 et 1939.

OUTILLAGE-CAPITAL ET EMPLOYÉS

Dans les opérations primaires

Capital.—Les immobilisations en fait de vaisseaux, barques, filets, pièges et quais et môles, etc., employés dans les opérations primaires de la prise et du débarquement du poisson en 1939, sont de $25,844,436 dont $20,926,725 pour les pêcheries maritimes et $4,917,711 pour les pêcheries intérieures. En regard de l'an dernier le total diminue de $754,508.

Employés.—Le nombre d'hommes engagés dans les pêcheries en 1939 est de 68,841, soit 55,205 dans les pêcheries maritimes et 13,736 dans les pêcheries intérieures. L'année précédente le total est de 71,510.

Dans les conserveries et saurisseries

Capital.—Les immobilisations globales de l'industrie de la transformation du poisson—conserverie, saurisserie, etc.—sont de $21,479,200 en 1939. Le nombre d'établissements en opération est de 523, comprenant 194 homarderies, 166 saurisseries, 84 saumoneries et 79 établissements de diverses autres classifications.

Employés.—Le nombre de personnes employées dans ces établissements en 1939 est de 14,814 contre 14,484 en 1938.

Les tableaux 3 et 6 qui suivent montrent en résumé l'outillage-capital et les employés aux opérations primaires et dans les conserveries et saurisseries pour l'ensemble du Canada; d'autres tableaux présentent les statistiques par province, tandis que la Partie II du rapport donne les statistiques par comté et sous-district de pêche.

3. Outillage-capital—Opérations primaires. Valeur des vaisseaux, barques, filets, pièges, môles et quais, etc., employés dans les pêcheries canadiennes en 1937, 1938 et 1939

(a) Comprend la valeur des terrains, bâtiments, outillage, produits, matériaux et provisions en main, argent en caisse et billets à recevoir.

(b) Bien que la majeure partie de la poudre et de l'huile de poisson soit produite dans les établissements classifiés comme "huileries", il y en a de petites quantités enregistrées parmi les produits des saurisseries.

Revue des pêcheries par province

Les tableaux ci-dessous (7-13) montrent, par province: la valeur totale des pêcheries; la quantité prise et débarquée et la valeur marchande des principaux poissons commerciaux; la quantité et la valeur de tout le poisson pris, débarqué et mis sur le marché; les valeurs totales, par comté ou district, du poisson de mer pris, débarqué et mis sur le marché; la quantité de poisson de mer produite par les pêcheries côtières; l'outillage-capital; le personnel.

7. Valeur des pêcheries, par province, de 1935 à 1939, par ordre d'importance en 1939

Primes

En vertu d'une "Loi pour encourager le développement des pêcheries maritimes et la construction des navires de pêche", une somme de $160,000 est donnée en primes chaque année par le Gouverneur en conseil. Sous le nom de primes de pêche elles sont distribuées par le Ministère des Pêcheries parmi les pêcheurs et les propriétaires de navires et barques de pêche du littoral de l'Atlantique selon les règlements édictés de temps à autre par le Gouverneur en conseil.

En 1939 les versements sont effectués sur la base suivante:

Aux propriétaires de navires de pêche ayant droit à cette prime, $1 par tonne enregistrée; avec un maximum de $80 par navire.
A chaque membre de l'équipage ayant droit à la prime, $6.20.
Aux propriétaires de barques mesurant au moins 12 pieds de quille, $1 par embarcation.
A chaque pêcheur d'une barque ayant droit à une prime, $5.85.

Le montant payé en 1939 est de $159,993.85, réparti comme suit:

A 646 propriétaires de navires et leurs équipages.....$ 32,356.55
A 11,466 barques et leurs équipages.....$127,637.30

Commerce Extérieur

Exportations.—La valeur totale du poisson et des produits poissonniers canadiens exportés en 1939 est de $29,641,232, augmentation de $2,097,552 ou 7 p.c. sur 1938. Par ordre de valeur, les principaux item sont le saumon en boîte ($8,627,557), le homard frais ($2,011,163), le saumon frais et gelé ($1,664,176), le corégone frais ou gelé ($1,444,331), le homard en boîte ($1,431,294), la morue séchée ($1,241,712) et le flétan ($1,203,135). Le Royaume-Uni et les Etats-Unis prennent ensemble 75 p.c. des exportations, soit $8,718,246 ou 29 p.c. du total dans un cas et $13,661,128 ou 46 p.c. dans l'autre. Comparativement à l'année précédente, les exportations au Royaume-Uni montrent une augmentation de $1,837,585 ou 27 p.c. et celles aux Etats-Unis, une augmentation de $947,309 ou de 7 p.c.

Importations.—La valeur du poisson et des produits poissonniers importés au Canada pour consommation en 1939 est de $3,438,644 contre $3,036,227 en 1938. Les principaux item sont: sardines, en boîte, principalement de Norvège; thon, préparé ou en conserves, des Antilles britanniques et du Japon; et saumon frais, de Terre-Neuve et d'Alaska.

Le tableau suivant donne la valeur des exportations et des importations de 1926 à 1939.

14. Valeur des exportations er des importations de poisson et de produits poissonniers, années terminées le 31 décembre, 1926 à 1939

Année	Exportations	Importations	Année	Exportations	Importations
	$	$		$	$
1926	37,890,545	3,045,838	1933	20,223,610	1,694,325
1927	34,814,448	3,768,901	1934	22,497,135	2,121,762

1931	25,848,585	2,653,894	1938	27,543,680	3,036,227
1932	18,752,107	1,862,337	1939	29,641,232	3,438,644

Revue rétrospective

Les cinq tableaux suivants présentent une revue rétrospective de l'industrie de la pêche au Canada pendant les années passées. En ce qui concerne la production, les données sont établies par province et par année et remontent jusqu'à 1870. Quant au nombre et à la valeur des navires, barques, etc., les chiffres partent de l'année 1880; le personnel qu'emploie cette industrie est révélé depuis 1895.

15. Revue rétrospective—(a) Valeur totale des pêcheries dans les différentes provinces du Canada pour les années 1870, 1875 et 1880 jusqu'à 1939, inclusivement

19. Tableau de conversion de la pesée du poisson

Dans ce tableau, dans le cas de la morue, de l'églefin, de la merluche et du brosmius, du merlan et du flétan (littoral de l'Atlantique) on entend par poisson frais le poisson dont on a enlevé les entrailles et non la tête. Le poids du flétan sur la côte du Pacifique est pris après l'enlèvement de la tête et des entrailles. Dans le cas de l'espadon et du thon le poids comprend le poisson après l'enlèvement de la tête, de la queue et des entrailles. Pour tous les autres poissons le terme "poisson frais" signifie le poisson tel qu'il est sorti de l'eau.

MORUE, ÉGLEFIN, MERLUCHE ET BROSMIUS OU MERLAN

300 lb de poisson frais donnent 1 qtl de filets frais.
160 lb de poisson frais donnent une caisse de poisson en boîte.
200 lb de poisson frais donnent 1 qtl de poisson salé vert.
300 lb de poisson frais donnent 1 qtl de filets fumés.
200 lb de poisson frais donnent 1 qtl de poisson fumé.
300 lb de poisson frais donnent 1 qtl de poisson séché.
400 lb de poisson frais donnent 1 qtl de poisson désossé.

HARENG

70 lb de poisson frais donnent une caisse de hareng en boîte.
200 lb de poisson frais donnent 1 qtl de hareng fumé.
300 lb de poisson frais donnent un baril de hareng saumuré.
200 lb de poisson frais donnent un baril de boëtte (fraîche ou salée).
200 lb de poisson frais donnent un baril d'engrais.
125 lb de poisson frais donnent 1 qtl de hareng salé à sec.

MAQUEREAU OU ALOSE

70 lb de poisson frais donnent une caisse de poisson en boîte.
300 lb de poisson frais donnent un baril de poisson saumuré.
400 lb de poisson frais donnent un baril de filets de maquereau salés.

SARDINE

Un baril de poisson frais donne de 4 à 5 caisses de poisson en boîte.
Une caisse de 25 livres équivaut à 100 boîtes de $\frac{1}{4}$ de lb chacune.

PILCHARD

70 lb de poisson frais donnent une caisse de poisson en boîte.
200 lb de poisson frais donnent un baril de boëtte.

GASPAROT

200 lb de poisson frais donnent 1 qtl de poisson fumé.
275 lb de poisson frais donnent un baril de poisson saumuré.

SAUMON

80 lb de poisson frais (Pacifique) donnent une caisse de 48 lb de poisson en boîte.
70 lb de poisson frais (Atlantique) donnent une caisse de 48 lb de poisson en boîte.
170 lb de poisson frais donnent 1 qtl de poisson fumé.
125 lb de poisson frais donnent 1 qtl de poisson salé à sec.
150 lb de poisson frais donnent 1 qtl de poisson fumé doux.
150 lb de poisson frais donnent 1 qtl de poisson saumuré.

THON

100 lb de poisson frais donnent une caisse de poisson en boîte.

COQUES

Littoral de l'Atlantique—
200 lb de coques fraîches donnent une caisse de coques en boîte (48 boîtes de 5 onces de chair chacune).

Littoral du Pacifique—
Couteaux.—80 lb de chair fraîche donnent une caisse de chair en boîte (48 boîtes de 6 onces de chair chacune).
Praires du Pacifique, amandes de mer, etc.—150 lb de chair fraîche donnent une caisse de chair en boîte. (48 boîtes de 6 onces de chair chacune.)

CRABES

Littoral du Pacifique—
100 lb de crabe frais (environ 6 douzaines) donnent une caisse de chair en boîte (48 boîtes de $6\frac{1}{2}$ onces de chair égouttée chacune).

HOMARD

200 lb de homard frais donnent une caisse de homard en boîte (48 boîtes de 12 onces de chair chacune).
500 lb de homard frais donnent 1 qtl de chair.
